ELEVENTH INAUGURAL ADDRESS

0F

HON. CHARLES S. ASHLEY

Mayor of New Bedford

At the Inauguration of the City Government January Second, Nineteen Hundred and Five

NEW BEDFORD:
THE A.E.COFFIN PRESS, CITY PRINTERS,
1905.

ELEVENTH INAUGURAL ADDRESS OF HON. CHARLES S. ASHLEY

Gentlemen of the City Council:

Custom has established the inauguration ceremonies as an appropriate opportunity for the chief executive to address the incoming city government.

It is an occasion on which the mayor may lay before you statements of the city's condition and outline topics which may be expected to engage your attention.

It is permissible also for me to add my own comment with reference to existing conditions and to express my views concerning the municipal requirements.

You will find that your immediate predecessors in office have met the problems of a growing city with judgment and intelligence.

The departments are in excellent working condition and the executive heads are efficient and able.

The routine public business has been carefully and properly dispatched.

It is my belief that the confidence so generously expressed in our civic stability is well justified. It is our duty to maintain the established standard and not to permit it to be impaired.

You will discover that many of the situations requiring solution at your hands are directly associated with our extraordinary growth and rapid development.

While the usual and ordinary municipal business presents perplexities and problems, the demands made upon us for the immediate future require thoughtful consideration and treatment.

Your industrious management of situations that are vitally real is needed for the proper administration of the public affairs.

FINANCIAL.

TAXES.

The tax levy for 1904, was as follows:

| State tax | \$49,625.00 | |
|-----------------------------------|--------------|----------------|
| State armory tax | 8,777.22 | |
| County tax | 104,226.58 | |
| City appropriations | 1,089,734.00 | |
| Overlay | 4,323.53 | \$1,256,686.33 |
| Collections | | 1,165,092.75 |
| Unpaid, December 1, 1904 | | \$91,593.58 |
| Taxes of 1903, unpaid | | 24,615.26 |
| Total unpaid taxes, 1903 and 1904 | | \$116,208.84 |

Of the taxes of 1904, 7 3–10 per cent. now remain unpaid.

A large portion of the taxes of 1903, (\$24,615.26), now remaining unpaid, being for real estate, will be available on or before April 1, 1905.

Received from State Treasurer:

| Corporation taxes, 1904 | \$56,234.78 | |
|--------------------------|-------------|-------------|
| Bank taxes, non-resident | 2,930.29 | |
| Street railway tax | 13,947.31 | \$73,112.38 |

The amount received in 1903 for corporation taxes due from the State, was \$74,166.04; for 1904, \$56,234.78, a loss of income to the city of

\$17,931.26, due to the change in the corporation laws of the Legislature, Chapter 261, Acts of 1904.

RECEIPTS AND EXPENDITURES.

The receipts and expenditures for the year, including balance of cash in the Treasury, Dec. 1, 1903, have been as follows:

| Balance, December 1, 1903 | | \$126,880.66 |
|--|--------------|----------------|
| Receipts for taxes # | 1,055,255.99 | |
| Temporary loans | 1,435,000.00 | |
| Issue of bonds | 300,000.00 | |
| From Commissioners of Sinking Funds, | | |
| maturing bonds | 89,000.00 | |
| From water rates, water debt | 35,000.00 | |
| From wharf rates, applied to debt | 3,283.00 | |
| From Water Registrar, rates, etc | 143,205.25 | |
| Interest on Trust Funds | 6,786.00 | |
| Deg licenses | 3,132.65 | |
| From sundry sources, liquor licenses, etc. | 272,318.51 | \$3,342,981.40 |
| Total receipts, including balance Decem- | | |
| ber 1, 1903 | | \$3,469,862 06 |
| Expenditures, as per warrants of the | | |
| Mayor | | 3,433,217.86 |
| Balance of cash December 9, 1904 | | \$36,644.20 |
| | | |

BONDED DEBT.

| Gross debt | | \$4,102,000.00 |
|--|----------------|-----------------------------|
| Exemptions authorized: | | |
| Water loans | \$1,538,000.00 | |
| Park loans | 128,000.00 | |
| Wharf loans | 82,000.00 | |
| School bonds | 100,000.00 | |
| Municipal sinking funds | 883,541.37 | 2,731,541.37 |
| Net municipal debt | | \$1,370,458.63 |
| Sinking funds, gross | | \$1,183,856.90 |
| Deductions: | | |
| Water loan sinking funds | \$268,181.79 | |
| Park loan sinking funds | 16,644.89 | |
| Wharf loan sinking funds | 15,488.85 | 3 00,31 5 .53 |
| Net municipal sinking funds, as above | | \$883,541.37 |
| Average tax value for the years 1902, | | |
| 1903 and 1904 | | \$62,580,770.00 |
| Two and one half per cent. of average | | |
| valuation | | \$1,564,519.25 |
| Net municipal debt as above | | 1,370,458.63 |
| Short of debt limit at close of the year | | \$194,060.62 |

ESTIMATED BORROWING CAPACITY FOR 1905.

| Borrowing capacity, December 1, 1904 | | \$194,060.62 |
|---|-------------|----------------------|
| Municipal bonds to mature in 1905: | | |
| Improvements, 6s | \$10,000.00 | |
| Improvements, 4s | 24,000.00 | |
| Estimated increase in sinking funds | 147,990.00 | |
| - | | 181,990.00 |
| | | \$376,050.62 |
| Less bonds to mature April 1, 1905, to be | | |
| paid from sinking funds | | 24,000.00 |
| Estimated borrowing capacity December | | |
| 1, 1905 | | \$ 352,050.62 |
| Amount due on account of bonded debt | | |
| for 1905, is as follows: | | |
| Water bonds, 7s | \$10,000.00 | |
| Water bonds, 6s | 20,000.00 | |
| Improvement bonds, 6s | 10,000.00 | |
| Improvement bonds, 4s | 24,000.00 | \$64,000.00 |

To 1910 inclusive, all high rate bonds ranging from six to seven per cent. per annum, amounting in the aggregate to \$230,000.00 payable from general taxation, will have been provided for, the balance of our indebtedness being already provided for by sinking funds authorized under orders of the City Council, the sinking funds accumulated, as before stated, amounting to the sum of \$1,183,856.90.

SPECIAL APPROPRIATIONS.

| The special appropriations are as follow | VS | | |
|--|----|--|--|
|--|----|--|--|

| 1903 | \$60,000.00 151,794.44 412,665.24 | \$624,459.68 |
|-------------------------------|---|--------------|
| Less loan for high school lot | \$60,000.00 23,772.87 | |
| | 106,608.84 36,644.20 | 227,025.91 |

Net special appropriations to be provided for except the sum expended for new high school, authorized beyond the debt limit.....

\$397,433.77

SCHOOLS.

Notwithstanding the fact that our school buildings are well appointed and the teachers and methods employed leave little to be desired, it is very much in evidence that our facilities are entirely inadequate.

The following extracts from a communication of Wm. E. Hatch, Superintendent of Schools, disclose the instances wherein the deficiency is most apparent:

"There are now five classes with 200 children in rented quarters south of Russell street, two in portable schoolhouses, and two in attic rooms separated from the grammar school to which they belong. There are four classes in rented rooms north of Cedar Grove street, and other rooms are crowded. With the completion of the two new buildings in process of construction, those sections will be relieved.

"It is in the center belt of the city, extending from the Cannonville school to the schools on Pleasant street, that relief is needed. These schools are now crowded to the limit and I do not see what will be done next fall. I think it will be necessary to refuse entrance even to the children who should enter in January. Certainly there will be no room for new applicants in some of the schools. We need the present high school building badly for the Middle street grammar school, and the present Middle street grammar building to relieve the congested primary schools in that district."

In the matter of the High school the city is admittedly far behind the times. The need of a new modern building is imperative. The painstaking thought of the disinterested educational committee that is responsible for the excellent plans that have been procured for the city, merits appreciation and action. Upon this matter Mr. Hatch has written as follows:

"I cannot urge too strongly the need of the School Department for this building. I have stated some reasons why a new high school building is demanded apart from the High school itself. In addition to those, I desire to say in the most emphatic terms, that the present building fails to meet the demands of a modern high school. The assembly hall has been cut up to make recitation rooms; the principal's room has been taken as a recitation room, forcing him to occupy a small dressing room for an office; teachers and children are compelled to work in badly lighted and ventilated basement rooms, which are used as laboratories. These rooms in addition are too small for the requirements made upon them. The present building does not admit of manual training instruction, which is required by the Statutes of the Commonwealth; it has no gymnasium for the physical training of the boys and girls; in these and other respects it is entirely inadequate and must retard the growth of the High school in efficiency, and, I believe, in numbers."

It is in every way desirable that no backward policy be adopted towards our schools and the ever increasing number of pupils.

STREETS.

There can be no question of the surpassing importance of the proper building and maintenance of good streets.

New Bedford feels a justified pride in thoroughfares now conceded to be worthy of comparison with any other.

At the same time it is a matter of growing moment that they be so constructed as to endure for the longest period.

I believe that our citizens look to you to be zealous in their care, extension and improvement.

ENGINEERING.

The City Engineer reminds me that there is no suitable provision in his present office for the protection of the valuable plans and records of his department.

POLICE.

The proper policing of the city has required the maintenance of a competent police force which may be recruited to the best advantage by reason of the Civil Service provisions and the establishment of the reserve force. It is a matter of general pride that this community is noted for its good order and freedom from crime. Statistics which I have in my possession, show that the number of felonies in New Bedford is the smallest in any Massachusetts city of relative size.

FIRE DEPARTMENT.

The growth of the city and the increase of building operations has resulted in the general extension of fire protection.

There can be no doubt that public sentiment favors the most searching attention to all methods that will insure the continued ability of the Fire Department.

WATER WORKS.

I am informed that our extensive water system has attracted the attention of the rest of the New England cities, through our freedom from inconvenience during the present drought.

It is a matter of public satisfaction that we are guaranteed an unfailing supply of water.

Superintendent Coggeshall informs me that a requirement of the near future is an additional

main from the High Hill reservoir to the city distributing system.

BOARD OF ASSESSORS.

The Assessors, in a communication of December 14th, point out that under the comprehensive system employed in their office, an increased working force is required.

REGISTRARS OF VOTERS.

Below is a statement from the Board of Registrars of Voters in which appears the number of voters accredited to each precinct and ward.

The Board points out the necessity for a change of ward lines to conform to the provisions of the law.

Action will have to be taken upon this communication, which is as follows:

REGISTERED VOTERS, BY WARDS AND PRECINCTS.

The number of registered voters in the city at this time is as follows:

WARD ONE.

| Precinct A | 693 |
|------------|-------|
| Precinct 1 | 769 |
| Precinct 2 | 692 |
| | 2,154 |

WARD TWO.

| | | | *************************************** | 1.638 |
|----------|---|--|---|-------|
| Precinct | 4 | | 951 | |
| Precinct | 3 | | 687 | |

WARD THREE.

| | 1,374 |
|------------|-------|
| Precinct 6 | . 627 |
| Precinct 5 | 747 |

WARD FOUR.

| Precinct 7 | 655 |
|------------|-------|
| Precinct 8 | 656 |
| | 1,511 |

WARD FIVE.

| Precinct | 9 | . 717 | |
|----------|----|---|-------|
| Precinct | 10 | 800 | |
| | | *************************************** | 1,517 |

WARD SIX.

| Precinct 11 | | 924 |
|-------------|---|-------|
| Precinct 12 | : | 985 |
| | | 1,909 |

| Ward | One | contains2,154 | voters |
|------|-------|----------------|--------|
| Ward | Two | contains 1,638 | voters |
| Ward | Three | contains 1,374 | voters |
| Ward | Four | contains 1,511 | voters |
| Ward | Five | contains 1,517 | voters |
| Ward | Six | contains 1.909 | voters |

Wards One and Six contain a number of voters out of all proportion to the other wards.

It is very probable that unless the ward and precinct lines are changed this year, the next registration will make some of the precincts contain more than the 1,000 voters allowed by law.

The ward and precinct lines were last changed in 1895, and since that time the growth in Ward One has been so great that in 1902 another precinct had to be made to comply with the law.

EXTRACT FROM REVISED LAWS, CHAPTER II.

"Section 161. A city may, in the year nineteen hundred and five, and in every tenth year thereafter, before the first day of May, by vote of its City Council, make a new division of its territory into such number of wards as may be fixed by law. The boundaries of such wards shall be so arranged that the wards shall contain, as nearly as can be ascertained and as may be consistant with well defined limits to each ward, an equal number of voters."

PARKS.

Our park system, though yet but little developed, affords a great measure of healthful recreation for the people.

It is conceded that nothing in the municipal control does more for the general benefit of the populace of all ages than well appointed parks. Public approval will sustain none but the wisest and most careful attention to this very important subject.

FREE PUBLIC LIBRARY.

It is a matter of great regret that the library, while well equipped with books, suffers from nearly every inconvenience that can be suggested. The magnificent bequest of Mrs. Sarah E. Potter, which is restricted to the purchase of books and similar equipment, emphasizes the necessity for a new building, which I trust may, in some way, before the lapse of many years, be provided.

BOARD OF HEALTH.

There has been no recurrence of contagious epidemic, which has menaced the public health in former years, and the work of the Board has been confined to the duties created by the statutes and ordinances.

It needs no word of mine to remind you that the working of this Board is of eminent importance and benefit. There is every reason to believe that the recent award of the garbage contract will result in the most scientific effort to satisfactorily handle the city's offal and refuse yet attempted.

CEMETERY BOARD.

The department has handled the work intrusted to its care with conspicuous success. The cemeteries have been practically beautified.

The Pine Grove cemetery is deemed by the Board to be worthy of further development, while there is yet a chance to procure adjacent land. It is the desire to obtain an adjoining tract and they urge its purchase without delay.

OVERSEERS OF THE POOR.

The requirements of the Poor Department are of course continuing and necessary. The relief of the unfortunate and indigent will have to be provided.

CONCLUSION.

The further acts necessary to effect your organization can best be performed in your respective rooms, to which you are now invited to adjourn.

CITY OF NEW BEDFORD,

IN BOARD OF ALDERMEN,

January 2, 1905.

WARD LINES.

CITY OF NEW BEDFORD, IN BOARD OF ALDERMEN, April 25, 1895.

Ordered, That in conformity with section 96 of chapter 417 of the Acts of the Legislature of the Commonwealth, in the year 1893, the several wards of the city, until the first day of May, 1895, and until otherwise ordered, be and they are hereby divided and established according to the following described lines, to take effect January 1, 1896:

Ward One. All that portion of the city lying north of a line beginning at the river, and drawn through the centre of Linden street to Ashland street, thence through the centre of Ashland street to Durfee street, and thence through the centre of Durfee street to the west line of the city, will constitute Ward One.

Ward Two. All that portion of the city lying between a line drawn from the river through the centre of Linden street to Ashland street, thence through the centre of Ashland street to Durfee street, thence through the centre of Durfee street to the west line of the city, and a line drawn from the river through the centre of Campbell street to County street, thence through the centre of County street to Sycamore street, thence through the centre of Sycamore street to Cedar street, thence through the centre of Cedar street to Smith street, and thence through the centre of Smith street to the west line of the city, will constitute Ward Two.

Ward Three. All that portion of the city lying between a line drawn from the river through the centre of Campbell street to County street, thence through the centre of County street to Sycamore street, thence through the centre of Sycamore street to Cedar street, thence through the centre of Cedar street to Smith street, thence through the centre of Smith street to the west line of the city, and a line drawn from the river through the centre of High street to County street, thence through the centre of County street to Kempton street, thence through the centre of Kempton street to the west line of the city, will constitute Ward Three.

Ward Four. All that portion of the city lying between a line drawn from the river through the centre of High street to County street, thence through the centre of County street to Kempton street, thence through the centre of Kempton street to the west line of the city, and a line drawn from the river through the centre of School street to County street, thence through the centre of County street to Arnold street, and thence through the Centre of Arnold street to the west line of the city, including Fish and Pope's Islands, will constitute Ward Four.

Ward Five. All that portion of the city lying between a line drawn from the river through the centre of School street to County street, thence through the centre of County street to Arnold street, thence through the centre of Arnold street to the west line of the city, and a line drawn from the river through the centre of Grinnell street to Fourth street, thence through the centre of Fourth street to Washington street, thence through the centre of Washington street to Dartmouth street, thence through the centre of Dartmouth street to Grape street, thence through the centre of Oak and Grape streets to Rockdale avenue, thence through the centre of Rockdale avenue to Allen street, and thence through the centre of Allen street to the west line of the city, will constitute Ward Five.

Ward Six. All that portion of the city lying south of a line drawn from the river through the centre of Grinnell street to Fourth street, thence through the centre of Fourth street to Washington street, thence through the centre of Washington street to Dartmouth street, thence through the centre of Dartmouth street to Oak street, thence through the centre of Oak and Grape streets to Rockdale avenue, thence through the centre of Rockdale avenue to Allen street, and thence through the centre of Allen street to the west line of the city, including Palmer's Island, will constitute Ward Six.

Adopted in concurrence.

Approved by the Mayor, April 27, 1895.

VOTING PRECINCTS.

As designated and established by the Mayor and Aldermen, under the provisions of chapter 417 of the Acts of the Legislature of 1893, and the provisions of chapter 11 of the Revised Laws of the Commonwealth, to take effect Jan. 1, 1902.

Ordered, That the several wards of the city be, and they are hereby divided into voting precincts for the holding of all meetings for the choice of all officers who are elective by the people, and that the dividing lines of said precincts be as hereinafter defined.

IN WARD ONE.

All that portion of said ward lying north and east of a line drawn from a point in the channel of the Acushnet river formed by the extension of a line through the centre of Sawyer street, thence westerly in said extended line, and in the centre of Sawyer street to the easterly line of the New York, New Haven & Hartford railroad; then northerly in the easterly line of said railroad to the northerly boundary line of the city, shall be known as Precinct "A."

All that portion of said ward lying east and south of a line beginning at a point in the centre of Sawyer street, at the east line of the New York, New Haven & Hartford railroad, thence westerly in the centre of Sawyer street to its intersection with a line formed by the extension of a line through the centre of Purchase street; thence southerly in the centre of Purchase street to the centre of Weld street; thence westerly in the centre of Weld street to the centre of State street to the centre of Linden street, shall be known as Precinct One.

All that portion of said ward lying west and north of a line beginning at a point in the centre of Linden street at its intersection with a line formed by the extension of a line through the centre of State street; thence northerly through the centre of State street to the centre of Weld street; thence easterly in the centre of Weld street to the centre of Purchase street; thence northerly in the centre of Purchase street to the centre of Sawyer street; and thence easterly in the centre of Sawyer street to the easterly line of the New York, New Haven & Hartford railroad; thence northerly in the easterly line of the New York, New Haven & Hartford railroad to the northerly boundary line of the city, shall be known as Precinct Two.

IN WARD TWO.

Said line shall begin at a point formed by the extension of a line through the centre of County street at its intersection with Linden street, thence south through the centre of County street to the centre of Locust street, thence through the centre of Locust street to the centre of Chestnut street, thence south through the centre of Chestnut street to a point in said Chestnut street at its intersection with a line formed by the extension of a line through the centre of Sycamore street. The precincts in said ward being further defined as follows: All that part of said ward lying east of said division line shall be and is hereby made a voting precinct to be known as Precinct Number Three; all that part of said ward lying west of said division line shall be and is hereby made a voting precinct to be known as Precinct Number Four.

IN WARD THREE.

Said line shall begin at a point in the centre of County street intersecting with a line formed by the extension of a line through the centre of Sycamore street, thence south through the centre of County street to its intersection with a line formed by the extension of a line through the centre of High street. And is further defined as follows: All that portion of said ward lying east of said division line as drawn through the centre of County street shall be and is hereby made a voting precinct to be known as Precinct Number Five; all that portion west of said division line as drawn through the centre of County street shall be and is hereby made a voting precinct to be known as Precinct Number Six.

IN WARD FOUR.

Said line shall begin at a point in the centre of Kempton street at its intersection with a line formed by the extension of a line through the centre of Summer street, thence south through the centre of Summer street to its intersection with a line formed by the extension of a line through the centre of Elm street, thence west through the centre of Elm street to the centre of Cottage street, thence south in the centre of Cottage street to a point at its intersection with a line formed by the extension of a line through the centre of Arnold street. And is further defined as follows: All that portion of said ward lying east of said division line shall be and is hereby made a voting precinct to be known as Precinct Number Seven; all that portion lying west of said division line is hereby made a voting precinct to be known as Precinct Number Eight.

IN WARD FIVE.

Said line shall begin at a point in the centre of County street and in the centre of School street, thence south in the centre of County street to the centre of Russell street, thence east in the centre of Russell street to the centre of South Sixth street, thence south in the centre of South Sixth street to its intersection with the centre of County street, thence in the centre of County street to its intersection with a line drawn through the centre of Washington street. The precincts in said ward being further defined are as follows: All that portion of said ward lying east of said division line shall be and is hereby made a voting precinct to be known as Precinct Number Nine; and all that part of said ward lying west of said division line shall be and is hereby made a voting precinct to be known as Precinct Number Ten.

IN WARD SIX.

Said line shall begin at a point in the centre of Fourth street at its intersection with the centre of Grinnell street, thence south in the centre of Fourth street to the centre of Rivet street, thence westerly in the centre of Rivet street to the centre of County street, thence southerly in the centre of County street to Clark's Cove, so called. The precincts in said ward being further defined as follows: All that portion of said ward lying east of said division line shall be and is hereby made a voting precinct to be known as Precinct Number Eleven; all that portion of said ward lying west of said division line shall be and is hereby made a voting precinct to be known as Precinct Number Twelve.

Adopted.

REPORT.

CITY OF NEW BEDFORD,
OFFICE OF THE NEW BEDFORD WATER BOARD,
DECEMBER 30th, 1904.

To the City Council of the City of New Bedford:

Gentlemen: — The New Bedford Water Board herewith presents its thirty fifth annual report.

At the present time we have in storage in Great and Little Quittacas Ponds, a supply of water adequate to meet all demands of our consumers for many months to come. We emphasize this fact, as a drought of unusual severity prevails at the present time throughout the whole of New England. Suffering and inconvenience is now in general evidence through insufficient sources of water supply. In bygone years, we, too, have experienced the unwelcome troubles due to shortage in supply, when the dry periods came to us. This experience was valuable in making the plans for the new supply. We did not provide simply for tomorrow; but with the idea that we might be called upon to provide amply for a much larger community through trying conditions of drought. This anticipation we are able to meet, and our citizens are to be congratulated upon being able to enjoy the satisfactory possession of a supply excellent in quality and ample in quantity.

The rate of consumption remains substantially the same as that of last year. Some months show an increase, others a decrease. As a whole, it is in the direction of a slight increase. We feel that our words of last year are appropriate to repeat at this time. We then said: have no concern regarding the lack of supply at the pumps for many years to come, but we do feel that this gradual increase is unduly hastening the day when the placing of an additional main from High Hill reservoir to the city will become an imperative demand. This means a substantial outlay. We are fully persuaded that a large proportion of each daily supply is not used legitimately. Large volumes are allowed to run to waste. There appear to be many takers who fail to appreciate that the city water pumped into the reservoir, conducted to the city and delivered into the premises of the takers has a value; that every gallon wasted represents the useless consumption of a certain amount of coal, and that this gradual increase will finally compel the large outlay alluded to above. Whatever can be done to confine the consumption within its present limits is a move in the right direction."

Probably the most difficult problem with which water departments have to contend is the keeping of the large body of water which is held in storage free from a disagreable taste and odor. There is no section which does not suffer more or less from this trouble. The cause can be traced to a vegetable growth which appears and thrives in the water through an inexplicable cause. Hundreds of water supplies are ruined for domestic use through this cause. This is the growth known as "Algae." They are a flowerless plant usually of a blue green color. There are hundreds of different species, but only a few impart an offensive taste and smell to the water. The organism known as "Anabena" is particularly dreaded. When once it appears, the rapidity with which it will multiply, is really marvellous. An immense amount of time has

been given and large sums of money have been expended upon investigations to find a way to counteract this condition, but thus far without any marked success. It is known that "Algae" will not grow in the dark, but it is of course impractical to roof over our large ponds.

Within the last year or two, it has been discovered that sulphate of copper (blue vitrol) dissolved in the water in minute quantities, will quickly destroy the "Anabena." It remains for the scientist to determine whether or not this treatment will render the water unfit for domestic use. "Anabena" frequently manifested itself in the Long Plain Storing reservoir, which was a part of the old water supply system, to the annoyance of the water takers. The State Board of Health is now taking advantage of the non use of this reservoir. It has been giving the water a critical study during the past season. Every week samples have been sent to the laboratory of the Board, for examination. Now that it has obtained a satisfactory history of this water, it proposes to submit this body of water to experimental tests with copper sulphate during the coming season. The result will be watched with great interest, and it is hoped it may demonstrate the means whereby a source of much annoyance may be overcome.

On January 14th, George H. Hedge presented his resignation as a member of this Board, to the City Council, which was accepted by them.

On June 24th, William E. Smith was elected a member of this Board for the term to end in June, 1907.

On June 24th, Lettice R. Washburn was elected a member of this Board for the term to end in June, 1905.

On January 19th, Gilbert B. Borden, jr., was appointed to the position of inspector in this department for the probationary term of six months, at a salary of \$2.00 per day. On December 30th, this appointment was made permanent.

On January 19th, Clarence P. Jenney was appointed to the position of inspector in this department for the probationary term of six months, at a salary of \$2.00 per day.

On February 20th, Alonzo W. Spooner was appointed to the position of inspector in this department for the probationary term of six months, at a salary of \$2.00 per day. On December 30th, this appointment was made permanent.

On March 5th, Clarence P. Jenney resigned his position as inspector in this department, the same to take effect on March 5th.

On March 3, Frank M. Hamlin was appointed to the position of inspector in this department for the probationary term of six months at a salary of \$2.00 per day. On December 30th, this appointment was made permanent.

Thirteen thousand, seven hundred fifty-eight feet of main distributing pipe have been laid, and two thousand three hundred fifty-eight feet of that previously laid has been removed. The total amount of main distribution pipe now in use, four inch and upwards in size, is 102.2856 miles.

The number of service pipes has been increased 262. The total number now in use is 10,166.

One hundred ninety-one meters have been added during the year. The total number now in use is 2,145.

Forty-six petitions for extension of main distribution pipe have been presented to us. Of this amount forty-two have been granted.

On February 23rd, a contract was signed with the Warren Foundry & Machine Co., of Phillipsburg, New Jersey, for 228 tons of cast iron pipe and special castings. The consideration was \$23.50 per ton of 2,000 lbs. for straight bell and spigot pipe, and \$50.00 per ton of 2,000 lbs. for special castings. These prices include delivery on wharf in this city.

Shortly after the presidential election in November, it was evident that cast iron was to rapidly advance in price. The Board decided it wise to immediately take advantage of the prices then quoted for spring delivery of the stock needed for the operation of next year. Accordingly, on December 8th, a contract was signed with the Warren Foundry & Machine Co., of Phillipsburg, New Jersey, for 239 tons of cast iron pipe and special castings. The consideration was \$25.35 per ton of 2,000 lbs. for straight bell and spigot pipe, and \$55.00 per ton of 2,000 lbs. for special castings. These prices include delivery on wharf in this city in April next.

On May 11th, a contract was executed with George W. Townsend, of Boston, for the laying of a six inch flexible jointed pipe across the channel from the abutment of the New Bedford and Fairhaven bridge on the east side of Fish Island, to the abutment of said bridge on the west side of Pope's Island.

On June 20th, an agreement was made with John Duff, Esq., which provides a right of way to a strip of land, controlled by him, located on the east side of Fish Island, next adjacent to the south side of the New Bedford and Fairhaven bridge, for the purpose of maintaining a water pipe therein. In consideration of the privilege granted, we agreed to erect and maintain a fire hydrant upon this land to be used by him for the protection of his property in case of fire.

On July 15th, a contract was signed by the fuel committee of the City Council, with the Garfield & Proctor Coal Co., for 1,400 gross tons of George's Creek Cumberland coal, to be delivered upon cars at Braley's Station, for use at the Little Quittacas Pumping Station. Thirty tons, same quality coal, to be delivered at the Purchase Street Pumping station, and eighteen gross tons, same quality coal, to be delivered at workshop on North Water street. Consideration, \$5.50 per gross ton delivered.

The following is a brief statement of the financial operations of the past year:

| Balance, Dec. 1, 1903, | \$4,696.37 |
|-------------------------------------|--------------|
| Receipts for the year, all sources, | 155,205 25 |
| | \$159 901.62 |

The charges have been as follows:

| Expenditures for management and repairs, | \$128,021.16 |
|--|--------------|
| Expenditures for extensions, | 30,338.37 |
| | \$158,359.53 |
| Which leaves a balance to the credit of the works on | |
| the books of the City Treasurer, Dec. 1, 1904, | \$1,542.09 |
| | |

The figures given below are formulated to indicate the amount raised by tax levy for the current year to provide for deficit of the Water Works account.

DEBITS.

| Balance Dec. 1, 1903, | | \$4,696.37 |
|--|--------------|--------------|
| Receipts from water rates, | \$129,434.89 | |
| Receipts from other sources, | 13,770.36 | 143,205.25 |
| General appropriation for use of water | | |
| for public purposes, | | 12,000.00 |
| General appropriation from tax levy to | | |
| make up deficit, | | \$67,480.00 |
| | | \$227,381.62 |

CREDITS.

| Management and repairs, less interest, | | |
|--|-------------|--------------|
| bonds paid, and sinking funds, | \$49,021.16 | |
| Extension of works, | 30,338.37 | |
| Interest on bonds, general | | |
| appropriations, \$61,480.00 | 0 | |
| Interest on Sylvia Ann How- | | |
| land fund, general appro- | | |
| priations, 6,000.00 |) | |
| Interest paid from water rates, 5,000.00 |) | |
| Bonds paid from water rates, 30,000.00 | 102,480.00 | |
| Sinking funds (further supply) | | |
| paid from water rates, | 40,000.00 | |
| Sinking funds, paid from water rates, | 4,000.00 | |
| Balance, Dec. 1, 1904, | 1,542.09 | \$227,381.62 |

The actual outlay for the construction of these works, exclusive of debt, interest, and management and repair account, is \$3,261,678.78.

Accompanying this report and a part of it, are the reports of the Water Registrar and of the Superintendent, which appear in the following pages.

Respectfully submitted,

CHAS. S. ASHLEY, President,
SAMUEL HIGHAM,
LETTICE R. WASHBURN,
ZEPHANIAH W. PEASE,
WILLIAM E. SMITH,

New Bedford
Water Board.

REPORT OF WATER REGISTRAR.

CITY OF NEW BEDFORD, WATER REGISTRAR'S OFFICE, December 1st, 1904.

To the New Bedford Water Board:

SUPERINTENDENT'S REPORT.

NEW BEDFORD WATER WORKS, SUPERINTENDENT'S OFFICE, December 5th, 1904.

To the New Bedford Water Board:

GENTLEMEN: — I herewith present the thirty-fifth annual report of the Superintendent for the year ending December 1st, 1904.

Tables are herewith inserted, showing rainfall record at the Little Quittacas Pumping Station and Storing Reservoir at Long Plain These are followed by a series of tables, showing result of chemical analysis of samples of water taken from different localities. The latter tables are kindly supplied by Chief Engineer Goodnough of the Massachusetts State Board of Health.

These samples were collected from the Old Storing Reservoir.

At this date much anxiety exists throughout New England as the result of the serious drought now prevalent in every direction. For many weeks the precipitation has been very minute. Far below the average. Wells and springs have either become very low or have been entirely exhausted. Swamps and streams are in a similar condition, and the storing basin of many a supply in the territory named has been reduced to a very low ebb. Added to this is the unwelcome fact that winter weather has materialized in good earnest, and that with the swamps unfilled. The average temperature of November was the lowest for many a year, and the ground has now become well frozen. The now limited supply of a number of our sister cities has compelled the officials connected therewith to resort to extreme measures in the prevention of wastage. All this may indeed sound strange to this community, which continues to enjoy a bountiful supply without any restraint. But the fact is this. The present daily consumption of many a city and town now suffering for lack of supply, really passed its safe supply limit many years ago. They are in a condition similar to that which we of this city found ourselves previous to the introduction of the Quittacas Supply. Our experience teaches that the day finally comes when governments are compelled to recognize the fact that water plants well balanced in every detail for the day of its construction may in a term of years finally become totally unfit to meet the requirements of an enlarged condition. When we were brought face to face with this situation, involving the expenditure of a large amount of money, we succeeded in satisfactorily solving the problem. As the result, we now have ample amounts in storage of that, the use of which many cities and towns are now compelled to restrain. They, too, must heed the experience through which they are now passing, if they

wish a bettered condition in the future. New supplies and enlarged capacities compel heavy expenditures, but that is the penalty that must be paid to insure a satisfactory result.

The surface of Great Quittacas Pond has varied from elevation 50.95 on March 20th to elevation 48.75 upon this date.

The surface of Little Quittacas Pond has varied from elevation 50.07 on May 15th to elevation 45.60 on October 19th. At this date it is at elevation 48.33.

As some of the stone work in the retaining wall at Little Quittacas end of the embankment, which covers the conduit connection between Great and Little Quittacas Ponds, was displaced by reason of action of heavy ice during last winter, this pond was purposely drawn down to the level of October 19, to allow the necessary repairs to be made. This was thoroughly done in the space of a few days. At the same time advantage was taken of this low level of water to prosecute a thorough cleaning of the shore line around the entire pond.

The ground around the Little Quittacas Pumping Station has been maintained to the usual standard of previous years.

All woodwork connected with the Little Quittacas Pumping Station, the gate houses near at hand and the engineer's dwelling have received a coat of paint.

The Little Quittacas Pumping Station continues to operate in a highly satisfactory manner. Every detail will be found in prime order. The engines continue to maintain the high record established in previous years. I feel quite certain that this excellent result may be further raised by the addition of a flue economizer. The temperature of the feed water as it now enters the boiler averages 175 degrees. The temperature of the flue gases is about 425 degrees. It would seem as if there should be some way to utilize this escaping heat. Will the

interest and yearly depreciation upon the cost of installing and maintaining some form of economizer prove a good investment when compared with the amount of fuel saved due to said installation, is the question to consider. I would recommend that this matter receive your investigation.

The following statistics relate to the operations at this station during the year.

| Total quantity pumped (gallons) | 2,562,598,170 |
|---|---------------|
| Total coal used (pounds) | 3,082,575 |
| Gallons pumped per pound of coal | 831 |
| Daily average quantity pumped (gallous) | 8,135,232 |
| Average head pumped against (feet) | 185.02 |

The cost of pumping has been as follows:

| Figured on pumping expenses as stated in detail in | |
|--|-----------------------------|
| Water Registrar's Report | \$19,202.03 |
| Cost per million gallons pumped into reservoir | \$7.49 |
| Cost per million gallons raised one foot high | $4_{\overline{1000}}$ cents |
| Figured on total maintenance | \$121,501.16 |
| Cost per million gallons pumped into reservoir | \$47.42 |
| Cost per million gallons raised one foot high | $25_{-6 \over 1.0}$ cents |

Further progress has been made in the direction of regrading and reliuing the railroad track connecting Little Quittacas Pumping Station with Braley's Station. A number of new sleepers have replaced those found to be decayed.

No repairs have been required in connection with the forty-eight inch steel force main connecting Little Quittacas Pumping Station with Braley's Station. The right of way through which this pipe passes has received considerable attention in the matter of clearing of underbrush and repairing embankments. The High Hill Reservoir has not required any attention in the matter of repairs. No labor other than that due to a proper maintenance has been given this location. The dwelling house, which stands near the southwest corner of this reservoir, has been repaired externally. The chimney, which was damaged by lightning some months since, has been rebuilt; the roof has been re-shingled, and the exterior of the house has received two coats of paint.

All labor upon the thirty-six inch distributing main leading from High Hill Reservoir to the City has been that required to properly maintain the embankment in the right of way from Turner's Pond westerly toward High Hill Reservoir.

The storing reservoir at Long Plain is not in use for supply purposes at the present time. Advantage is being taken of this fact by the State Board of Health, which contemplates its use by them in conducting a series of experiments in determining the efficacy of the so-called "Sulphate of Copper" treatment, which is said to destroy the "Anabena" and other Algic growths to which disagreeable tastes and offensive odors are often attributed. The past season has been devoted to a study of the conditions of the water as it exists from week to week. The following letter received from the Chief Engineer of the State Board of Health further explains the proposed work.

STATE BOARD OF HEALTH—CHIEF ENGINEER'S OFFICE, Room 140, State House,

Boston, Mass., December 20, 1904.

Mr. R. C. P. Coggeshall, Supt. Water Works, New Bedford, Mass.

Dear Sir:—We wish to thank you and your Board for the collection of samples of water from the Storage Reservoir at Long Plain during the past year, which has enabled us to get a very thorough history of its condition. We shall probably next year, in co-operation with the United States Dept. of Agriculture, investigate the effect upon the quality of this water of treating it with copper sulphate, the method suggested by the Department of Agriculture for the prevention or removal of growths of Algae, which imparts to waters the tastes and odors often so disagreeable to water takers. We shall probably wish to obtain some additional samples beginning next April, and shall probably treat the reservoir in the early summer.

Yours truly,
(Signed) X. H. GOODNOUGH,
Chief Engineer.

Some needed repairs in the way of carpenter work and painting have been made to the house at the Ansel White Dam, occupied by the reservoir keeper.

No attention has been given the brick conduit connecting the storing reservoir with the receiving reservoir.

The receiving reservoir is in good condition. The fence surrounding same has been reset in several places and painted its entire length. The woodwork of the gate house has been painted.

A portion of the lot in which the Purchase Street Station is located was taken for the purpose of erecting thereon a new schoolhouse and for an adjoining playground, on September 19th. The west fence has been transferred from the east line of County street to a line near the west line of State street, extended. The entire fence surrounding this lot has been repainted, the roadway within the enclosure repayed, in part. A large crack developed in the chimney due to frost action last winter. This extended for a good portion of its height. This has been cut out and thoroughly repaired. All the exterior woodwork of the building has been painted. The slate roof has been repaired where found necessary. The pumping engines remain in fair condition. All the pumps have been recently turned over to ascertain their working condition in case they are hastily needed. Steam was kept up at this station from April 20th to May 20th, while the repairs at Mt. Pleasant were in progress. was done as an extra precaution, because of Mt. Pleasant Reservoir being entirely empty at that time. On April 21st, Engines No. 1 and No. 2 were operated for brief periods by steam.

Mt. Pleasant Reservoir was emptied in April last. The drain was opened April 21st and the basin was empty on April 23d. The bottom and sides were thoroughly cleaned. The rip rap wall on the south side from the top down about twelve feet was found

in a badly damaged condition caused by action of ice. This was thoroughly relaid and the joints filled with cement. Other parts of the reservoir received needed attention. The work of re-filling the reservoir was commenced May 20th. The gate house and weir chamber have been overhauled and placed in best of order. All woodwork, including the fences, were re-painted.

The distributing mains have been increased 13,758 feet, and 2,358 feet of pipe laid previous to the past year have been removed. The total mileage is now 102.2856.

The sixteen inch pipe in County street, which terminated near the north line of Cove street, has this year been extended through Cove street to East French avenue, where it now reinforces the supply to three twelve inch mains which radiate in different directions from that point.

The ten inch pipe in Water street has been further extended from Union street northerly to William street. The section of Water street between William and Middle yet contain the original six inch pipe. The replacing of this pipe with that of ten inch would complete the enlargement for the entire length of street. Especially on account of the need of a better supply for fire purposes near the corner of Elm and Water streets, I would recommend that this be done.

A new line of six inch flexible jointed pipe has been laid this year upon the river bottom, connecting Pope's Island with the Fish Island supply. The pipe is laid in a trench, dredged for the purpose, practically parallel with the bridge and about twenty feet south of that structure.

This pipe replaces a similar line laid in 1898, and which was irreparably damaged by the government operations of 1899 and which was finally removed from the river bottom last year. In placing the pipe now under description, connection was first made with the water

main upon the bridge structure at a point about eighty-three feet west of the abutment at the east side of Fish Island. Here the pipe makes a right angle turn and descends to the grade of the Island on the south side of the bridge upon laud under control of John Duff, Esq. A second right angle turn to the east is made, and with flexible jointed pipe the line continues across the river in the trench above described and connects to same pipe in Pope's Island abutment as did the former pipe.

The dredging was done under contract by the C. M. Cole, dredger. The pipe was laid under contract with George W. Townsend of Boston. The plans and contract specifications were prepared by City Engineer W. F. Williams, Esq., under whose direction the work was done. This pipe was laid subject to a license of the Harbor and Land Commissioners, and permit was given by the War Department upon condition that no part of the pipe in the navigable channel be placed at a greater elevation than twenty-five feet below mean low water. All these conditions were complied with.

In view of the fact that it is proposed to double track Union street from Seventh street west to Rockdale avenue, and to place asphalt pavement upon concrete base as far west as Park street, I would recommend that previous to the execution of this work that the present four inch pipe in Union street, from County street west, be removed and the same replaced with a large pipe, at least eight inch in diameter, and that this size be continued as far as the asphalt is placed.

Electrolytic action is still in evidence upon the steel force main at the Beaver Dam, where it is crossed by the tracks of the Old Colony Street Railroad Co.; also at the Whitestone Brook, at which point a section of service pipe has again been completely destroyed. This completes the destruction of the third pipe, due to the action of the stray current from the Old Colony Street Railroad Co.'s

power system. It was hoped that the action of that company last year in re-bonding its tracks would do much toward the elimination of this trouble, but such does not appear to be the fact. The potential at the Beaver Dam is fully as heavy as previously. I have called the attention of the Superintendent of the Old Colony Street Railroad Co. to the importance of giving this matter prompt attention. I fail to receive any satisfactory reply. Neither do I note any inclination to do that which will remedy the trouble.

We appear to be helpless at the present time in preventing the use of our large steel force main by the Old Colony Street Railroad Co. as a conductor, for its return electrical current. It makes a beautiful conductor for them, but it is bad for us. This ought not to be. You understand, of course, that this use is constantly deteriorating this pipe. It may be some time before the damage becomes actually serious, but it will surely come in due time. Under such an impairment our whole supply will be in jeopardy, for be it remembered that this force main is the main artery of our entire system. I think we ought to take every possible precaution in preventing the destruction of the City's property from this cause. The entire elimination of this trouble undoubtedly means a heavy expenditure on the part of the Railroad, which they undoubtedly will not consider unless forced to meet the situation. A crippled supply means a far heavier expense to the City than the cost of now eliminating the trouble would be to the Railroad.

There have been nine leaks upon the mains the past year, as herewith shown.

| DATE | SIZE | LOCATION | CAUSE | Cost |
|-----------------|--------|-----------------------------------|---------------|--------|
| 1903 | | | | |
| Dec. 19 | 4 in. | Center street, east of Front | Pipe broken | \$8.43 |
| Dec. 23 1904 | 4 in. | Campbell street, east of State | Pipe broken | 10.72 |

Forty-five new stop gates have been set and three of those previously set have been removed. The total number now in use is 1,214.

Two waste gates have been set. The total number now in use is 101.

Eight stop gates for private supplies have been set, and one of those previously set has been removed. The total number now in use is 227.

Thirty-three new hydrants have been set, and fifteen of those previously set have been removed. The total number now in use is 806.

One hundred eighty-four service taps have been cleaned, as follows: Rust, 152; sediment, 21; trouble inside, 11.

Two hundred sixty-two service pipes have been laid, and twenty-three of those previously laid have been removed. The total number now in use is 10,166.

The total number of motors is 135.

The total number of meters is 2,145. The list may be divided as follows:

| Manufacturing supplies | | | 93 |
|------------------------|--|--|-------|
| Domestic supplies | | | 2,048 |
| Public supplies | | | 4 |

The following is a list of the different patterns used:

| | Crown | | 245 |
|---|----------------|-----|-----|
| | Empire | | 127 |
| | Gem | . 0 | 10 |
| | Nash | | 385 |
| | Hersey Rotary | | 107 |

| | Thompson | | 3 |
| | Trident | | 161 |
| | Union Rotary | | 159 |
| | | | |

Three new drinking fountains of the Jenks type have been placed this year, and five worn out fountains have been removed. The following is a complete list of the drinking fountains now connected with our distributing system:

- 1 West French avenue, at Cove street, Jenks
- 2 Bolton road, at junction of Rivet street, Jenks
- 3 Sixth street, at junction of County street, Jenks
- 4 Allen st, at junction of Dartmouth street, Jenks
- 5 Front street, at corner of School street, Jenks
- 6 Union street, at corner of Bethel street, Nash
- 7 Market st., bet'n Pleasant and Sixth sts., Jenks
- 8 Court street, west of Jenney street, Horse bowl
- 9 Elm street, west of Purchase street, Nash
- 10 · Kempton st., at junction of Mill street, Jenks
- 11 Hillman street, at corner of County street, Nash (drinking only)
- 12 County street, at corner of Smith street, Nash
- 13 Purchase street, at corner of Pearl street, Nash
- 14 Shawmut ave., at corner of Durfee street, Jenks
- 15 Acushnet ave., at junction of Weld street, Jenks

Nos. 6, 8, 9, 11, 12 and 13 are of an antiquated pattern and are badly worn. I would recommend that Nos. 6, 11 and 13 be replaced with a modern pattern of fountain during the coming year.

| 2001 | .0,000 | 00,000 | 2,010,000,014 | ,,001,020 | | | 111 | |

The maximum daily consumption was, on May 21, 13,603,000 gallons. The minimum was, on May 30, 4,417,000 gallons. The average daily consumption has been 7,001,520 gallons.

These figures indicate that the rate of consumption remains substantially the same as heretofore, and it is safe to add that at least one-third of our daily supply is allowed to run to waste and does no one any good. This reduction of waste to its lowest terms will follow as a matter of course in inverse ratio to the placing of additional meters upon wasteful supplies. Reduction of waste means the maintenance of the daily supply within a reasonable limit. The latter means postponement of the day when heavy expenditures will be required to secure an additional supply. We do not possess an unlimited supply. Our daily average consumption is gradually increasing. When it reaches an average of ten million gallons per day, we must formulate a plan for an enlarged capacity.

I closed my report two years ago with these words:

"The lavish use of water for all needed purposes is always to be encouraged. It is far better to allow an amount to waste than that any one should be deprived of an amount necessary for any proper use. With this proposition in view, let me present two demonstrated facts.

1st—The application of a meter to a dwelling in which unstinted use is made for every conceivable purpose, but where due care is exercised regarding the condition of fixtures, that no waste may exist, rarely returns a record that will call for the payment of an amount equal to that which the same taker has hitherto paid by schedule rates. In most of cases it is substantially less.

2nd — The application of a meter to the supply of a careless taker, who gives little or no concern regarding the condition of the plumbing, generally results in the

record of an amount many times that called for by schedule rates. This will continue as long as this taker is allowed his supply by schedule rates. But the minute he commences to pay by the meter record, he suddenly becomes interested as to the care of his fixtures. It rarely takes him more than one month to stop all waste to a point where the meter registers less than the equivalent by schedule rates. I say stop all waste; because it is wasted. A lavish use for all needed purposes being made in both cases.

There have been nearly two hundred meters installed this year. By whom were these purchased? In every instance it has been by a representative of the care-taking class. Not one has been purchased by a representative of the second class instanced; and they are the ones who really are responsible for the waste. In justice to the care taker, who is in the majority, it seems like discrimination to allow one careless taker to waste more water each day than is needed for the supply of perhaps a hundred families."

The above sentences are as appropriate today as when written. Every meter placed upon a supply of the second class above instanced, will show an improved result. The city has a right to install and maintain such a meter at its own expense. It seems to me to be in the interest of economical results to exercise this right in the future more than has hitherto been done. I recommend these suggestions to you for serious consideration.

Respectfully submitted,

R. C. P. Coggeshall,

Superintendent.

TABLE F.

LOCATION OF HYDRANTS SET IN 1904.

Acushnet ave., northeast corner of Elm.

Ashley st., west side, 247 feet south of Cove.

Belleville ave., west side, 320 feet south of Tarkiln Hill road.

Bridge, south side, 88 feet west from west line of iron plate over east abutment Fish Island.

Chancery st., northwest corner of Willis.
County st., northwest corner of Scott.
David st., southeast corner of West French ave.
Fairmount st., south side, 182 feet west from Rockdale ave.
George st., southeast corner of West French ave.
Grit st., southwest corner of West French ave.
Hathaway st., south side, 497 feet east of Church.
Hazard st., southwest corner of County.
Jenney Lind st., west side, 377 feet south of Kempton.

Jouvette st., south side, 534 feet west of County.

Jouvette st., southeast corner of Crapo.

Manomet st., south side, 246 feet east of Riverside ave.

McGurk st., southwest corner of Social.

Mill st., southwest corner of Ash.

Mott st., south side, 339 feet east of Brock ave.

Orchard st., southwest corner of Fair.

Phillips ave., south side, 368 feet west of Belleville ave.

Riverside ave., west side, 134 feet north of Manomet.

Riverside ave., west side, 336 feet north of Manomet.

Riverside ave., west side, 532 feet north of Manomet.

Rockdale ave., southwest corner of Fairmount.

Rodney st., south side, 1,427 feet east of Brock ave.

Seneca st., south side, 270 feet east of Acushnet ave.

Spring st., southeast corner of Fifth.

Stapleton st., southwest corner of Cove.

Tarkilu Hill road, southwest corner of Belleville ave.

Tarkiln Hill road, south side, 449 feet west of Acushnet ave.

Warren st., southeast corner of West French ave.

Water st., west side, 48 feet north of Center.

HYDRANTS REMOVED IN 1904.

Acushnet ave., northeast corner of Elm. Flush.

Ashley st., west side, 222 feet south of Cove. Post.

Chancery st., west side, 176 feet south of Parker. Post.

Cove st., southeast corner of County. Post.

Cove st., southeast corner of Stapleton. Post.

David st., south side, 289 feet west of Brock ave. Post.

Hathaway st, south side, 331 feet east of Church. Post.

Jouvette st., south side, 372 feet west of County. Post.

Manomet st., south side, 208 feet east of Riverside ave. Post.

Mill st., south side, 45 feet west of Ash. Flush.

McGurk st., west side, 548 feet north of Brock ave. Post.

Orchard st., west side, 98 feet north of Rockland. Post.

Rockdale ave., west side, 128 feet north of Lexington. Post.

Spring st., southeast corner of Fifth. Flush.

Water st., west side, 46 feet north of Center. Flush.

TABLE G.

STATEMENT OF WORK DONE BY THE SERVICE DEPARTMENT FOR THE YEAR ENDING DEC. 1, 1904.

| KIND AND SIZE. | Number of Services | Length on Taker | Length on City |
|--|--|---|--|
| Lead pipe, 1 inch heavy. Lead pipe, 1 inch light. Lead pipe, 34 inch heavy. Lead pipe, 34 inch light. Lead pipe, 36 inch heavy. Lead pipe, 56 inch light. Lead pipe, 56 inch light. Lead pipe, 56 inch light. Lead pipe, 10 inch. Cast iron pipe, 10 inch. Cast iron pipe, 4 inch. Cast iron pipe, 3 inch. Cast iron pipe, 3 inch. Cast iron pipe, 2 inch. | 5 43 99 57 51 1 2 1 | 6.0 167.0 301.5 889.5 1702.0 894.0 646.5 834.0 168.5 68.0 719.0 | 126.5 814.0 2285.0 1336.0 1162.0 |
| Totals. | 262 | 6396.0 | 5723.5 |

One $\frac{3}{4}$ inch iron service has been removed and replaced by one 1 inch light lead.

One $\frac{3}{2}$ inch iron service has been removed and replaced by one $\frac{5}{6}$ inch heavy lead.

One $\frac{3}{4}$ inch iron service has been removed and replaced by one $\frac{3}{4}$ inch light lead.

Eleven % inch iron services have been removed and replaced by $\frac{1}{2}$ 8 inch heavy lead.

One % inch heavy lead service has been removed and replaced by one 3/4 inch heavy lead.

Two $\frac{5}{8}$ inch light lead services have been removed and replaced by $\frac{5}{8}$ inch light lead.

One 2 inch cast iron service has been removed and replaced by 3 inch cast iron.

One 5% inch heavy lead service has been removed and replaced by 5% inch heavy lead.

Fourteen connections to services previously laid have been made by the owners.

Three connections to services previously laid have been made by the city, using 9 feet of 2 inch cast iron and $125\frac{1}{2}$ feet of $\frac{5}{8}$ inch heavy lead pipe.

Three extensions of services previously laid have been made by the city, using 636 feet of 6 inch cast iron pipe, 102% feet of 4 inch cast iron pipe, 533 feet of 2 inch cast iron pipe, 137 feet of ¾ inch heavy lead, 178 feet of ¾ inch light lead and 51 feet of ¾ inch light lead.

Three $\frac{1}{2}$ inch iron, one 2 inch light lead, one 1 inch heavy lead, two $\frac{3}{4}$ inch light lead, six $\frac{5}{8}$ inch heavy lead, seven $\frac{5}{2}$ inch light lead and three $\frac{1}{2}$ inch heavy lead services have been removed.

Length of service pipe laid during the year, 12119.5 feet or 2.2953 miles.

Total number of services in use Dec. 1, 1904, 10,166.

SUMMARY OF STATISTICS.

Report of 1904.

IN ACCORDANCE WITH SUGGESTIONS ADOPTED BY THE NEW ENGLAND WATER WORKS ASSOCIATION.

NEW BEDFORD WATER WORKS.

NEW BEDFORD,

BRISTOL COUNTY, MASS.

Population by census of 1900,

62,442.

Date of construction,

1866 to 1869, inclusive. Further supply, 1895 to 1901, inclusive.

By whom owned, Source of supply,

The property of the City of New Bedford.

Water was first introduced on Nov. 26th, 1869. From that date until July 10th, 1899, the supply was taken from a storing reservoir artificially formed by constructing a dam across the valley of the Acushnet river, seven miles north of the center of the City. This supply was augmented by a connection made in 1886 with Little Quittacas Pond.

Since July 10th, 1899, the whole supply has been taken from Great and Little Quittacas Ponds, eleven miles north of the center of the City.

Mode of supply,

Previous to July 10th, 1899, the water flowed by gravity from the Acushnet Storing Reservoir (grade 40' + high water New Bedford Harbor) through a brick conduit 3 feet wide, 4 feet high, 5 from miles long to a receiving reservoir (capacity 3 million gallons; grade 30') located opposite the Purchase street pumping station. Thence it was pumped into the Mt. Pleasant distributing reservoir (capacity, 15 million gallons; grade 154') located 1879 feet distant, from whence it flowed by gravity into the city's distributing system.

Since July 10th, 1899, the entire supply has been pumped from Little Quittacas pond (grade 52' through a 48 inch steel force main 8¼ miles long to a distributing reservoir (capacity 67 million gallons; grade 216') located upon High Hill, in the town of Dartmouth. From this reservoir it flows into the City's distributing system by gravitation through a 36 inch cast iron pipe 32 miles long.

The first named system is not now in use; but is held in reserve to meet any emergency which might occur.

PUMPING.

1. Builders of pumping machinery,

Purchase street station,

- a. McAlpine engine, built by Quintard Iron Works.
- b. Worthington duplex engine, built by Henry R. Worthington.

Trustees' Report.

To the City Council of the City of New Bedford:

GENTLEMEN: — The Trustees of the Free Public Library present herewith their 53d annual report, including the report of the librarian. To that report the trustees refer the City Council for a detailed account of the activities of the library during the past year, commending also the suggestions made by him.

The trustees have every reason to feel great satisfaction with the manner in which the work of the library is directed and with the zeal and fidelity of the entire staff. The work continually grows more taxing, indicating a near approach of the time when additions to the force must be made if the public continues to be served in the manner which it has grown to expect. In nothing is the extension of the library's enterprise and activity so marked as in the department of furnishing information on a great variety of topics. The librarian has, by every means in his power, encouraged the public to ask for this information, and the task has grown to a degree which is realized only by those in close touch with the library work.

Many of the questions asked may appear to some to be trivial, but neither the trustees nor the librarian feel that any searcher for knowledge, however trifling its nature may be, should be ignored or repelled. It is a conspicuous part of the office of a modern library to serve as a gigantic cyclopedia for the community in which it is located, and it is no part of the duty of its officials to discriminate as to the importance of the varying applications for information. But to meet the demand and to make the resources of the library of the most value, it is necessary that trained and skillful service should be provided. The trustees respectfully call attention to the fact that the present service, efficient as it is, will undoubtedly become insufficient within a very few years. As undoubtedly a competent staff of attendants is as necessary to a library as books, the problem of providing for widening needs of administration will soon be strenuously pressing.

The trustees again call attention to the necessity of enlarged reading room accommodations, and particularly to the great need of a children's room, under intelligent and sympathetic direction.

Although the bequest of Mrs. Sarah E. Potter is not yet available for the uses of the library, and although the trustees have as yet no official knowledge of the gift, we desire to express our appreciation of the benefaction, which opens up possibilities of usefulness that can hardly yet be realized.

Respectfully,

CHARLES S. ASHLEY,
SAMUEL HIGHAM,
JOHN HANNIGAN,
WALTER S. ALLEN,
WILLIAM L. SAYER,
ISAAC B. TOMPKINS, JR.,
JIREH SWIFT, JR.,
FRANCIS M. KENNEDY,
OTIS SEABURY COOK,

Ex-officio

Librarian's Report.

To the Board of Trustees of the Free Public Library:

GENTLEMEN: — I respectfully submit the following report on the condition of the library, and the work of the year just past.

The accommodations of the building were improved during the spring by the addition of a new gallery and stacks, providing extra room for about fifteen thousand volumes. Such, however, was the crowded condition of the stacks, that the growth of the library for five years at the outside, will again severely tax the space devoted to books. Although the stacks are overflowing, yet the greatest inconvenience is felt in the quarters devoted to the cataloguing and accession departments of the library, while the reading and reference room is usually uncomfortably crowded. There can be no permanent improvement in these respects until the time shall come when a new library building can be provided. Meanwhile, the work of the library will be carried on as smoothly and profitably as the conditions will warrant.

The notable bequest by the will of Mrs. Sarah E. Potter of \$250,000.00 for the purchase of books and other supplies of the library, marks an epoch in the history of this institution, and will undoubtedly prove of the greatest influence on its future. It will give an opportunity to build up special collections in a way which will help to

put our library in an extremely satisfactory position among the larger libraries of the country.

The circulation of books during the year bas been larger than the year before, by something over five thousand books. The percentage of fiction, owing to the plan of allowing two or more books to be taken out on one card, shows a slight decrease as seen by the annexed tables. The purchase of books amounted in number to 3,966, costing \$4,292.00, or an average of \$1.08 per volume. During the summer, the vacation privilege was again extended to readers, and was very generally regarded as a great convenience.

Our relations with other libraries in the interchange of books, have continued to be mutually agreeable, and bid fair to be of still greater benefit in the future. By the process of inter-library loans, the resources of every library of the country are practically within the reach of the card-holders of every other library.

The branch reading rooms have continued to render good service, and the plan of establishing collections of books at these stations, which can be taken out directly from the rooms, has proved to be a success, notably at the North Branch. Delivery stations have been established at six of the engine houses, where monthly delivery of books is made; the plan has worked well and promises to be of increasing value. It is hoped that within a few weeks, delivery stations may be established in the north, west, and south-west sections of the city, where books may be delivered and collected three times a week. the establishment of these stations, the city will be pretty well provided with library facilities. By loans of collections of books to the teachers at the High school, a delivery station has practically been provided for in that building. When the Kempton Fund, the gift of Sarah E. Potter, becomes available, it would seem that similar privileges could well be extended to many of the elementary schools, in addition to the library service which is now available.

A class of twenty girls from the Harrington Training school was given a course of lessons in library work during the early summer, which it was hoped would be of great advantage to the young teachers about to graduate from that school. The class entered upon the work with enthusiasm, and the experiment was in all ways successful and should be continued with succeeding classes.

The pamphlet containing a list of our Textile books has been widely circulated and has been in demand by libraries in all parts of the country. A revised edition will soon be published.

The bulletins issued in connection with the monthly book lists have been continued, dealing with timely topics, such as the Russo-Japanese War, St. Louis Exposition, and summer excursions. Slips giving a suitable list of boys' books have been freely distributed among the younger patrons of the library. The weekly display of art photographs has been continued through the year, varied by special collections of Thanksgiving and Christmas posters.

A collection of local business trade lists and advertising pamphlets has been made during the year.

The Providence Journal published an illustrated account of the library in one of its Sunday issues in the autumn. In this connection I wish to notice the timely interest and helpful suggestions made by the local papers at various times through the year, which have tended to make the public better acquainted with the resources of the library and the help which can be obtained on application.

Besides the munificent gift of the Kempton Fund mentioned above, the gifts of books to the library will be noted in the accompanying appendix, by far the largest donor to the library being the United States Government. Our library has been represented at most of the meetings of the Massachusetts Library Club, which has held several interesting and valuable sessions through the year.

The work of the assistants merits commendation, and their labors, conducted as they have been in crowded and poorly ventilated rooms, have been all that could be expected.

I would renew the suggestion which I made in my last report, that when it is possible to do so, the branch reading rooms should be open on Sundays.

I wish to call special attention to the very large collection of periodicals to which the library is a subscriber. In a folder, which will soon be published, a classified list of such periodicals will be printed. These folders will be distributed from the delivery desk in the library.

The information work is constantly growing, and should be emphasized so that all may know that information on nearly every subject may be obtained freely at the library, so whether the request comes by telephone, by letter, or by personal application, the entire resources of the library are within the reach of all interested questioners. The public library, by location and by use, should be the center of the intellectual activity of any community, and the library best proves its right to existence when it best serves such a purpose.

Respectfully submitted,

GEORGE H. TRIPP,

Jan. 2, 1905.

Librarian.

Appointed Aug. 9, 1904. Residence, 34 Durfee Street.

DEPARTMENT LINEMAN,

WILLIAM CURTIS,

Appointed Oct. 28, 1893. Residence, 43 Wing Street.

REPORT.

HEADQUARTERS FIRE DEPARTMENT,
OFFICE OF CHIEF ENGINEER,
CITY HALL,

December 31, 1904.

To the Honorable the City Council:

Gentlemen: — In compliance with the provisions of Section 7, Chapter 11, of the Ordinances of the City, I have the honor of herewith submitting for your consideration the annual report of the organization, condition and operations of the Fire Department during the year 1904, together with such recommendations as I at this time deem necessary.

ORGANIZATION.

The department consists of

- 8 Engine Companies,
- 1 Combination Chemical and Hose Company,
- 1 Hose Company,
- 3 Hook and Ladder Companies,
- 1 Protecting Society.

MANUAL FORCE.

Two hundred and twenty-six men, forty-four permanent and one hundred and eighty-two call men, comprise the manual force of this department, no increase having been made during the year.

FIRE STATIONS.

There are eight brick and one frame fire stations in good repair, necessitating no immediate large outlay. The Number Three Station, corner Kempton and Reed streets, is nearly completed, and will soon be ready for its equipment. I would recommend that this new station be equipped with the following apparatus: A steam fire engine and hose wagon and a hook and ladder truck; that Number Two engine and wagon be transferred from its present quarters to the new station, and that an up-to-date combination chemical and hose wagon be purchased to replace Number Two engine and wagon. Engines Four and Five can easily cover all the territory now covered by Engine Two, while the usefulness of a combination chemical and hose wagon in the business district and the necessities for an engine at the western part of the city, where the elevation is high and water pressure low, are obvious.

APPARATUS.

The apparatus consists of

- 5 Second Size Amoskeag Steam Fire Engines,
- 3 Second Size La France Steam Fire Engines,
- 1 Hand Engine,
- 8 Hose Wagons,
- 3 Hose Reels,
- 1 Combination Chemical,

- 3 Hayes' Aerial Ladder Trucks,
- 1 Ryan Truck (in reserve),
- 9 Exercise and Coal Wagons,
- 2 Fire Alarm Wagons.

All apparatus in service is in good condition, except the combination chemical. This piece of apparatus has responded to nearly all alarms of fire since 1895, and should be rebuilt this year.

HORSES.

There are forty-five horses belonging to this department, the majority of them in good condition. It may be necessary to replace some during the coming year.

HARNESSES.

There are five sets of harnesses for three-horse hitches, thirteen for two-horse and eight single harnesses, in good condition.

HOSE.

There are 18,350 feet of two and one-half inch cotton rubber-lined hose, as follows:

New, 5,900 feet. Good, 9,900 " Poor, 2,550 "

WATER SUPPLY.

The number of hydrants January 1, 1904, was seven hundred and eighty-eight (788); added during the year, eighteen (18); making a total of eight hundred and six (806).

There are twenty-four rerervoirs in good condition.

FIRE ALARM.

The fire alarm system is in good condition at present. The underground cables connected with the system have given some trouble during the past year, causing stray blows occasionally. This trouble has been overcome. I have purchased three junction boxes for testing purposes, and will install the same as soon as the weather permits. I have also instituted a series of weekly tests of the system that will tend to indicate any defects that may exist. Two new fire alarm boxes have been added during the year — Box 49, corner Howland and South Second streets, and Box 132, corner Acushnet avenue and Belleville road.

There are 102 fire alarm boxes, thirty-three of which are private, twelve bells and strikers, ten fifteen-inch gongs, twelve six-inch gongs, operated by a storage battery of three hundred and ten cells.

The storage battery has rendered good service for the past five years, but will have to be replaced this year.

I wish to call attention to the desirability of having every large manufacturing establishment provided with a private fire alarm box. The cost of such a box to the owners is comparatively small, while the advantage of being able to summon the department directly to the premises in case of fire is invaluable. Special apparatus is, in each case, assigned to boxes of this character, and the protection thus assured is worth many times the cost of installing the box.

I trust the time is not far distant when the transmitters, switchboards and all instruments at headquarters connected with this system can be housed in a fire-proof central station.

UNDERGROUND FIRE AND POLICE CABLES.

LAID IN 1898 AND 1899.

CONCLUSION.

I return sincere thanks to His Honor the Mayor and members of the City Council for their interest in this department, to my associates in the Board of Engineers for their loyal co-operation, and to the members of the department for their prompt and efficient discharge of their duties.

EDWARD F. DAHILL, Chief Engineer.

In Memoriam

frederick Macy,

Born October, 1834.

Elected Chief Engineer January, 1877, which position be beld with credit to himself and satisfaction to the citizens until his death, June 22, 1904.

An exemplary citizen, a model public official, his many excellent traits of character won for him the highest respect and confidence of his fellow citizens and the most loyal affection of his subordinates and co-workers.

| Enrollment of pupils, | 13,506 | 13,034 | increase | 472 |
| Average number belonging, | 11,675 | 11,269 | increase | 406 |
| Average daily attendance, | 10,735 | 10,169 | increase | 566 |
| Per cent. daily attendance, | 91.9 | 90.2 | increase | 1.7 |

COST OF INSTRUCTION PER SCHOLAR BY SCHOOLS.

In Table I, the cost of instruction per scholar is based upon the average number belonging to each school during the year, and the amount expended for the hire of teachers, fuel, care of schoolhouses, books and supplies, (except those furnished from the income of the Sylvia Ann Howland Educational fund and Dog fund,) the term, "care of schoolhouses" including only the salaries of janitors.

In Table II is given the cost, by departments, of each pupil, based on the average number belonging and the total amount expended for the maintenance of each department, not including the expenditures from the Sylvia Ann Howland Educational fund or Dog fund, during the year. This last computation furnishes the basis upon which tuition of non-residents will be collected.

Table I. The average cost of a High school

| pupil, | \$64.21 |
|----------------------------------|---------|
| Grammar school pupil, | 28.41 |
| Training school pupil, | 35.17 |
| Primary school pupil, | 22.15 |
| Ungraded school pupil, | 32 90 |
| Elementary Evening school pupil, | 3.51 |
| Evening High school pupil, | 14.05 |
| Evening Drawing school pupil, | 9.41 |
| Day School pupil, | 27.29 |

TABLE II.

| High school, | \$76.08 |
|--|---------|
| Harrington Normal and Training school, | 37.81 |
| Grammar schools, | 30.78 |
| Primary schools, | 24.41 |
| Ungraded schools, | 43.59 |
| Evening Elementary schools, | 3.77 |
| Evening High school, | 17.27 |
| Evening Drawing school, | 10.51 |
| Cooking school, | 4.09 |
| Manual Training school, | 5.37 |
| Average cost of a day school pupil, | 29.86 |
| Average cost of an evening school pupil, including drawing | |
| school, | 4.49 |

\$5,854.20 \$6,719.37 \$12,573.57

The average cost per pupil in the different departments of the schools, for text-books and supplies, has been as follows:

| High school, | \$5.67 |
|--|--------|
| Harrington school, | .97 |
| Grammar schools, | 2.29 |
| Primary schools, | .68 |
| Ungraded schools, | 1.05 |
| Average for day schools, | 1.44 |
| Average for Evening High school, | .57 |
| Average for Evening Drawing school, | .61 |
| Average for Evening Elementary school, | .15 |

THE SCHOOL CENSUS.

This census is required by statute to be taken each year in the month of September. It is an enumeration of children in the city between the ages of five and fifteen. The compulsory school age is from seven to fourteen, inclusive. Pupils are admitted, however, to our school at five years of age at two different times, at the beginning of the fall term and at the beginning of the winter term.

While the primary purpose of the census is to ascertain the number of children residing in the city between the ages of five and fifteen, the enumerators are required to return the number between seven and fourteen. They are also required to return the number of pupils attending the public schools, the number attending private or parochial schools, and the number who do not attend any school. These returns are used partly for local purposes and partly for those of the State.

The enumerators employed this year, six in number, were the same as last year with one exception, and most of them had had several years' experience. It is fair to presume that the same care and diligence were used as in the year before, and I do not question it. But where the census of 1903 showed a gain of children in the city over 1902 of 726, the census of 1904 showed a gain over 1903 of only 70. In two wards, Three and Five, a net loss of 40 each was reported by the enumerators.

The fluctuations of the census returns have always been a puzzle to me. I do not think that it is possible to get even approximate accuracy in a city like ours, where the enumeration extends over a period of a month. I am satisfied also that the month of September is a very bad month in which to take the census in our city, at least. Although the schools did not begin until September 12th this year, there were several hundred more children enrolled at the close of the first month than at the close of the first week. I believe that much of this was due to the fact that many families were still out of the city when the schools were opened. If so many were absent from the city at the middle of the month, surely more were absent from the city at the first of September, when the census enumeration began. I think it was a most unwise change which caused the State school census to be taken in September rather than May, when it was formerly taken. Had the change been made to October, it would have been much better.

EXPENDITURES FOR 1904.

The cost of the schools to the city for the year was \$272,009.73. This was an increase of \$7,441.59, chiefly on account of teachers' salaries. There was a slight increase in the salaries' account of officers and janitors, and in the account for text books and supplies. But the cost for fuel was several thousand dollars less and the printing account several hundred dollars less. The amount expended for repairs of buildings was somewhat larger in 1904 than in 1903.

In addition to amount raised by direct taxation and expended for the support of the schools, there were expended from the Sylvia Ann Howland Educational Fund \$3,423.12, and from the Dog Fund \$1,503.05, making the total amount expended \$276,935.90.

The cost per pupil, based on the amount raised by direct taxation and the whole enrollment, was \$25.81; based on the average membership it was \$29.86. This

was \$1.08 a pupil less on the average membership than in 1903.

This decrease in the cost for 1904 was caused by the larger average attendance per teacher than for the previous years. This was true of the primary and lower grammar grades only. The high school and the upper grammar grades had as a rule small classes, and the cost for those classes was more, not less. With the completion of the new buildings under construction a readjustment of districts will be possible, which will equalize conditions somewhat.

Respectfully submitted,

WM. E. HATCH,

Secretary.

Second Prize Essay—"The Best Use of Leisure."

Natalie Thornton

Third Prize Essay—"Inspiration Comes to the Disciplined." Clement Carrington Read.

^{*} Excused to take college examination.

13. Class Ode,

Words by Vesta W. King Music, Bower's Recessional

I.

On life's broad river, wide and deep,
Our boats we launch with hope today.
The course each one with skill must keep,
As towards life's goal we bear away,
Straight onward till our star is set;
But schoolmates dear we'll ne'er forget.

II.

Upon us now, sweet mem'ries throng
Of friendships dear and bright days past,
Which bind our hearts with ties so strong
That through the coming year they'll last.
Though 'round our path thorns may be set,
These school-days dear we'll ne'er forget.

III.

The Time for parting, now draws nigh, When as a class no more we'll stand; Let each one greet it with a sigh. As forth we go, a Pilgrim band, We say "Good-bye" with deep regret; But classmates dear we'll ne'er forget.

CLASS OF 1904.

"Onward."

College and General Courses.

(Four Years.)

Edward Taber Almy, Jr., Harold Linwood Bowen, Walter Stanley Briggs, Harry Duffield Clough, Clinton Maxfield Davis, John Joseph Gibbons, George Edgar Lilley, Walter Ricketson Mitchell, Frank Irving Neild, Patrick Henry O'Connor, Clement Carrington Read, Henry Bartol Rooth, Harry William Sheehan, Romeyn Andrew Spare, Robert Edson Townsend, Leon Ernest Varnum, Frederick Henry Winship, Jr. Helen Emily Baker, Rachel Marquand Barrows. ANNUAL REPORT

OF THE

SUPERINTENDENT OF SCHOOLS

FOR THE YEAR

1904.

Report of the Superintendent.

To the School Committee:

LADIES' AND GENTLEMEN:—I submit for your consideration my Seventeenth Annual Report. It is the forty-fourth in the series of annual reports of the Superintendent of Schools of this city.

By vote of your Board, this report, together with that of the Secretary, is to constitute the Annual Report of the School Committee.

In my report last year I gave a brief history of the schools since the year 1888, when I assumed charge of them. There is not much to chronicle in addition for the vear just closed beyond the usual events. But there is something. One was the award by the Superior Jury · of the Louisiana Purchase Exposition of two gold medals and a diploma for the excellence of our exhibit shown at the Exposition. Others were the assignment of the instruction in French in the eighth grades to the special teacher in that subject, and giving the regular ninth grade teachers the French as an additional study; the adoption of the new series of Prang's Text Books of Art Education for use in the schools; the replacing of the series of arithmetics used in the schools for many years by two series more in accord with modern methods of teaching that subject; the supplying of a number of sets of histories for the High School and upper grammar grades, to be used in collaboration with the regular text books in use and the library books; the making of other minor adoptions with the object of improving the efficiency of the teaching; and last, the beginning of the erection of a twelve room building for a mixed school in the south part of the city, and a sixteen room grammar school in the north part — both for the purpose of relieving the congestion in the schools of those sections and abandoning the rented buildings where several hundred children are now housed.

The annual report of the Superintendent is an official document that necessarily deals each year in the main with the same general subjects. It is intended to give the School Committee and the citizens a statement of the conditions that prevail in the schools at the time it is written, noting the changes that have been made, if any, for the time which it covers, that in any way affect the policy and development of the schools; and offers a means also for the Superintendent to make such recommendations as he deems best for their future conduct. Besides, each one forms a part of a series which should be of worth in determining the educational value of the courses pursued in the schools for a series of years in regard to administration, government, and instruction.

In presenting this report the same general plan has been followed as in those preceding, and I ask for it careful consideration by the Committee and our citizens, with a view of giving suggestion by which the efficacy of the schools may be constantly increased.

ATTENDANCE.

Constant and prompt attendance of pupils are both necessary to the securing of the best results. Frequent cases of absence, tardiness, and dismissal are harmful in many ways. All these affect not only the pupils who

cause them, but the whole school which they attend. Pupils who are frequently absent or tardy are acquiring habits by this neglect of duty which are likely to operate against them injuriously when they leave school. Employers of labor do not excuse laxity of habits in these matters; professional and business men are apt to lose their clients and customers if they indulge in them. All those who have relations with persons who are not prompt in their engagements are losers in time, if in nothing more. I do not claim that regular attendance should be insisted upon in the schools to the detriment of the pupil's health; but I do believe that very many parents give too little consideration to those matters which tend to create and conserve healthful bodies in their children, and the schools are one only of the sufferers. The school authorities are constantly striving to make the environment of the pupils in the schools hygienic and attractive in every way. They are also striving to inculcate habits that are not only necessary for the school, but for life. Not only is co-operation of parents often wanting, but active opposition is not infrequent. The home has its great responsibility in all matters pertaining to the child. The school should not attempt to assume it, nor can it. Both should work together, and when it is done there is seldom a complaint of results.

The record of attendance for the past year shows a marked improvement over that of 1903. But the year 1903 was exceptionally bad. The average normal absence is about eight per cent. of the membership. In 1903 it was 10 per cent. The past year it was normal again. There was an improvement also in other matters, namely, in tardiness, dismissals and truancy. Why this gain in these matters it is difficult to say. They both covered a period in which there was medical inspection for most of the time, as the statistical year ends in June

of each year. The teachers, I am sure, exercised the same amount of effort each year, and the truant officers the same amount of vigilance. The ratio of attendance to membership is about 92 per cent. year after year in most cities of Massachusetts. In small communities better attendance prevails for reasons that are obvious. The full details of attendance for the past year are to be found in the statistical tables following the Secretary's report.

TRUANTS AND REPORTS OF TRUANT OFFICERS.

The reports of both teachers and truant officers show a less number of absences of pupils without permission of parents and less truants. These items may appear to the casual observer to mean the same thing and, therefore, should agree in number. But this is not the case. To one pupil may be charged several cases of truancy. The officers report as one case the absence from the time the pupil is reported until he returns to school. The teacher records each half day of absence without permission as a case of truancy.

On examination, the reports of the officers will show that dealing with truants is a small part of their work. In fact they are attendance officers, and it is their duty to investigate all cases of unexplained absence for both day and evening schools when called upon to do so by the principals, and to assist in securing good attendance in every way possible. They also take charge of transfer cards of pupils who move from one district in the city to another, or who have recently become residents of the city, and see to it that they are promptly entered in the proper school. They visit mills and mercantile

establishments to ascertain whether the laws relating to the employment of children are observed. They, of course, arrest and prosecute truants and convey them to the County Truant School at Walpole, when convicted.

It is evident that the position of truant officer is no sinecure when he performs the duties of his position in an efficient manner, though many are apt to so regard it. The truant officer ought to be a man of tact and judgment as well as a man of decision and action. He should be familiar with the school laws of the State and the rules of the School Committee, and appreciative of their significance. He should maintain a courteous bearing toward teachers and parents and a kind manner with children, performing the duties of his office with full recognition of the rights of all concerned, giving as little offence as possible when he is compelled to enforce the law or the school regulations.

Truant officers who possess these qualities and are faithful in their service are of great assistance to the teachers and of general benefit to the schools. The principals and teachers should co-operate with them in a helpful way.

The officers, on their side, should strive always to come to a pleasant understanding with teachers when they feel that the latter have asked of them unwarranted duties or made them much useless labor by thoughtless reports on cards. There has been some friction by lack of forbearance on both sides. Though not serious, it has seemed to me unnecessary in nearly every case and should not have occurred.

The present officers have been in service for many years. They know well their duties, and, I believe, are performing them with faithfulness and with a fuller recognition of the requirements of their office as I have outlined them than ever before. Their annual reports are sub-joined.

To the Superintendent of Schools: —

DEAR SIR — I herewith submit my report for the year beginning September, 1903, and ending June, 1904:

| Schools visited, | 1,932 |
|---|-------|
| Absences of pupils reported by teachers, | 689 |
| Absences of pupils without permission of parents, | - 60 |
| Second offences, | 15 |
| Third offences, | 9 |
| Parents and guardians notified, | 705 |
| Pupils returned to schools from street, | 10 |
| Arrests, | 5 |
| Prosecutions, | 5 |
| Placed on probation, | 1 |
| Sentenced to Truant School, | 4 |
| Visits made to mills, | 55 |
| Violations of labor laws, | . 0 |
| Transfer cards received, | 514 |
| Absences of evening school pupils reported, | 140 |
| Absences of evening school pupils investigated, | 140 |

Respectfully submitted,

HENRY SMITH,

Truant Officer.

To the Superintendent of Schools: —

DEAR SIR — I herewith submit my report for the year beginning September, 1903, and ending June, 1904:

| Schools visited, | 1,994 |
|---|-------|
| Absences of pupils reported by teachers, | 869 |
| Absences of pupils without permission of parents, | 76 |
| Second offences, | 9 |
| Third offences, | . 8 |
| Parents and guardians notified, | 899 |
| Pupils returned to school from street, | 43 |
| Arrests, | 7 |
| Prosecutions, | 7 |
| Placed on probation, | 1 |
| Sentenced to Truant School, | 6 |
| Visits made to mills, | 38 |
| Violations of labor laws, | 2 |
| Transfer cards received, | 473 |
| Absences of evening school pupils reported, | 209 |
| Absences of evening school pupils investigated, | 209 |
| | |

Respectfully submitted,

WILLIAM A. BAKER,

Truant Officer.

Since the publication of the Rules and Regulations of the School Committee in 1902, which contained as an appendix the school laws of the State, Sections 3, 4, 5, and 10 of Chapter 46 of the Revised Laws, have been amended so as to read as follows:

Section 3. A child between seven and fourteen years of age, who wilfully and habitually absents himself from school contrary to the provisions of section one of chapter forty-four, shall be deemed to be an habitual truant, and, unless placed on probation as provided in section seven of this chapter, may, upon complaint by a truant officer and conviction thereof, if a boy, be committed to a county truant school for not more than two years, and, if a girl, to the state industrial school for girls; but if the girl is under twelve years of age, she shall be committed to the custody of the state board of charity, if they so request, for not more than two years.

Section 4. A child between seven and sixteen years of age, who may be found wandering about in the streets or public places of any city or town, having no lawful occupation, habitually not attending school, and growing up in idleness and ignorance, shall be deemed to be an habitual absentee, and, unless placed on probation as provided in section 7, may, upon complaint by a truant officer or any other person and conviction thereof, if a boy, be committed to a county truant school for not more than two years, or to the Lyman school for boys, and, if a girl, to the state industrial schools for girls; but if the girl be under twelve years of age, she shall be committed to the custody of the state board of charity, if they so request, for not more than two years.

Section 5. A child under fourteen years of age, who persistently violates the reasonable regulations of the school which he attends, or otherwise persistently misbehaves therein, so as to render himself a fit subject for

exclusion therefrom, shall be deemed to be an habitual school offender, and, unless placed on probation as provided in section seven, may, upon complaint by a truant officer and conviction thereof, if a boy, be committed to a county truant school for not more than two years, or to the Lyman school for boys, and, if a girl, to the state industrial school for girls; but if the girl be under twelve years of age, she shall be committed to the custody of the state board of charity, if they so request, for not more than two years.

Section 10. An inmate of a county truant school or of the parental school of the city of Boston, who persistently violates the reasonable regulations thereof, or is guilty of indecent or immoral conduct, or otherwise grossly misbehaves, so as to render himself an unfit subject for retention therein, may, upon complaint by the officer in control of said school and conviction thereof, if under fifteen years of age, be committed to the Lyman school for boys; if over fifteen years of age, to the Massachusetts reformatory. If a girl who is committed to the custody of the state board of charity under section three, four or five of this chapter, proves unmanageable in a private family, she may be committed by the state board of charity to the state industrial school for girls.

AGE AND SCHOOLING CERTIFICATES.

The number of age and schooling certificates issued by the Superintendent's office for the year 1904 was 1,109, divided as follows:

| Illiterates, Non-illiterates, Minors between 16 and 21 years of age, Duplicates, | 398 523 144 44 |
|--|-------------------------|
| Total, | 1,109 |

The above seems a simple story. It does not take long to tell it. But those figures indicate very many hours spent in issuing the certificates, many more in proving the claims of parents and guardians that the applicants were entitled to them under the laws of the State, and the exercise of much patience in dealing with unreasonable persons and with those who understood little or no English.

Very many applicants were born in a foreign country—Russia, Germany, Scandinavian Peninsular, Bohemia, Italy, the Portuguese Colonies, Canada, and others supplying their quota. A proper certificate of baptism or a register of birth is hard to obtain in many cases and in some impossible. The evidence of the school census is of no value whatsoever, and the Superintendent is often called upon to satisfy his judgment by other evidence. The greatest pains are taken to prevent deception, and I do not believe that many, if any, persons now secure certificates from this office by practicing it.

It is true that many children who are small and weak are given certificates to work, and it is a shame that they are employed. The law does not permit the school authorities to withhold a certificate from any child who is fourteen years of age, it makes no difference how weak or how ignorant he may be. Many children, especially those who come here from foreign countries, that neither read nor write, who are puny and poorly nourished, have working certificates issued to them because they are over fourteen years old, and then they must attend night school in addition to their day's work, while other children who are strong and may be graduates of a grammar school cannot work because they are not fourteen. I am not pleading that children shall be permitted to work earlier, but feel that the present law does not seem to be the best that can be devised.

There have been several attempts made to increase the school age, and at the last session of the General Court the following resolve was passed:

"Resolved, That the State Board of Education be authorized to investigate and report upon the feasibility of increasing the age of compulsory school attendance so as to include children of the age of fourteen years."

What the outcome of this resolve will be remains to be seen. I think it is a very serious question whether the age limit should be raised to fifteen years. As I have intimated, this making the number of years that has passed over a child's head the only test for fitness to go to work is wrong I believe.

The General Court acted also upon another matter last year which bears upon age and schooling certificates.

Section 31 of Chapter 106 of the Revised Laws was stricken out and the following section substituted: An age and schooling certificate shall not be approved unless satisfactory evidence is furnished by the last school census, the certificate of birth or baptism of such minor, or the register of birth of such minor with a city or town clerk, that such minor is of the age stated in the certificate, except that other evidence may be accepted in case the Superintendent or person authorized by the School Committee, as provided in the preceding section, decides that neither the last school census, nor the certificate of birth or baptism, nor the register of birth is available for the purpose.

SCHOOLHOUSES.

Within the last ten years, schoolhouses have been erected in the city with 3,575 sittings, and three portable schoolhouses with 120 sittings. Two of these buildings have large assembly halls, and one contains besides five

primary rooms, a large and well equipped room for sloyd, and also as fine a kitchen for teaching cookery as any school in the state. In addition to these, the Parker Street grammar school has been practically rebuilt and contains 560 sittings and an assembly hall. Some of the other buildings were erected to replace old schoolhouses, but in each case the new schoolhouse was larger than the old. Deducting, however, the capacity of the old structures, at least 3,000 sittings have been added during the time mentioned. The estimated valuation of these buildings with land, as given by the assessors, not including the furnishings, is \$621,717. But this valuation is considerably lower than the cost to the city.

Notwithstanding this large expenditure during the decade and the great addition to the school accommodations, there has not been a period during that whole time when it has not been necessary to hire private buildings for school purposes. There are now eight classes housed in rented quarters with between 250 and 300 pupils in attendance. Besides these there are several other classes that are colonized and others that are overcrowded. accommodate these suitably and to unite the scattered groups under efficient organization two buildings are in process of erection, and both will probably be completed the coming summer. One is to be a twelve-room building, located on a fine lot on South street, between Fourth street and Acushnet avenue. This will be a mixed school containing both primary and grammar grades. The other is to be a sixteen-room building with hall, and is located on the pumping station lot, corner of County and Coggeshall streets. This will be a grammar school and will be occupied by the pupils in the present John H. Clifford grammar school, and pupils who cannot be accommedated in the Parker Street grammar school, which already has two overflow rooms located in the Horatio A. Kempton schoolhouse on Shawmut avenue. With the completion

of these two schoolhouses, it will be possible to do away with all rented buildings in the two ends of the city, and so house the children that their hygienic environment will be what it should, and their educational opportunities greatly improved. These two buildings, when completed and equipped, will cost with land about \$200,000.

But this problem of school accommodation is no sooner temporarily settled in one section of the city than it confronts the school department in another. The schools in the center of the city are now congested with the exception of two, the Cedar Street school and the Sylvia Ann Howland school, and those are in the highest grades. I am anticipating serious difficulty in providing for the pupils the coming fall in the Middle Street school, the Harrington school, the Cannonville school, and in certain grades of other schools in the center. The school department had hoped that the new high school building would have been well under way by this time, that it might look forward to occupying the present high school building for a grammar school, and the present Middle Street school for a primary school. I do not believe that many are aware of the condition that now exists in the Middle Street grammar school. Part of the hall is used for a class, and has been for some time. The principal's office is used several times a week also for class recitations. It is too small and without means of adequate ventilation for a recitation room, not to mention other reasons why it should not be used for class purposes. The introduction of Latin and French into the grammar grades necessitates more recitation rooms as they are electives. In the other grammar schools some inconvenience is caused by these electives, but in none is the lack of room felt as in the Middle Street school.

Complaint has been made during the year by parents of children who attend the Cannonville school of the conditions that exist in that school, and their complaint is justified. This is a two storied, two room building, which has four grades of pupils in it. It has no cellar under it, is heated by stoves, and the sanitaries are small wooden buildings located some distance from the schoolhouse and much exposed to the sweep of the wind. Moreover, the school is crowded to its limit already and the district is growing. This schoolhouse should be enlarged at once or a new one erected in that neighborhood. The Harrington school, which is in the next district, can give no relief, as it is already crowded to the eaves. I hope this matter will receive the immediate attention of the Committee.

The Parker Street school lot was graded during the summer, the front of the yard turfed, and some shrubs set out on the bank sloping down to the rear fence. It is now an attractive yard. The grounds of the Clark Street and the William H. Taylor schools, of which so much has been said in former reports, remain as they have been for years, unfinished. In the case of the Clark Street school the grounds are an eyesore and useless for recreation purposes.

The City Council has failed to make any appropriation for the construction of the new high school building. The Committee and our citizens are too well acquainted with the facts in regard to this building to necessitate any explanation from me. I can only reiterate my earnest plea that something may be done this year by which a beginning shall be made upon a new building.

SCHOOL GOVERNMENT.

Methods of enforcing discipline in the school have been discussed wisely during the past year both in educational papers and the leading dailies. Whether corporal punishment shall or shall not be administered by the teacher as a means of control was the leading question. A livelier interest than usual was given to the subject by reason of a petition sent by a number of principals to the School Board of New York, a city that abolished corporal punishment many years ago, asking that it be restored.

I do not intend to discuss this particular phase of the main subject to any great extent. Corporal punishment is permitted in our schools by the Regulations of the School Committee. I believe the rule is a wise one and for the best interests of the schools. Yet I am free to say that its use should be rare, and the teacher who resorts to it should proceed with deliberation and care, and in no case should administer it with any exhibition of heat or anger.

I hold to the belief established in my mind years ago that rarely, if at all, should corporal punishment be administered to pupils in the higher grammar grades, but should be confined to the primary and lower grammar grades. For the same reasons that it is no longer permitted in the high school, it should not be exercised in the higher grammar grades. Corporal punishment to my mind is at best a temporary expedient and its use in the great majority of cases is not productive of a permanent moral reform. The restraint that is put upon would-be offenders by the fact known to them that the teachers can use it if necessary, is of more value than its frequent use.

While the number of cases has decreased year by year in our schools, there are still far too many. The teacher who is forced to resort to corporal punishment frequently, is either inexperienced, or has a weak personality, or has the disposition of a martinet. Mutual good will and helpful co-operation between teacher and pupils, and absence of show of outward authority, are some of the conditions that must prevail in a school room if good work is to be done, and I have never seen these exist in a room where there were many cases of corporal punishment.

It is no easy task to guide and instruct from forty to fifty children, and it is not strange that successful teachers even find it difficult to manage individual pupils without friction. The best teacher is liable to trouble of this kind. But general disorder, which is prohibitive of effectual work, is the fault of the teacher. Either she has made a mistake in her calling, or is misplaced. It is my experience that few teachers, though graduates of our and other normal schools, who have had no experience but that given in the professional school, can govern even the lower grades grammar children in our city schools. Their eyes are not sufficiently trained to compass a room of forty pupils, and a room full of children beyond the primary age, appears to give them a kind of stage fright which prevents their acting with the judgment that would otherwise be exercised. Children are quick to discern any trace of weakness in those in authority over them and are pitiless in their treatment of it. Disorder arises, and ere the teacher is aware of it she has lost control, which she is often unable to re-establish sufficiently to secure good results, even with all the assistance the principal and superintendent may render her.

Each year we have fifteen or more graduates of our city and normal school and other normal schools, residents of the city who are applicants for places. I have felt it incumbent upon me to try these in the first seven grades, and in the grammar grades the results have often been unsatisfactory, and mainly on account of discipline. Some have failed flatly, and others have had such ill success that they have been unhappy, the principal dissatisfied, and the influence bad.

THE ELEMENTARY SCHOOLS.

GRAMMAR SCHOOLS.—There are at present sixtyeight classes designated strictly as grammar grades, which under our organization include pupils in the last five classes of the elementary schools. Fifty-seven are housed in five buildings containing pupils of no other grades; seven are overflow rooms of two schools, five of which are from the Robert C. Ingraham school and two from the Parker Street school; two are connected with the Harrington Normal and Training school as practice schools, and two are located in the William H. Taylor school, which is chiefly primary. Of the overflow rooms, two are located in the Horatio A. Kempton school, two in the attic rooms of the Thompson Street school, one in a church, one in a store, and one in a portable schoolhouse. These overflow rooms come under the jurisdiction of the principals of the grammar schools in their respective districts. They are a bad feature for several reasons. With the completion of the two buildings now in process of construction, these annexes will be abolished much to the gratification of all concerned.

The work in the grammar schools was generally satisfactory during the year, and especially in those rooms where there were experienced teachers, though there were a few conspicuous failures even among them. Where inexperienced teachers were employed in these grades there was considerable loss, both on account of poor government as well as inefficient teaching. Only experienced teachers, and young teachers of exceptional ability

and aptitude for governing who are just beginning teaching, ought to be appointed to these schools. It is a great wrong to the pupils to employ any others.

The greatest weakness that exists in our grammar schools today is still the too close adherence to text-books. Good teaching in mathematics as well as in geography, in reading as well as in science takes the child out of the text-book and out of the school room, and makes him see and conceive life as it exists about him until it becomes a part of himself. I find children in our schools who talk glibly of the Atlantic ocean and its relation to their state as laid down in their books, who cannot point to it when they can see it from their very windows; children to whom history is a book and not the life of man; to whom literature is words that they must be able to pronounce and whose meaning they must explain, and not the expression of man's observation, conceptions, and emotions. Teaching can be made such interesting work that the time seems too short both to pupils and teachers; but it cannot be made so by simply following a skeleton course of study and getting into a perfunctory groove so that it would be hard to distinguish one day's work from another.

The introduction of French as as optional study in the eighth and ninth grades, and Latin as an optional study in the ninth, has, after several years' trial, met popular approval, French especially. The Latin is taught by the principals, the French in the eight grades by a special teacher, and in the ninth by the regular ninth grade assistants. Few now choose the study of geography in the ninth grades, and I would recommend that hereafter it be completed in the eighth. I would recommend also that a few of the subjects now required in arithmetic be eliminated and a half year be given to inventional geometry and algebra in its place.

PRIMARY SCHOOLS.—The primary grades, which include the first four years of school, are taught in one hundred and eighteen different classes. Four of these are housed in rented buildings, two in portable schoolhouses, and the remainder in regular schoolhouses. These schools contain more pupils than all the other schools taken together, many of whom, owing to constant foreign immigration, are beyond normal grade age and are unable to speak English when they enter, and in many cases have had no schooling or training. They make the task of the teachers in these grades much harder than it would otherwise be. Their work in some of the schools is made still more difficult by the shifting back and forth of children between the public and the parochial schools. These conditions are relieved somewhat by placing the oldest pupils who do not grade in ungraded rooms. But there has not been a time when it has been possible to organize efficiently enough of these schools to relieve the primary grades as they should be. Those that have been organized have always been placed in rented buildings, isolated, and not under sufficient skilled supervision. I trust that the completion of the new schoolhouses in the mill districts will permit the housing of these schools in them and the opening of others.

The spirit that pervades the primary schools, the methods employed in instruction, and the results obtained are deserving of little less than unqualified praise. The teachers are, with but few exceptions, professionally trained for their duties. Interest in the general welfare of their pupils, and zeal in the administration of their work, characterizes them as a body.

KINDERGARTENS.—There are three kindergartens taught by six trained kindergartners. One is located in the Thomas A. Greene school, near the center of the city, one in the Cedar Street school in the west central section,

and one in the Cedar Grove Street school in the north part of the city. One of the regular teachers has been absent for more than a year for study, and another for the fall term on account of illness, and is still absent. These schools have been somewhat better patronized during the past year than before, but there does not seem to be a strong popular demand for them. There exists quite a difference of opinion among educators still as to the true function of the kindergarten and the methods to be pursued in conducting them. I confess myself a good deal at sea regarding the educational value of the kindergarten as an institution. The spirit of the kindergarten is the right one to be exercised in training young children, and this spirit has pervaded the primary schools to their benefit. But whether the kindergartens shall become a fixed part of our public school system and children received into them at four years of age, given the occupations that are now in vogue is another question. There are many persons, and the number is ever increasing, who believe that it would be much better for the health of children if they did not begin their school life until they are six years old at least; who believe also that they will have made as much progress in their studies at the same age at which they leave school now as if they entered younger. I am inclined to this belief myself. Moreover, kindergartens are relatively much more expensive than the regular schools. When it is difficult to get money to build schoolhouses fast enough to house the older pupils and maintain the regular schools as they should be, it is questionable whether kindergartens ought to be ingrafted upon the school system though they do all the good that their most zealous advocates claim for them.

Ungraded Schools: — Two schools with three classes in the city proper and four suburban schools with eight rooms and nine teachers are now classified as ungraded.

The three classes in the city proper are composed of pupils who do not grade, and are housed in rented quarters. Two of them are in a hall at the south end and one in a room in one of the blocks at the north end. The pupils are all twelve years old and upward, and largely of foreign birth. Most of them leave school to work as soon as they are permitted to do so by law. A few who attend these schools for a time return to the graded schools, having been prepared by individual attention to do so. More of these schools are needed and no teacher should have more than twenty-five to thirty pupils. The school life of these pupils is short at best, and they ought to have teachers thoroughly trained for their work and willing to labor with such children for the great good they can do. It savors somewhat of missionary work, but there should be teachers who are willing to do it for that very reason.

The suburban schools vary in their organization. The Rockdale school has two rooms and teachers, and pupils of all grades. The Plainville school has one room and teacher, and pupils of all grades. The North school at Clifford has two rooms, but one only is used. It has one teacher, and pupils who are of the first six grades. the older pupils of this district being transported to the Acushnet school at the expense of the city. The Acushnet school, so called, situated at Lund's Corner, has four rooms and five teachers. This school has 132 pupils of all grades. These schools are all doing as well as the varying conditions permit. The Acushnet school, which is partially graded, not more than two grades being assigned to a teacher, compares most favorably with any graded school of the city, both in the spirit that pervades it and the results obtained. I hope the time may .come when this schoolhouse will be enlarged and all pupils of the North and Plainville districts transported there. Within a short time a new schoolhouse will be needed on Rockdale avenue in place of the present Cannonville school. When it is built the question of consolidating the present Rockdale and Cannonville schools should be considered and the building planned with that in view.

THE HIGH SCHOOL.

The high school in any community is probably the object of more criticism than all the rest of its schools taken together. Some of these criticisms are deserved without doubt, and are aimed at faults that ought to be remedied; but often they are without justification, the high school being charged with either doing many things which it does not do, or with not accomplishing results which cannot be hoped for until the home and the schools work in greater harmony.

The aim and inner workings of the high school are less understood by the public, I suspect, than those of the elementary schools, and that is one cause of criticism. For many in the community have either not attended it at all, or for only a short time. Unfortunately, circumstances prevent some from continuing their school course in it; others have not the ability to do the intellectual work required in such a school; and many others do not possess the ambition to secure a higher education, or the perseverance to attain it if they realize its value. So the graduates, or those who ought to know the high school, form a comparatively small contingent, especially in most large communities.

Again, pupils who attend a high school have reached the adolescent period when life begins to take on for them a new meaning; they are beginning to think and reason for themselves, and many possessing as yet little judgment and reflecting little, they are often not amenable to restraint; they stand forth more conspicuously as individuals than ever before and are objects of greater interest to the public and solicitude to their parents; they have entered upon a period of school life when a marked change comes in methods of study, and they are thrown more upon their own resources. These are some other causes that directly or indirectly produce criticisms.

Still again, the high school costs much more in proportion to maintain than the lower schools. Its organization is more complex, and the greater advantages it attempts to give individuals by electives the more complex and costly it becomes. It requires teachers of broad education, of culture, of tact and wisdom, who are trained in the arts of their profession, and such as these command good salaries. So the school attracts the attention of the taxpayers, some of whom, and often the largest, look at its cost without crediting it with the value that it is to the community and the State. For notwithstanding the cost of high schools they are worth all that is expended upon them, and the tremendous increase in their number in the last forty years, and the growing attendance upon them, even in the older communities where they have long existed, attest their value and their appreciation by those who realize the truth expressed by the Moselev Commission as the result of its observation of our educational system. It says: "To this date, belief in education and the results following from it, have been the effect rather than the cause of the prosperity of the United States. But ere long, education will take its place as a most potent cause, indeed, this trend has already begun." And this cause, must depend upon the development of our high schools, our technical schools, and our industrial schools, as well as our colleges and universities.

Our high school has been the source of criticism the past year. It has had criticism in other years, and

probably will have as long as it exists. That which attracted the most attention was publicly made and was the cause of several articles in the newspapers and an investigation and report to the Board by the High School Committee. It is not my purpose to take up the points of the controversy in this report, nor is it fitting that I should do so. But it does not seem to me that I should ignore it. I believe that those who brought up the matters upon which issue was taken did so with no unfriendly spirit, but with a desire for information and a wish to determine, if possible, whether the failure of the school to increase in numbers to any extent during a period of years and its actual decrease since two years ago when it reached its maximum were due to conditions within the school or to requirements for admission or to conditions entirely extraneous to the school. Legitimate questions which show interest in the welfare of the school should be welcomed.

But unfortunately the inquiry took a trend that gave the public, I fear, a feeling that there were radical and far-reaching deficiencies existing in the administration of the school which were impairing its usefulness and keeping many from it who would otherwise seek its benefits. This may be stating the case rather broadly; but that, as I have said, was the impression which got abroad, and more it was felt that those who were most closely connected with its supervision and administration were not willing to recognize and remedy the faults that were said to exist. Now the facts are that those who sought for information and incidentally named certain criticisms that had come to their notice are friends and patrons of the school and desire its welfare and growth as much as anyone; and those who seemed to resent the imputation against the school and appeared to resist investigation had no desire to conceal any defects that might exist in the school nor would fail to remedy them wherever reform seemed to be necessary.

As I stated at the beginning of this article, the high school is the object of much attention and much criticism in every community for the very prominence it holds in the school system. The high school is the crowning glory of the public schools, and its importance is bound to increase as the years go on. Its graduates are to be the future leaders in the professional, industrial, and commercial spheres of life, and this is not the opinion of a mere pedagogue alone, but of the great minds that dominate the world's activities today. For this reason our high school should be the very best that exists, that the youth of this community who have the intellectual capacity and the determination to attain high positions in life may have an opportunity to do so.

Our high school was never doing better work than it is to-day, and never before had so well equipped a corps of teachers. But it is working under disadvantages that make the work of the teachers more difficult to accomplish results than it should be, and some of the conditions are detrimental to the physical welfare of both teachers and pupils. Moreover, it cannot broaden its curriculum along the very lines of instruction which are considered today of most significance and of greatest educational importance to the progress of our country. I refer to those bearing on the scientific, the commercial, and the technical lines of education. The first two are inadequately provided for in our present school, and for the other there is no provision whatsoever, nor can there be in the present building. Is it possible that this thriving, growing city is to permit every other city in the Commonwealth to outstrip it in the advantages that it gives its youth in higher education for lack of a suitable building in which to do the work required? Is there no way by which an agreement can be reached that will

permit the erection of our contemplated high school building? Valuable years are slipping by, and the time will come, and it is not distant when the effect of the failure to provide a suitable high school building will be felt in every school in the city. Those who oppose the erection of a high school building in the city of such a character as the spirit of the age demands, while professing the strongest loyalty to the elementary schools, scarcely realize, I imagine, that by their opposition they are minimizing the usefulness of these schools in dwarfing the work of the high school.

THE HENRY F. HARRINGTON NORMAL AND TRAINING SCHOOL.

This school was organized in 1889, and the first class was graduated in January, 1890. The length of the course at first was one and a half years, and a class was graduated each six months. For a few years after the school was organized, all the teaching in the six grades connected with it for practice were taught exclusively by the normal students. There were then six classes which have since expanded to nine. In October, 1895, the normal course was lengthened to two years, the entering class limited in number to fifteen, and a class graduated each December. From time to time six regular teachers have been placed in the school, and now only three rooms are conducted exclusively by the normal students. Two of the regular teachers are graduates of the school, one of the Haverhill Training school, and three of the State Normal schools. These teachers were selected for their excellence in teaching, and are paid \$50.00 a year more than teachers in similar grades in the city, provided they have taught at least three years, have proven their

success in this school, and the principal recommends such increase to the Board. The normal students observe and assist in the rooms taught by the regular teachers as a part of their training.

This in brief is the history and present organization of the school. It was founded for the purpose of supplying the elementary schools with trained teachers, who should become acquainted with the organization and methods of governing demanded in our city system, and might also act as supply substitutes in cases of emergency.

The school has graduated 166 teachers. Of this number 115 are serving in the city, among whom are four principals of primary schools, and several have been called to lucrative positions elsewhere. The others have resigned for various reasons, but few because they did not succeed. Though at first their inexperience, as with the graduates fresh from other normal schools, has been the source of some friction and loss, the school has been on the whole of great assistance in supplying regular teachers and temporary substitutes who are better qualified than the average substitutes who are available for such work.

I am sure the history of the school has justified its maintenance so far. But the life and the educational demands of a city of this day are such that greater maturity and wisdom, broader knowledge and longer training are necessary for one who is to undertake teaching than ever before. This conviction has become so strong that the superintendents of the State have petitioned the State Board of Education to make the minimum course in the State Normal schools three years instead of two, six months of which shall be given to practice under close skilled supervision.

The course in this school should be three years long, and the students should be required to devote at least six months of this time in practice alone, in the grades which they are to be called upon to teach, and a year for practice would be none too long before they are placed upon the approved list of teachers. The present schoolbuilding is not large enough or well adapted to the purposes of a normal school with the length of the course as it is now, and it would be necessary if a year was added to designate some school for the present as a practice school until a proper normal school building is available. The twelveroom building which is now under construction on South street is to be opened as a mixed grammar and primary school, and could be utilized as a practice school with benefit to the city.

One thing which has operated against the efficiency of city normal and training schools has been the exertion of influence by friends of the normal students upon the school authorities to advance and graduate those who have failed to perform satisfactorily the work of the school and to give evidence of those qualifications that make a successful teacher. This pressure has been so great in a number of cities that their normal and training schools have been abolished. That kind of pressure has been felt here and seems to be growing. This school is a great benefit to the schools of the city and to those young ladies in it who desire to prepare for teaching just so long as merit and efficiency are to be the standards for admission and graduation, and no longer. When these cease to govern, the school will become a positive injury. The schools are maintained for the benefit of the children, and not to give employment to those who may desire to teach in them whether fitted to do so or not.

I desire in this connection to express my appreciation of the service Mr. George H. Tripp, the city librarian, has rendered the schools by the lessons he has given the normal students in the resources and use of the library. Mr. Tripp offered to give a series of such lessons each year to the normal students, and the offer was gladly accepted. He meets them the study period each

Friday afternoon from 2.45 to 4.00 o'clock for some weeks. The lessons of the first half of the course are devoted to an examination of the resources of the library and the method of cataloguing books. The remainder is given to instruction in the use of the library. At the close of the course tests are given the students on the results of the course. If such a course as this could be given the regular teachers it would be very valuable to them.

The graduating exercises of the school were held in the hall of the Robert C. Ingraham school on December 16th, 1904. The program is given in another part of this report. Fifteen young ladies were granted diplomas, all having won that distinction without question. Theses had been presented by all the class, but it would have made the exercises too long to have had them all delivered at the graduating exercises, and two only were delivered on this occasion, the others having been read previously before the School Committee and a few invited guests at the school. A scholarly and inspiring address was given the graduates and the large audience assembled by Mr. Frederick J. E. Woodbridge, professor of philosophy, Columbia University, whose subject was "Liberal Education."

The following statistics are furnished me by the Principal of the school:

| Pupil-teachers enrolled during the year, | 30 |
|--|-------|
| Pupil-teachers admitted to junior class January, 1904, | 15 |
| Pupil-teachers in junior class September, 1904, | 14 |
| Pupil-teachers admitted to senior class January, 1904, | 15 |
| Pupil-teachers graduated December, 1904, | 15 |
| Pupil-teachers admitted to junior class, 1905, | 13 |
| Pupil-teachers in senior class January, 1905, | 10 |
| Days substitution by pupil-teachers, | 181.5 |

THE EVENING SCHOOLS.

The results accomplished in the evening schools as they are organized at present are far from satisfactory. The registration is very large at the beginning of each year, taxing the resources of the school department to provide room and teachers sufficient to care for those who enter. Soon a large number drop out, the illiterates who are required by law to attend when the evening schools are in session, being the most regular, not, however, from a desire to learn, but from mere compulsion. Many of these are of a shifting class of whom it is difficult to keep track, coming from other places here and going from here to other places, moving from one part of the city to another, working in different mills and learning little or nothing. The majority of evening elementary school pupils come to school tired and sleepy when they do attend, are difficult to teach, and scarcely retain any of their knowledge from one year to another. The operation of the illiterate law, I think, is very unsatisfactory.

The schools are kept two nights only for twenty weeks. It may be asked why are they not kept open more nights a week. That plan has been tried and abandoned, chiefly because it was impossible to secure proper teachers for more nights a week without great injury to the day schools. As it is, the day schools suffer from the employment of their teachers for night school service. It is often said that the teachers of the day schools are overworked. I admit they have all they can do, if they do it well; yet, about forty per cent. of them teach in the night schools, and many of them are those, who, by reason of health or inexperience in their day work, are least fitted to do this double duty. A check is needed to be put by the Board upon this double service.

There is a bill pending before the legislature, which provides that illiterates shall not be permitted to work

until they are sixteen years of age. If this bill should become a law, it will relieve the evening schools very much. An illiterate will learn more in a day school properly organized for his class in one year than he would in a number of years in a night school.

The evening high and drawing schools have had about the same attendance as usual. The high school has been somewhat better attended this past fall than for the period covered by the statistical report given elsewhere, which covers the year ending last spring. There are not a large number, considering the size of the city, who seem to care sufficiently for self-improvement to make the effort to attend these schools. Quite a number of those who enter do not remain long enough or attend regularly enough to get much good from these schools. There is a contingent, however, who are regular in attendance, and are much benefitted.

I believe in maintaining evening schools for those who desire to improve their education. But such persons can only be benefitted to any degree by regular attendance through more than one season. I dislike to be pessimistic on any subject; but my experience with evening schools has made me very doubtful of the efficacy of many of those that are maintained at the present time. Of this I am absolutely sure that the results are small in proportion to the time, thought, labor and money expended upon these schools as generally conducted. I believe the same amount of these expended on the organization and maintenance of evening industrial schools would bring far greater return to the community.

MANUAL TRAINING.

With the number of pupils now attending the seventh, eighth and ninth grades it has been impossible for Mr. King to give instruction to them all during the past year. The time of the seventh grades has been cut down one half, and they have had but ten lessons instead of twenty, the usual number. This is a condition that should not be permitted to continue. The value of this instruction has proven itself beyond question, and it is a decided step backward not to continue it for all three grades for the full twenty lessons each year. Many boys leave school before they complete the grammar course, and are now being deprived of the means of acquiring the use of tools and the training that this department should give them, which was even less than is desirable under the original plan. The interest manifested in the work is general with the boys, and appeals to many who manifest little interest in their other studies. Another room ought to be provided and fitted up that next year the pupils of the seventh grades may have full time instruction in this branch. The services of another teacher will be necessary if this is done. I trust this matter will receive consideration by the School Committee and favorable action taken.

DRAWING.

A radical departure was made during the year in the method of teaching the subject of drawing and art study. The new "Text Books of Art Education" issued by The Prang Educational Company were adopted for use in the schools in place of their old series. The new books are texts placed in the hands of the pupils and drawings are made wholly on loose sheets of drawing paper and not in illustrated drawing books formerly used. While the

course as laid down in the new books varies little from that which was already in practice here, the new books will prove to be of greater value to the supervisor and the teachers in securing the best results than did the old series. This new plan of presenting the subject of art education to the pupils is meeting with strong endorsement among teachers far and wide. I feel that I cannot make clearer the purpose and plan of this new departure in teaching this subject than to give them as set forth in the prospectus of the publishers and in a brief report made me by our Supervisor, both of which I subjoin. The first cost of the new books will be larger than the first cost of books of the old series, but the average cost for several years will be smaller.

The publishers give as the purpose of the new course, the following statement: "The course has been laid down, after a conference with the best supervisors of the country, on the following lines, the three great divisions of the work being Observational Work, Technical Work, and Creative Work. These three lines of work are developed through the course as follows:

- "(A) The Observational Work is divided into General Aspects of Nature, Flowers, and Fruits, Birds, Animals and Insects, Figure and Still Life."
- "(B) The Technical Work is divided into four subjects: Atmospheric Perspective, Linear Perspective, Geometry and Pure Design."
- "(C) The Creative Work is divided into three subjects: Constructive Design, Decorative Design, and Pictorial Design."
- "(a) In the first three grades the Observational Work largely predominates, the Technical Work having practically no place, and the Creative Work being limited in quantity, and largely imaginative and illustrative in character."

- "(b) In the 4th, 5th, and 6th grades, the three lines of work, that is, the Observational, Technical, and Creative, are given nearly equal consideration, particular attention being paid to the steady growth and conscious effort on the part of the children. The work in each line is influenced by that of the other two, that is, the Observational Work is made definite by the influence of the Technical and the requirements of the Creative. The Technical Work grows up out of the Observational, and is limited by the demands of the Creative. The Creative Work is dependent upon the Observational for its materials, and by means of the Technical, sets these materials in order for its own use."
- "(c) In the 7th and 8th grades, the Technical and Creative Work predominate, the Observational Work serving more particularly to furnish additional materials and inspiration for the Creative Work, and at the same time, furnishing the ground for the development of the Technical."
- "In arranging the various exercises and lessons in the construction of this course, it has been the effort to keep in mind the interest of the child and his mental growth, and also the interrelation of the different subjects or divisions."
- "Briefly, the thought in these books is to make principle paramount to exercise; to give the child a chance to reason things out for himself, and to put before him the good expression of others, and to so direct his work that he will be led to appreciate the fundamental truths which underlie all expression in line and color."

MR. WILLIAM E. HATCH,

Superintendent of Schools.

DEAR SIR:—Since the publications of the Outlines in the Course of Study, a change has been made from the drawing books to the Text Books of Art Education, issued by the Prang Educational Company. These text books are in use at present through the sixth grade. This change gives us more freedom than before. Among the advantages gained is the excellent help in color.

In the primary grades the work is first free drawing, spontaneous expression of what the children see and think, followed by guided expression; story-telling with brush, pencil, and scissors; observation, comparison of size and proportion; form study and expression in clay modeling, particularly of life forms. Drawing is used to assist in the expression of nature study — the passing of the seasons, the departure and return of the birds, the formation of snow crystals, the habits of animals, life history of insects, growth of plant forms, fruits and vegetables. Children like to construct and take satisfaction in their own handiwork, however simple the thing made. The making of objects in paper requires accuracy in folding and in measuring and care in planning.

In the grammar grades the work is more analytical. It includes drawing from nature and life forms in pencil and color; observation of objects under different aspects, involving simple perspective problems, such as the foreshortening of circles and representation of cylindrical and hemispherical objects in different positions in the sixth grade, the appearance of rectangular objects in different positions and at varying levels in the seventh and eighth; making patterns and constructing articles in paper, the use of the working drawing; in the eighth and ninth grades, instrumental drawing to scale; designing shapes of objects which shall combine beauty of proportion with

serviceableness; the derivation of a unit from natural forms and the use of abstract shapes and measures in surface coverings and borders.

In both primary and grammar schools the work is correlated with other studies in the way of illustration in nature study, history and language, and design is applied to the decoration of book covers, themes and objects of school interest.

In the high school the work is continued along the same lines with more detailed work in perspective and in mechanical drawing; representation in light and shade in black and white and in color; applied design.

To some of us has been granted by nature and inheritance the gift of active aesthetic appreciation and expression, in more it lies dormant until awakened and given opportunities for activity. With many, after leaving school, life will be so filled with the struggle for material things that aesthetic feeling would have small chance for development unless called forth in earlier years. Not alone is it the question of forming taste and cultivating a love for beauty; the practice and judgment of relations, the training of the eye to see, and hand to do, have results reaching beyond the present schoolroom production.

Respectfully,

LUCY C. BEDLOW,

Supervisor of Drawing.

THE TEACHING FORCE OF THE DAY SCHOOLS.

There are employed in the day schools at the present time 253 regular teachers. Of this number, ten are supervising principals who teach only part of the time; fourteen are principals, having charge of primary or mixed schools, comprising from four to eight classes, each teaching a class; five rank as principals and have charge of city ungraded or rural ungraded schools; twelve are supervisors and teachers of special subjects; six are kindergartners; one is a permanent substitute; the remainder, 205 in number, are class teachers; Eighty-five per cent. of these are college or normal school graduates. The remainder are teachers of long experience, who, for the most part, have, by study, added to their general and professional knowledge, and number among them some of our most successful teachers.

The corps, as a whole, is one in which the city may well take pride. They vary, it is true, in teaching ability, in power to control and influence their pupils, in physical and mental equipment, in love for and devotion to their profession, and in their appreciation of the necessity for continuous special and general study, that they may grow and become stronger each year in their calling. Those who may not possess as much natural aptitude for teaching or governing, as is desirable, ought not to be criticised for lack of them, though they are failures if they fall below a certain standard, and have chosen the wrong calling if experience does not give them sufficient strength to make them at least fairly successful. But those who fail to recognize the dignity and importance of teaching, and, having chosen it as a profession, are unwilling to pursue it with zeal and devotion, and seek constantly to know better each year its demands and equip themselves to meet them, are blamable.

Many of the teachers are students of professional literature, read more or less for general knowledge, and seek other means to become broader and more proficient. The opportunities for intellectual growth and the acquirement of culture are many in the city at this day, and call for little or no outlay in acquiring them but time and effort. The city library, with its large and excellent collection of books, and a librarian who was a most successful teacher for years, and who is ever ready to assist those who are seeking knowledge; the pedagogical library at the school committee rooms; the reference and desk books supplied generously by the School Board to the teachers; educational journals and magazines to be had at a small outlay; lectures on a great variety of subjects and musical entertainments of a high order, - all these and many other means for self improvement are to be had here at home. And to these may be added the various summer schools, which are maintained by our normal schools and colleges, the educational organizations and institutes with their meetings, which give opportunity to those who wish to perfect themselves in their work and extend their professional horizon.

But there are too many who make little or no use of these means at hand for growth and self culture. Teaching with such as those becomes an occupation, not a profession, and unfortunately it is difficult to make the community realize the wide difference between the results of their narrow instruction and that of those who have broader conceptions and grasp. For this reason some teachers are retained in their positions who do not deserve to be. A writer in one of our leading magazines, who has given much time to the investigation of public schools, their condition, their methods and their teachers, has asserted that teachers, as a class, are not readers and students; that they consider their every day communion with text-books and a few reference books a sufficient

acquaintance with literature. If this is true, it is most unfortunate.

Examinations are required in some places at stated intervals to test the scholarship of the teachers. Whether this is wise is questionable, but surely one who aspires to a principalship or other positions of high responsibility should be able to give satisfactory evidence of scholarship, administrative ability, and enthusiastic devotion to his profession.

The elementary schools of this city are now being recruited chiefly by graduates of the city Normal and Training school. There are now 115 of the 253 teachers who have been professionally fitted in that school. There is a menace to the efficiency of the schools in this very fact, unless these graduates improve every opportunity after appointment to positions in the schools to improve themselves by study, not only of those branches which bear directly upon their grade work, but of those which will give their pupils a broad outlook and a knowledge of life outside.

The schools are called upon now to absorb each year fifteen young inexperienced teachers of our normal school, and several others who are graduates of the State Normal schools, and residents of the city. This is because the feeling is prevalent that teachers resident of the city shall be employed to the exclusion of others, whether they are as well qualified as others or not. While I am in favor of giving the preference to home talent to the exclusion of others, provided both are of equal worth, it is injurious to the interests of the children to employ so many inexperienced teachers as we are now doing. There has been some friction and loss in the schools during the last few years by reason of this policy, especially in the grammar grades. Many cities that pay less yearly salaries employ no teachers, even if residents, who have not had at least a year of successful experience. This is a matter of vital importance to the future welfare of the schools, and I ask for it the most careful consideration.

A city system of schools must necessarily be more complex in its organization than those of smaller places. Government is more difficult, competition is keener, and many other reasons make it more difficult for young teachers without experience to begin their work at once in a large school system. This is not my judgment alone, but that of many. I have said in my report on the Harrington Normal and Training school that a practice school where the graduates might work for a year before being placed on the regular list of teachers would help present conditions. They might be paid there less salary than regular teachers, their responsibilities being less. Some remedy ought to be applied, for a whole school system suffers appreciably from the results of inefficient teaching and weak control in even a few rooms.

I append the names of those teachers who have resigned during the year, and the names of those who have been appointed; also those who were absent on leave for whole or part of year, and temporary teachers. This list does not include the ordinary absences for various causes, which are many.

RESIGNATIONS.

Brown, Robert M. Barstow, Mary C. Eaton, Emma A. Gleason, Mary E. Hart, Annie C. Lamb, Mary O.

Maxfield, Annie C. Peckham, Mary E. Phillips, Harriet S. Pratt. Edith W. Potter, Grace H. Smith, Annie F. Macy, Mary A. Van Allen, Anna E.

TEMPORARY TEACHERS.

Bennett, Harriet P. Gammons, Helen A. Nudd, Alice T. Perley, M. Elizabeth Rollins, Albert M.

DEATHS.

Briggs, Elizabeth P.

Graham, Mary J.

It is my sad duty to report the death, during the year, of two teachers,

MISS ELIZABETH P. BRIGGS, MISS MARY J. GRAHAM.

Miss Briggs was an efficient teacher of modern languages for many years in the high school. She contended against failing health for some time before asking for leave of absence, and had not been out of the school very long before she passed away. Her death was deeply felt by all with whom she was associated in her work, and by the many graduates of the school for whom she had done so much. A teacher's life and influence, more than that of most persons, live in the lives of others, and the years of faithful service rendered by Miss Briggs in the quiet fulfillment of the duties of her chosen profession will continue to be felt long in the future by the many who sat under her teaching.

Miss Graham was for thirty-one years a teacher in the primary schools. She was a woman of warm heart and tender susceptibilities, who performed the duties of her position always with unfailing fidelity. Though she contended for many years against the weakness of a frail constitution, she labored uncomplainingly to the end in her profession, and passed on to a higher sphere, bearing the love and esteem of all who knew her.

MEDICAL INSPECTION.

Medical inspection in the schools was instituted in 1897 under the direction of the Board of Health with the consent of the School Committee. At first, two physicians only were employed. They were unable to visit the schools often enough to make the inspection effective, especially in cases of contagious diseases. The doctors seldom visited the class rooms, but dealt with the children sent to the principal's office by the teachers. To increase the efficiency of the inspection two more physicians were employed, and the Board of Health met the Superintendent of Schools, and together they formulated a plan by which the inspectors should visit every school as often as once a week, and oftener, if there was any special cause for doing so. In their visits, they were to go into every class room that all pupils might be brought under their direct inspection.

The last plan adopted worked very satisfactorily, most of the cases of contagious diseases being detected in their early stages and their spreading materially checked. How effective this last plan was, as compared with a period when there was no inspection, is shown by the following figures. During the year when there was medical inspection 1,093 cases of contagious diseases were reported to my office, for which 2,974 notices were forwarded to the principals of the schools who might have pupils in their schools directly affected. Last year when there was no medical inspection, 170 cases only were reported to my office, for which 570 notices were sent to principals. The number of cases reported during inspection, 923 being the difference of the cases reported to the Board of Health by family physicians, and inspection on one hand, and family physicians alone on the other. All of these cases reported when the inspectors were visiting the schools do not represent diphtheria, scarlet fever, small pox, and the like provided for in the statutes, but include others, which, if not so dangerous, are at least harmful. They no not include pediculosis and other offenses against cleanliness. Some persons are inclined to sneer at the work of the inspectors in trying to eradicate pediculosis and other uncleanly conditions; but they are not often parents of children possessing wholesome homes and caretaking mothers, whose children become infected by those pupils who do not have these desirable environments out of school. In fact, the teachers have more complaints from parents in regard to pediculosis and certain contagious diseases that the Board of Health never know of through the family physicians, than they do of those more dangerous, and which the family physicians are compelled by law to report. Again, in many cases of scarlet fever of a mild form, no physician is called to the house, and children return to school in the stage when they are in the condition to spread the disease more than at any other time. In such cases the services of the inspectors are invaluable, for the teacher can send for him, even if it is not his day to visit, and his decision often confirms her fears.

Besides the aid that the inspectors gave to the teachers in cases of contagious diseases of all kinds, they rendered valuable service in discovering functional diseases and other abnormal conditions of children. Simple tests were used to determine these, and when suspicion was confirmed, there was no attempt to treat them at school, but the parents were notified and asked to act. The only cases ever treated directly were those of uncleanliness, and those were dealt with under the direction of the teacher, acting under the advice of the physician and the authority of the School Committee.

I am a believer in the responsibilities of the home, nor would I abrogate to the schools any responsibility of the home which it will fulfill. But, unfortunately for the better portion of mankind, there is in every community

those who cannot be permitted to act their own pleasure, because if they are allowed to do so they become a menace to public safety and the moral welfare. If this were not true, there would be no necessity for compulsory school laws, for a Police Force, for a Board of Health, or many other institutions which the law abiding, tax-paying, considerate citizens feel the necessity of maintaining for the public good.

In a cosmopolitan city like ours, with many citizens whose poverty or moral condition makes them indifferent to those things which the better class cannot tolerate, the public must take upon itself certain authority that may not be necessary to a community which is small, more homogeneous, and living on an average higher plane. The man who attempts to prescribe in this day just where public intervention and control must stop has attempted to solve arbitrarily one of the greatest problems of the age. The will of the majority is the law to which we have committed ourselves; and when the will of this majority assumes certain public duties, which prove, on trial, to work for the common welfare, they are likely to continue. All these questions concerning public control are bound to be matters of contention for years to come, and medical inspection is but one of many that are to be settled.

I believe in medical inspection. It is a logical outcome of compulsory education. And so far as that goes, when the State institutes compulsory education, there is no logical limit to the functions that it may perform but that prescribed by the will of the people. It may go to the extreme of the Spartans of old, who assumed the charge of the child at birth and educated him for the service of the State.

But unfortunately for medical inspection with us, the question of continuing it, though generally admitted to be desirable, has been discontinued by reason of a disagreement between the City Council and the Board of Health about the appropriation for it. Undoubtedly, had the City Council made the full appropriation asked for last year by the Board of Health, medical inspection would be in operation in the schools today.

In the meantime, for a year there has been no medical inspection in the schools, and the contention has been renewed whether the Board of Health or the School Committee shall have direct charge of the work, and to which body shall the appropriation be granted by the City Council. In the discussion that has arisen, there has been interjected into the controversy, the question of the scope the inspection shall take. Some would institute an inspection that requires a diagnosis of every child and a tabulation of the functional and other diseases of every child in the schools. This seems to me to be most desirable, if the co-operation of parents can be secured and the expense attending it can be afforded. But surely we should have medical inspection under some plan even though it be no more comprehensive than the one formerly in practice. I would go even farther and say that the welfare of the schools demands it.

SCHOOL ORGANIZATION.

Various forms of organization are being tried by which the operation of the graded system, with its tendency to deadening uniformity and suppression of individual aptitude, may be made elastic. One hears of the Batavia plan, the Elizabeth plan, the Cambridge plan, and others. Superintendents and teachers make pilgrimages to these and other places, witness the plans in operation, and perhaps attempt something of the same in their own schools. Sometimes these imported schemes proves successful in the new fields, and often they fail.

An organization that may prove successful in one place under a leader who believes in it, who has the power and skill to create enthusiastic workers in it, fails in another by reason of conditions that do not prevail in the other. Local conditions must be carefully studied in making innovations. The size of the place, the character of the population, financial resources, the school plant, the preparation of the teachers, these and other matters all have their effect upon the success or failure of some much lauded plan for the regeneration of a school system.

All persons who have given the subject of modern school organization much thought, must be impressed with the great differences that prevail in it throughout this country, and recognize the merits and defects that exist in all. But it seems to me that a crude and unscientific way to solve this most important question, and one that is productive of disastrous results in many cases, is the way we are going at it at the present time.

Some forceful, scholarly superintendent, with marked executive ability, thinks out and puts into practice some plan that improves matters in the schools of the city or town which he directs. It attracts attention. His schools are visited by others who are pleased with its workings as observed. They go home, advocate it and it is tried. Often it means a complete revolution. At first it seems to succeed. Then for various reasons it fails and the last condition is worse than the first. The superintendent loses his place and the whole school system suffers for years.

This is no pen picture, but it is of not infrequent occurrence. Hasten slowly is an excellent motto in school affairs. One is dealing with human lives. I am no reactionary. I believe in and welcome all that indicates true progress. But I believe that it is possible to proceed in the matter of rectifying the faults that undoubtedly exist

in the general character of school organizations in a far better manner than prevails today.

I read that one city has changed its seven-year elementary course to an eight-year course; that another has changed its nine-year elementary course to an eight-year course; that another has changed its eight-year elementary course to a seven-year course; that some have four and others three years primary and four or five years grammar. These are but few of the schemes that are being tried in the attempt to adjust conditions that are unsatisfactory.

All claim that they are giving the children the best advantages, the shorter courses as good as the longer.

Now, school organization is a very practical question. It touches educational economy as well as educational efficiency. Is there no solution of it? Is it not possible to arrive at definite conclusions as to the general kind of organization that is best for large cities, for small cities, for towns and rural districts, modified as necessity requires to local conditions? We have a great National Educational Association with a National Council and various departments, among which is the Department of Superintendents. This Association has done invaluable benefit to the schools of this country by its committees of conference which it has appointed from time to time, and for which it has made liberal appropriations. These committees have investigated certain phases of educational work and reported the results of their investigations, for instance, The Report of the Committee of Ten. These reports have had great influence on crystalizing public sentiment on matters which came within the sphere of their investigation. Until this Association or some other of educational prominence, (and there is none other so far reaching in its influence on public schools as the National Association), investigates and puts the stamp of approval on forms of school organization, will we cease to go on in the hap-hazard course that we are now pursuing.

The organization of the schools of New Bedford differs in some respects from most of those even in Massachusetts. We have four years primary and five years grammar, while most systems have three years primary and five or six years grammar. We have some ungraded schools for pupils who do not grade. But we do not have enough of these schools, nor do we make adequate provision for those pupils who are intellectually the strongest or for those who are mentally deficient.

Some statistics that I have gathered from the primary schools of the city, which have an indirect bearing at least on this subject, show the necessity of some modification of the organization in these schools. There were reported, at the time the statistics were taken, a membership of 5,977 pupils. Of these there were 3,470 who had attended no other school than that in which they were enrolled at the time the statistics were taken; 1,486 had been members of some other school in the city; 553 had attended for a time the public schools of some other city or town; 468 had attended for a time some parochial school; and out of the whole number, 771 were foreign born. The majority of those who had not attended continually the public schools of the city did not grade well with our schools. A' census of children who were pronounced mentally deficient, taken a few years ago, showed that there were about forty of that class in the schools. We have no special school for these children. We have ungraded schools that will accommodate about a hundred pupils who do not grade, while the statistics given above lead me to the conclusion that ungraded schools which would accommodate six or seven times that number are desirable, and at least two special schools for the mentally deficient.

The length of the elementary course, of the high school courses, general, classical, and commercial, and the

number of pupils that should be assigned to a teacher in the various grades, are other questions of school organization upon which there should be a more settled policy than prevails. As I have said before, I believe there can be a rational solution school organization which shall commend itself to the country at large.

CONCLUSION.

In closing I wish to thank the Board for its support and co-operation. With these the Superintendent can maintain the efficiency of the schools and cause them to progress continually. Without them he cannot hope to accomplish much.

Respectfully submitted,

WM. E. HATCH,

Superintendent.

Twenty=Sixth Annual Report

OF THE

BOARD OF HEALTH

OF THE

CITY OF NEW BEDFORD

TO THE CITY COUNCIL

For the Year 1904.

NEW BEDFORD:
THE A.E.COFFIN PRESS, CITY PRINTERS,
1905.

REPORT.

Office of the Board of Health, New Bedford, January 1, 1905.

To His Honor, the Mayor, and Gentlemen of the City Council:—

Gentlemen — In presenting the 26th Annual Report of this department, we are pleased to say that the year which has drawn to a close has been an exceptional one as regards the health of the community. The death record (1347) as compared with the year previous, when there were 1590, is certainly a favorable showing, especially when it is considered that there has been a very material increase in the city's population. There were but few contagious diseases during the 12 months, the record showing the smallest number for 13 years. At no time during the year were there more than 17 dwelling bouses held in quarantine for contagion, while on several occasions the number was reduced to four, and early in June there were but two, a condition which we trust will be repeated the coming year.

GARBAGE AND ITS DISPOSAL.

During the year, by vote of your honorable body, we were authorized to annul the old contract with the New

Bedford Product Co., and to make a new one with the New Bedford Extractor Co., for the term of 10 years. This has been done and at the same figure for which the work has been carried on during the last three years. The new contract calls for collections from all parts of the city, and we feel that the city has been a gainer in thus insuring a sanitary collection and disposal of the city's garbage for such a term of years, at an expense which will not advance with the natural growth of the city's population.

The New Bedford Extractor Co. will have in operation by the middle of February, a plant, duplicated in parts, to meet any emergency that may arise in the process of destruction. We have no hesitancy in saying that no city in the United States will be better equipped to handle its refuse material than New Bedford, when the new plant is operated. It is no small undertaking to collect and destroy daily 30 tons of garbage, and as this amount has continuously increased during the last five years, it is a self-evident fact that your honorable body made no mistake in directing us to act in this matter.

The expense per capita is lower than in any other city in the United States where garbage is collected and destroyed. While many cities continue to feed their garbage to swine, thereby lessening greatly the expense, such procedure is not considered beneficial to the health and sanitary conditions of the cities themselves, and especially the surrounding neighborhoods from which the milk supply of the cities is almost wholly drawn. It is only a question of a short time when all cities will destroy their garbage.

MEDICAL SCHOOL INSPECTION.

Owing to the refusal of an appropriation which was asked for to continue the medical inspection of school

children, we were reluctantly obliged to give up said work. We trust that in the near future we shall be granted sufficient funds to carry on this important service.

BURIAL PERMITS.

It is gratifying to report that in the preparation of records necessary before issuing burial permits to undertakers, a better idea of what the National and State governments require has been acquired. A system, the plan of recording facts of this character, approved by National and State officials, has now been in vogue for over a year, and the undertakers have readily seen the wisdom of such a policy. With the same care in ascribing the causes of death on the part of some physicians, the Board feels that the aim of the National authorities will have been accomplished.

ISOLATION HOSPITAL.

During the year, in compliance with statutory requirements, an isolation hospital has been erected at Clark's Point, just south of the avenue leading to the Almshouse. It should be equipped at once and placed in readiness for the reception of patients. The Board feels that the city is to be congratulated upon the possession of a hospital for the care of patients afflicted with diphtheria or scarlet fever, who living in boarding houses and large tenement blocks endanger others, oftentimes being the innocent means of causing epidemics of those diseases. We believe its usefulness will be better appreciated as the people become better acquainted with its conveniences, situated as it is in a most healthful locality, with an abundance of pure air.

PUBLIC VACCINATIONS.

In compliance with law, this department has, during the year, vaccinated 950 children, 115 of which were obliged to be revaccinated.

PLUMBING INSPECTION.

The enforcement of the plumbing ordinance causes less and less friction as plumbers and householders learn by experience the aims and objects of such a law. During the past year, there have been conducted by the Examining Board, 11 examinations, and the following is a list of all who have been licensed as plumbers during the 12 months ending Dec. 31, 1904.

MASTER.

Jos. O. Savage, Thos. Gregory, Arthur Weeks, Thos. P. Knowles. John Hargraves, Herbert C. Reynolds, Alfred L. Belanger, Martin V. Cahoon, J. D. Elliott, · Wm. H. Mudge, Allen J. Searell, E. P. Hirst, Geo. J. Allen, Percy C. James, Jos. P. Rielly, Allan McAlpine, Edw. H. Gregory,

JOURNEYMEN.

Everett N. Tinkham, J. H. Benson, Zoeth Tripp, Dan'l McGrath, Edw. D. Lawton, Thos. Wareing, Herbert Bolton, Alonzo V. Jason, Jr., Wm. D. Hamel, Edw. Beauregard, John H. Lowney, Jeremiah McCarthy, Walter P. Bailey, J. W. Morris, Chas. H. Stowell, Chas. L. Allen, Chas. E. Mellor,

Wm. E. Searell, Sam'l R. Clark, Jas. E. McGoff, J. V. O'Neil, Jas. G. Hellyer, Jas. F. Collins, Azarie Bolduc, Michael L. Sylvia, H. J. Gurl, John N. Lowney.

REPORT OF MEDICAL INSPECTOR.

NEW BEDFORD, JAN. 1, 1905.

To the Board of Health.

Gentlemen: — I herewith submit my report as Medical Inspector from Jan. 1st, 1904, to Dec. 16th, 1904:

I have investigated 50 cases of scarlet fever, 52 cases of diphtheria, 59 cases of typhoid fever, 3 cases of measles, and 11 cases of a suspicious nature. Signed 39 death certificates, where there was no attending physician or the certificate of the attending physician could not be obtained before the burial of the deceased.

Respectfully submitted,

ALPHONSE NORMANDIN, M. D.

REPORT OF MEDICAL INSPECTOR.

NEW BEDFORD, JAN. 1, 1905.

To the Board of Health.

GENTLEMEN: — I herewith submit a report as Medical Inspector from Dec. 16th to Dec. 31st, 1904:

Investigated 3 cases of scarlet fever, 7 cases of diphtheria, and 2 cases of typhoid fever. Signed 3 death certificates.

Respectfully,

JOS. P. ST. GERMAIN, M. D.

REPORT OF BACTERIOLOGIST

To the Board of Health: -

Gentlemen: — I have the honor to submit the following report as Quarantine Physician for the year 1904:

Boarded 28 vessels arriving from foreign ports. One vessel, the Cabo de Verde, was quarantined as it had a suspicious case on board. Was released in three days, there being no developments.

Respectfully submitted,

J. T. BULLARD, M. D.

Quarantine Physician.

To the Board of Health: -

Gentlemen: — We herewith submit our report for the year 1904:

The average collection of garbage for the past year is 13,090,500 lbs. The number of dead animals was 350.

Yours respectfully,

NEW BEDFORD EXTRACTOR CO. Chas. S. Wheelwright, Mgr.

CITY OF NEW BEDFORD, IN BOARD OF ALDERMEN, February 9, 1905.

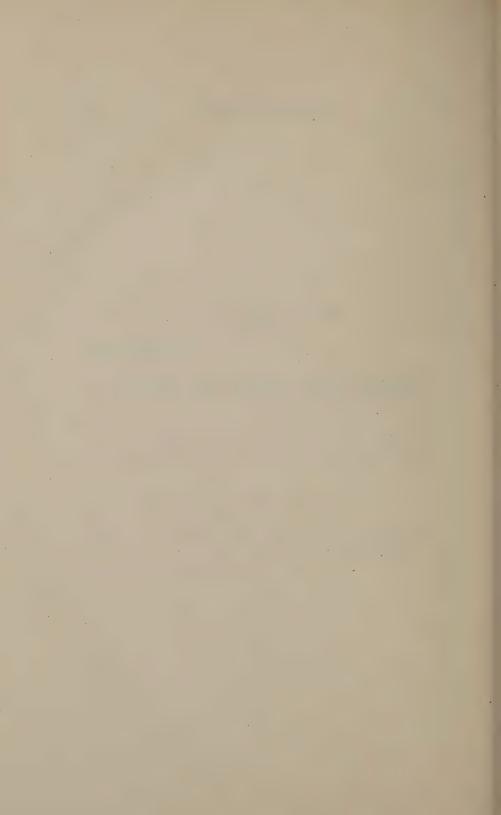

Received, ordered printed in the City Documents, and sent down for concurrence.

D. B. LEONARD, City Clerk.

In Common Council, February 9, 1905.

Concurred.

W. H. B. REMINGTON, Clerk.

CITY OF NEW BEDFORD,

OFFICE OF THE CITY AUDITOR,

April 13, 1905.

The Honorable, the City Council:

Gentlemen:—I have the honor to submit the annual report of the receipts and expenditures of the City of New Bedford for the financial year beginning on the seventh day of December, 1903, and ending on the fifth day of December, 1904; with a statement of the city debt, a schedule of the city property and the estimated value thereof, and other statements that have been deemed of interest.

Very respectfully,

CHARLES J. McGURK,

City Auditor.

AUDITOR'S REPORT.

April 13, 1905.

Concurred.

W. H. B. REMINGTON, Clerk.

ANNUAL REPORT

OF THE

COLLECTOR OF TAXES

FOR THE YEAR 1904

STATEMENT

OF THE

COLLECTOR OF TAXES.

CITY OF NEW BEDFORD,

COLLECTOR'S OFFICE,

December 15, 1904.

To the City Council of the City of New Bedford:

Gentlemen:—Herewith I present to you my account as Collector of Taxes of the City of New Bedford for the year ending at this date, together with an account of the receipts from the Commonwealth of Massachusetts for corporation and other taxes.

Respectfully submitted,

JAMES H. HATHAWAY,
Collector of Taxes.

STATEMENT FOR THE YEARS 1901 TO 1903.

| Years. | Unpaid Dec. 7, 1903 | Paid and Remitted. | Unpaid Dec. 15,1904. |
|--------|---------------------|--------------------|-------------------------|
| 1901 | \$3,715.82 | \$3,715.82 | |
| 1902 | 23,250.04 | 20,548.03 | \$2,702.01 |
| 1903 | 72,986 18 | 48,141.03 | 24,845.15 |
| | \$99,952.04 | \$72,404.88 | \$27,547.16 |

TAXES, 1904.

| State tax | | | \$ 49, 6 25.00 | |
|------------|----|--|------------------------------|----------------|
| Armory tax | *. | | 8,777.22 | |
| County tax | | | 104,226.58 | |
| City taxes | | | 1,089,734.00 | |
| Overlay | | | 4,323.53 | \$1,256,686.33 |

PAYMENTS.

| State tax | \$49,625.00 | | |
|--------------|------------------|---------------------|----------------|
| Armory tax | 8,777.22 | \$5 8,402.22 | |
| County tax | | 104,226.68 | |
| City tax | | 990,894.27 | |
| Abatements l | by the Assessors | 15,027.50 | |
| Balance unpa | id Dec. 15, 1904 | 88,135.66 | \$1,256,686.33 |
| | | | |

About 7 per cent. of the taxes of 1904 now remain unpaid; this is \$15,149.48 in excess of the previous year.

The resident National Bank taxes collected and paid to the Commonwealth for 1904 were as follows, viz.

| First National Bank | \$14,540.37 |
|-------------------------|-----------------------|
| Mechanics National Bank | 8,452.00 |
| Merchants National Bank | 17,995.78 \$40,988.15 |

The amounts received from the State Treasurer for corporation and other taxes were as follows, viz.:

| Corporation taxes | \$56,234.78 | |
|-------------------------|---------------|----------|
| Non-resident bank taxes | 2,930.29 | |
| Street railway taxes | 13,947.31 \$7 | 3,112.38 |

The sum received in 1904 for corporation taxes, \$56,234.78, was \$17,931.26 less than for the previous year, due to the change made in the law by the Legislature of 1903.

| Total number of polls in 1904 | 18,093 |
|-------------------------------|--------|
| Collected to date | 12,660 |
| Uncollected at this date | 5,433 |

About 30 per cent. now remain unpaid.

Examined and found correct:

FRANK W. FRANCIS, SAMUEL HIGHAM, WILLIAM K. LEES,

Sub-Committee of the Committee on Finance, to examine the Treasurer's, Collector's and Auditor's books.

In Board of Aldermen, April 13, 1905.

Received, ordered printed in the City Documents and sent down for concurrence.

D. B. LEONARD, City Clerk.

In Common Council, April 13, 1905.

Concurred.

W. H. B. REMINGTON, Clerk.

ANNUAL REPORT

OF THE

CITY TREASURER

FOR THE YEAR 1904

REPORT.

CITY OF NEW BEDFORD, MASS.,

TREASURER'S OFFICE,

December 15, 1904.

To the City Council of the City of New Bedford:

Gentlemen: — As required by the Ordinances of the City of New Bedford, I herewith present a statement of my accounts as City Treasurer for the financial year ending at this date.

Very respectfully,

JAMES H. HATHAWAY,
City Treasurer.

Respectfully submitted,

JAMES H. HATHAWAY,

Treasurer of Sinking Funds.

REPORT

OF THE

Commissioners of the Sinking Funds.

CITY OF NEW BEDFORD,

TREASURER'S OFFICE,

January 2, 1905.

To the City Council of the City of New Bedford:

GENTLEMEN: — At a meeting of the Commissioners of Sinking Funds of the City of New Bedford, held this date, it was

VOTED — To adopt the foregoing stetement of the Treasurer of the Sinking Funds as the report of the Commissioners of the Sinking Funds of the City of New Bedford, required by the Statutes of the Commonwealth of Massachusetts, to be made annually to the City Council.

[Signed]

MORGAN ROTCH,
WM. A. MACKIE,
BENJ. F. BROWNELL,

Commissioners of the Sinking Funds.

We have examined the foregoing account and find it correct.

FRANK W. FRANCIS, SAMUEL HIGHAM, WILLIAM K. LEES,

Sub-committee on Finance to examine the Treasurer's, Collector's and Auditor's accounts.

In Board of Aldermen, April 13, 1905.

Received, ordered printed in the City Documents and sent down for concurrence.

D. B. LEONARD, City Clerk.

In Common Council, April 13, 1905.

Concurred.

W. H. B. REMINGTON, Clerk.

ANNUAL REPORT

OF THE

SUPERINTENDENT OF STREETS

OF THE

City of New Bedford

TO THE -

FOR THE YEAR 1904

New Bedford, Mass.
The A.E.Coffin Press, City Printers.
1905.

Report of Superintendent.

Office of the Superintendent of Streets, Odd Fellows' Building, January 1, 1905.

To the City Council of the City of New Bedford:

GENTLEMEN: — The annual report of the work of Sewer and Street Departments for the year ending December 3, 1904, is herewith submitted.

The constantly increasing requests for street improvements received by the Board of Aldermen render a careful inspection of localities necessary to determine the desirability of the improvements asked for. Citizens who have improved property on outlying and unimproved streets look for the same consideration at your hands as those who are more favorably situated nearer the center of the city.

The question of how much money should be allowed the department, and where this money should be spent to secure the greatest good of the public, is one which you have constantly to consider. The requests are far in excess of the abilities of the department.

The mileage of accepted streets is sufficient for a population many times greater than we have at present.

Requests for the acceptance of new streets are frequently made for the purpose of making land salable

which has been bought in large areas at a low price, and after being divided into lots is offered for sale at a figure tempting to the individual of moderate means.

A few lots sold, and a few houses built on streets laid out under these circumstances, immediately brings a call for the streets to be graded, guttered, sewered and macadamed, requiring a very large outlay by the departments.

A too liberal policy under such circumstances only invites a continued practice of this method, and it seems only fair that outlying, unimproved areas should wait till such time as the growth of the city requires their development.

The burden of expense on the public for this undue development is not carried entirely by this department, but is felt by the Water, the Fire and the School Departments as well.

In many cities streets are not accepted until the owners of abutting property have made these improvements. While it may not be best to institute this rule in our city, it would seem that a street might at least be graded and made passable before being accepted.

The present condition of our streets is better than at any previous time, and this condition can be maintained so long as a large part of our annual appropriation is applied to the maintenance of our main thoroughfares.

A comparison of the present extent of some of the principal features of improved streets with the same features ten years ago may be interesting, and the following table is made up from the records.

| | | 1894. | 1904. | Increa | se. | |
|---------------------|--------|--------|--------|----------|-----|-------|
| Accepted streets, n | niles, | 120.00 | 144.63 | 20 | per | cent. |
| Macadam, | 6.6 | 31.94 | 65.31 | 104 | 6.6 | 6.6 |
| Block paving, | 66 . | 1.75 | 4.96 | 183 | 6.6 | 6.6 |
| Asphalt block, | 4.6 | 0.00 | 0.62 | | | |
| Bitulithic, | 6.6 | 0.00 | 1.39 | | | |
| Cobble paving, | | 16.29 | 13.26 | minus 19 | 6.6 | 6.6 |
| Curbing, | 66, . | 68.10 | 101.62 | 49 | 6.6 | 6.6 |
| Concrete sidewalk, | 46 , 1 | 22.78 | 34.26 | 50 | 4.6 | 4.6 |
| Granolithic, | 4.6 | 0.11 | 5.64 | 413 | 6.6 | h 6 |
| Sewers, | 6.6 | 49.89 | 72.11 | 44 | 6.6 | 6.6 |
| Catch basins, | 6.6 | 604.00 | 945.00 | 56 | 6.6 | 6.6 |
| Population, | | 55,590 | 71,000 | 28 | 6.6 | 6.6 |

In the Sewer Department the greatest present needs are for enlarged surface water sewers and the extension of some of the outlets to deeper water.

The tables which follow give in detail the work done and the cost of same.

Respectfully submitted,

C. F. LAWTON.

1904.

NEW BEDFORD, MASS.

Population, assessors' estimate, 71,000.

Valuation, \$63,608,350.00.

Area, about $19\frac{1}{3}$ square miles.

144.63 miles of accepted streets.

Two bridges over the Acushnet river. New bridge, 70 feet wide and $\frac{9}{10}$ miles long. Completed, but cost not yet apportioned; $\frac{3}{4}$ Coggeshall Street bridge maintained by New Bedford.

4.958 miles of stone block paving, an area of 64,101 square yards.

0.617 miles of asphalt block paving, an area of 9,929 square yards.

0.35 miles of sheet asphalt paving, an area of 10,891 square yards.

0.34 miles of brick paving, an area of 9,276 square vards.

13.26 miles of cobble paving, an area of 168,040 square vards.

65.31 miles of macadam paving, an area of 812,409 square yards.

 $1.89~\mathrm{miles}$ of 'Bitulithic," an area of $28{,}498~\mathrm{square}$ yards.

101.62 miles of curbing.

33.75 miles of flag sidewalk, an area of 101,691 square yards.

34.26 miles of concrete sidewalk, an area of 152,898 square yards.

5.64 miles of granolithic sidewalk, an area of 27,352 square yards.

72.113 miles of sewer, 8 to 72 inches diameter.

\$1,074,242.54, cost of sewer system to date.

945 catch basins.

113 eyeholes.

689 sewer manholes.

29 sewer outlets and 3 surface drain outlets into Acushnet river.

4 sewer outlets into the lower harbor.

7 sewer outlets into Clark's Cove.

| | , |

A full set of blue prints of the plats, 137 in number, is furnished the Board of Assessors in May of each year. From time to time these "plat prints" are corrected to show the changes made by transfers of property, and the changes in ownership are also made on the card index in the Assessors' Office.

During the year the records of 86 estates have been looked up in the Probate Court at Taunton and the changes in ownership reported to the Assessors.

62 new tracings of plats have been made to replace old tracings.

Dec. 1, 1904, there were 15,732 lots shown on the plats, being 269 more than on Dec. 1, 1903.

FREIGHT AND IMMIGRATION SHED.

On City Wharf, foot of Union street.

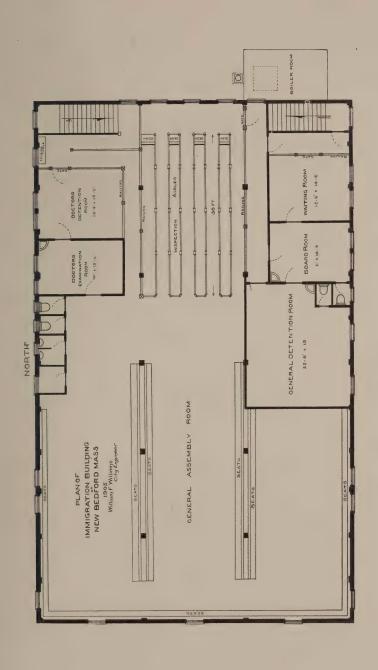

The grading of the City's Wharf at the foot of Union street was completed this year.

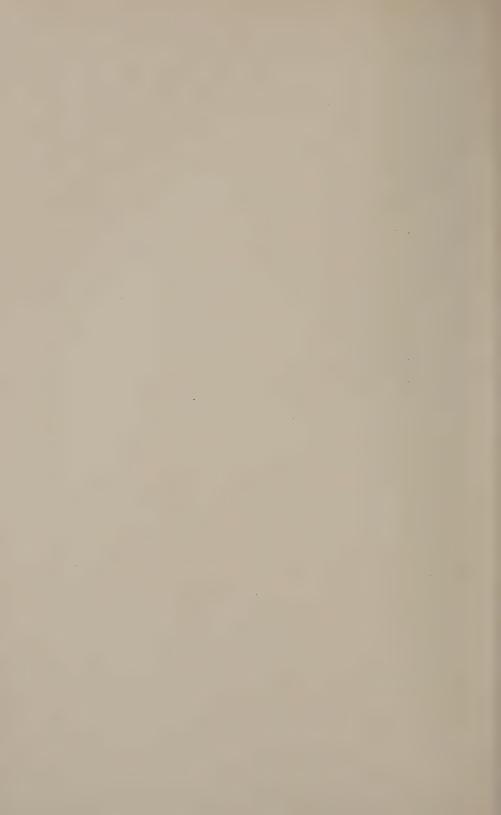

The berth on the north side of the wharf was also dredged about 20 feet wider for the accommodation of the steamships "Peninsular" and "Patria" which land their passengers at this port on their westward trip from the Western Islands.

The cost of improving this wharf to date has been as follows:

| Spent in | 1903 | for | construction, | \$13,900.91 |
|----------|------|------|------------------|-------------|
| 16 7 | 6.6 | 66 | dredging, | 2,167.60 |
| 6.6 | 1904 | 6.6 | moving building, | 10.00 |
| 66 - | 4.6 | 6.6 | construction, | 32.92 |
| 6.4 | 6.6 | 6.6 | dredging, | 280.25 |
| 6.6 | | | grading, | 644.16 |
| 46 | 4.6 | . 66 | water pipe, | 246.01 |
| | | | | |
| | | | | \$17,281.85 |

The latter part of 1903, plans were prepared for a building on the outer end of this wharf to be used for the receipt of freight and the examination of immigrants. The building is 58 feet wide by 96 feet long, the east half two stories in height and the west half one story. With the exception of the boiler room, the building is built entirely of wood, "Mill Construction type," with no air spaces in floors, ceilings or side walls. The upper story is designed for the examination of immigrants and is reached from the wharf level by two wide stairways within the building. The arrangement of this story was designed in accordance with the directions of the Commission of U. S. Immigration Service at Boston. After the building had been used several times, the local officials of

the Immigration Service requested that the second story be extended the entire length of the building to give more room. This has since been done, and the work will be completed early in the year 1905.

The following proposals were received Dec. 23, 1903, for the construction of the Freight and Immigration Shed, including heating and plumbing:

| Z. B. Davis, | • | \$8,369 |
|---------------------|---|---------|
| H. T. Bulman, | | 8,875 |
| H. McB. Smith, | | *8,943 |
| Chas. O. Brightman, | | 8'967 |
| Frank B. Sistare, | | 10,700 |
| Moore & McKay, | | 11,247 |
| Martin H. Sullivan, | | 12,100 |

The contract was given to Z. B. Davis, Dec. 30, 1903, and was completed July 8, 1904.

The cost of the shed was as follows:

| Z. B. Davis, contract, | \$8,369.00 |
|-----------------------------|------------|
| Z. B. Davis, extra work, | 158 98 |
| Advertising, | 24.37 |
| Electric lights and wiring, | 114.94 |
| | |
| Total. | \$8,667,29 |

Oct. 26, 1904, the following bids were received for raising the roof of the west half of the Immigration Shed so as to provide a second story the entire length of the building:

| H. T. Bulman, | \$2,195 |
|----------------|---------|
| H. McB. Smith, | 2,750 |
| Z. B. Davis, | 2,810 |
| Moore & McKay, | 3,250 |

The contract was given to H. T. Bulman.

The total cost of the construction of the wharf and immigration shed will be approximately as follows:

| Construction of wharf, | \$17.281.85 |
|------------------------------|-------------|
| Construction of shed, | 8,667.29 |
| Enlarging shed, (contract), | 2,195.00 |
| Extra work on last contract, | 20.00 |
| | |
| | \$28,164,14 |

SEWERS.

The conditions now existing at many of the outlets of the sewers should be changed. The deposit of sewage is rapidly shoaling the water in front of practically all of the outlets, preventing the free flow of the sewage into deeper water. The following sewers are in immediate need of relief:

Washburn street sewer outlet should be extended several hundred feet to reach the moving water of the channel. It now discharges near the head of a small cove with a large area of mud flats exposed at low tide between the outlet of the sewer and the channel. A small creek or arm of the cove, just north of the sewer, should be filled in.

Merrimac street sewer should either be extended to deeper water or a channel dredged from the main ship channel to the outlet of the sewer. A bar has formed in front of the outlet, which at low tide forces the sewage to follow a circuitous route through exposed mud flats to reach the channel off Willis Point. The filling of the cove between Wall street and Merrimac street, while a very desirable improvement, is partly responsible for the creation of the mud flats near the outlet of the sewer because the fill pushes the mud out of the cove.

The Dartmouth Manufacturing Company has recently received a license from the Harbor and Land Commissioners to fill several hundred feet into the river in front of their property from Cove street to Gifford street. This will require the extension of the Gifford street sewer to the face of the fill.

County street sewer now discharges about 100 feet inshore of the ordinary low water line. The sewer should be extended at least 125 feet to relieve the nuisance now created by the sewage flowing over such an exposed stretch of beach.

The rapid shoaling of the water at the head of Clark's Cove will require future extensions of this sewer and also of the others, but there seems to be no other relief for this situation as long as the sewers are discharged into this body of water.

The work of the department for the past year is so fully and systematically shown in the tables attached that further explanation as to what has been done, seems to me unnecessary.

In closing, I wish to thank the many citizens and members of the City Council and of other departments who have from time to time assisted this department.

Respectfully submitted,

WILLIAM F. WILLIAMS,

City Engineer.

Grades for all sewers, measurements of branches, ledge, etc.

Branches located for connecting drains.

Plans for construction of 19 new sewers.

Location and record of drains laid during the year,

Measurement of all street work done by the department.

Street and sewer maps corrected to date.

Assessment plans of sewers made.

Sewer plans entered in sewer book.

Copies of street layout plans furnished for filing in Registry.

Soundings and profile along line of Manomet and Hathaway street sewers to determine length of piles and nature of foundation required.

Lists of abutters furnished for all street, telephone, etc., hearings. Location of telephone conduits, etc., laid during year.

Investigation made as to cause of flooding of following districts:

Water and Cannon streets.

Belleville road and Acushnet avenue.

Jean and Coggeshall streets.

Bowditch, Acushnet avenue and Front streets, north of Sawyer to Tallman.

ASSESSORS.

Survey to correct plats at following places:

Hathaway Road.

North of Plainville Road.

East of Acushnet avenue at angle No. 20.

S. e. cor. Fourth and Spring.

S. e. cor. Elm and Pleasant.

N. s. Washburn street at Belleville avenue.

W. s. Pope's Island.

N. s. Durfee street, west of Cedar.

Old Market Square.

Foot of Howland street.

Gas Company property, south of Coffin street.

All mill changes put on special plans.

City Coal Company's wharf.

North of Wall street, east of railroad.

Office maps of streets and sewers corrected to date.

BOARD OF HEALTH.

Maps of streets and sewers corrected to date.

CEMETERY BOARD.

Plat books posted for the year.

PINE GROVE CEMETERY.

Preliminary staking and grades for section L.

Lots staked in section L.

Lots staked in section I.

Lots staked in section F.

4 lots staked in section J.

Lines and grades for foundation for water tower.

Plans of sections L, I and F.

OAK GROVE CEMETERY.

Grade for south wall and avenue.

Grades for a portion of section 3.

Staked out 42 lots in section 3.

Plan of section 5.

RURAL CEMETERY.

Survey, plans, and staking arrangement of monument and grades in lot section M.

Survey of property for new entrance at Dartmouth street.

Lots staked in sections D and H.

Grades section D.

Staked lot and tomb section A.

Survey of lots on North Circuit avenue for curbing.

Preliminary plan for development of section A.

Plans of sections H, M, A3, A4, A5, W, V, O, L2, and G.

COMMITTEE ON CLAIMS.

Survey and plans, showing sidewalk and trees on Water street, east side, south of Gifford.

PUBLIC PROPERTY COMMITTEE.

Levels, plan and grades for walks and grounds of Parker Street School.

Grades and lines for drains Isolation Hospital.

Cross section and plans for driveways, and grading grounds of Isolation Hospital.

Measurements of lot and building of Ward Room, Fourth street.

Survey of Armory lot.

Survey and plan of lot and buildings used as police stable.

Survey levels and plan for grading grounds of Acushnet School (Clifford).

Cross section and plan of Pumping Station lot.

Survey and plan of South Street School lot.

COMMITTEE ON WHARVES.

Plans, lines, grades, and inspection for construction of addition to Immigration Shed.

Soundings in docks north and south of Taber's Wharf.

COMPLETION OF NEW BEDFORD AND FAIRHAVEN BRIDGE.

General plan of bridge and adjoining streets.

Map, showing roads of Bristol and Plymouth Counties.

Laid out beds for shrubbery at Park, bridge approach.

GRADE CROSSINGS.

Survey of shore line Willis Point.
Plans and figures furnished for hearings.

INSPECTOR OF BUILDINGS.

Lines given for 167 buildings, steps, etc.
Grades given for 247 buildings, steps, fences, etc.
Staked out, set batters, gave floor levels, drain levels, measured extras, etc., at

Kempton Street Engine House. South Street School-house. Coggeshall Street School-house.

PARK COMMISSION.

Plan of iron fence on south wall of roadway Buttonwood Park.

Topographical survey of south-west section of Buttonwood Park and plan of same furnished for landscape architects.

Plans for an entrance to Buttonwood Park at Court street.

Location and plan of walks from Rockdale avenue, west.

Line and grade for setting 2 flights of stone steps at Buttonwood Park.

WATER BOARD.

Lines for laying pipe, 2 Grades for laying pipe, 10 Index map of plats. Survey of conduit line.

Nye to Deane.

Acushnet avenue, Tallman and Bowditch.

South of Holly street.

Plats of city on 60 scale for pipe plans.

Survey, soundings, plan, etc., for location of water pipe across channel of Acushnet River, south of the bridge.

MISCELLANEOUS.

SURVEYS.

Harbor line, between New Bedford and Fairhaven, marked on new bridge.

Measurements to determine clear headroom Coggeshall street bridge. Survey to locate car tracks, poles, etc., at angle No. 20 Acushnet avenue.

Survey to determine area of block paving to be laid Brook street. Survey of south line Elm street, Purchase to Acushnet avenue, to establish line.

Survey of Commercial street, Front to Water, to establish lines and set bounds.

Survey County street, east side, south of Thompson, to locate angle. Location of bulkhead on south line of Pairpoint property.

Location of brook from Norman street to the River near Rodney st. Survey to connect Cove and Water streets and West French avenue. Location of culverts on Kempton street, west of Rockdale avenue.

LEVELS.

Acushnet avenue, w. s., south of Blackmer, to establish grade of driveway.

Acushnet avenue, w. s., south of Coggeshall, to establish grade of walk for building.

Acushnet avenue, e. s., south of Marvin, to establish grade of walk for building.

Bowditch, north of Weld, to determine cause of flooding of cellars. County and Sixth, north of junction, to establish grade of walk for building.

Fish Island, north of bridge, to establish grades for driveways.

Pleasant, n. w. corner Elm, to establish grade of walk for building.

Wamsutta, n. s., east of Acushnet avenue, on catch basin and ponds to determine method of drainage.

Water and Cannon, on streets and in lots, to determine cause of flooding in heavy rains.

BOUNDSTONES.

Acushnet avenue, n. w. corner Sawyer. (Lowered).
County, w. s., south of Spring. (Lowered).
First, n. e. corner Potomska. (Raised).
Hope, s. e. corner Whitman. (New).
Hope, s. w. corner Eugenia. (New).
North, n. s., 93.34 ft. east of Beach. (Lowered).
Purchase, n. e. corner Willis. (Raised).
Purchase, s. e. corner Weld. (Raised).
State, s. e. corner Franklin. (Raised).
State, s. w. corner Clark. (Lowered).
State, s. w. corner Penniman. (Lowered).
Thatcher, n. e. corner Grit. (New).
Water, s. e. corner Delano. (Raised).
West French avenue, s. w. corner Grit. (New).

PLANS AND PROFILES.

Plan of Water Works conduit and adjoining property, Coggeshall street to Belleville road.

Map of city on 400 scale corrected.

Correcting drain maps.

Plan of Middle and Water streets, showing pipes, etc.'

Plan of Middle and Second streets, showing pipes, etc.

Correcting large maps of streets and sewers in Council chamber.

Ward maps made up.

Profile of East French avenue, Butler to David, to establish grade.

Profile of gutters, River road.

Profile of Morton's Court.

Profile, showing marsh and soundings Hathaway street.

Meteorological Record kept for year 1904.

HARBOR.

Soundings east and south of Commercial Wharf, to locate any obstruction in channel.

Soundings east of Taber's wharf.

Soundings at foot of Howland street for bulkhead

Grades to set tide boards for dredging.

Inspection of dredging Coffin street dock.

Maxfield street dock.

Levels to check height of tide gauge.

Plan of city and river showing harbor lines.

Map of city, showing manufacturing plants for hearing before "Committee on Rivers and Harbors."

CITY OF NEW BEDFORD,

IN BOARD OF ALDERMEN,

January 26, 1905.

Received, ordered printed in the City Documents, and sent down for concurrence.

WM. S. COOK, Ass't City Clerk.

In Common Council, January 26, 1905.

Concurred.

W. H. B. REMINGTON, Clerk.

Twelfth Annual Report

OF THE

Superintendent of Public Buildings

ALSO,

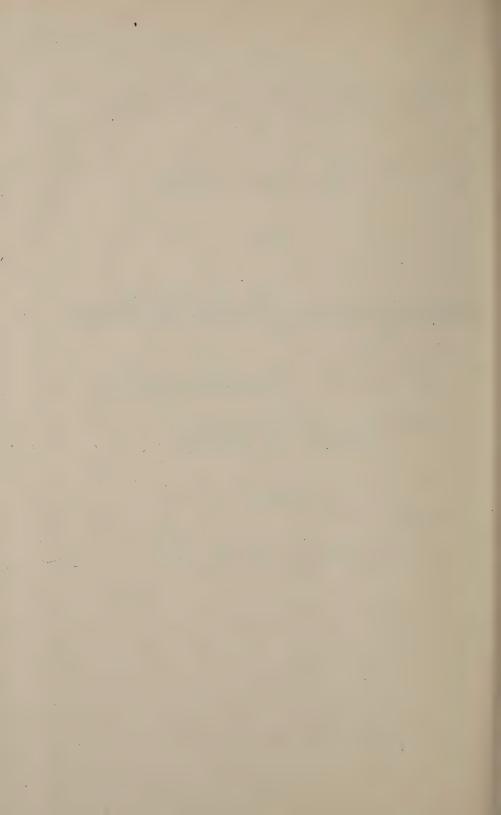

Inspector of Buildings

OF THE

CITY OF NEW BEDFORD, MASS.

For the Year 1904.

New Bedford, Mass. The A.E. Coffin Press, City Printers. 1905.

REPORT

OF THE .

Superintendent of Public Buildings.

Office of Superintendent of Public Buildings, New Bedford, Mass., Dec. 31, 1904.

To His Honor the Mayor and the City Council:

Gentlemen:—In submitting the twelfth annual report of the work performed under my supervision, I beg to outline the following summary.

ISOLATION HOSPITAL BUILDINGS on Almshouse 'Grounds.

A general description of this group of wooden buildings will be found in my report for 1903; the buildings were completed and accepted in September, 1904. Certain extra work, some of which was ordered and executed while the buildings were in progress, and some of which was ordered after the main contracts were completed, are given with the total cost as follows:

| General contract for buildings, | \$27,724.00 |
|--|-------------|
| Extra work on buildings, | 1,898.50 |
| General contract for heating and ventilating (steam), | 8,592.00 |
| Extra work on same (covering steam pipes), | 285.00 |
| Window weather strips (seperate contract), | 587.95 |
| Water supply and for fire purposes by Water Department | 826.67 |
| Architects' fees, | 1,283.17 |
| Total cost to date, | \$41,197.29 |

The buildings, including the last items of extra work, are about completed and ready for use; the grading and fencing of the grounds are not included in the above schedule.

When the heating plant was so far installed, that it could be used to dry the buildings before the plastering was begun, and during the progress of finishing the interior, the heating system being of a somewhat complicated nature, owing to the group of buildings to be heated from a central plant, the services of a practical steam fitter were required to take charge of the work.

For this purpose, Mr. James W. Welch was employed by the city last June. Mr. Welch is still in the city's employ, his time being divided between this work and looking after the heating and ventilating plants to be installed in the new schools now building, and the heating of the new fire station on Kempton street; he has also made some repairs in other city buildings.

FIRE STATION.

This building, now in course of erection on Kempton and Reed streets, is roofed in and ready for plastering; the heating plant is now being installed; the contract price is \$21,348.50. This includes a completed building, including heating by steam, also grading, curbing and fencing the grounds, but does not include walks and driveways. A description is given in last year's report.

IMMIGRATION SHED WITH ADDITION THERETO.

This building of wood is located on City Wharf, was designed by Wm. F. Williams, City Engineer, and was completed in the early summer; an addition thereto being found necessary, the same was placed under contract last October, and is now about completed.

| Contract price for main buil Contract price for addition, | ding, \$8,369.00 2,195.00 |
|--|------------------------------|
| | |
| Total, | \$10,564.00 |

SOUTH STREET SCHOOL.

This school building, now in course of erection, is located on South and Fourth streets and Acushnet avenue. Plans were made by S. C. Hunt, architect. Contractors for building, John B. Sullivan & Son. Contractors for heating and ventilating, W. H. & J. F. Whalen of Fall River. The building is to be two stories and basement, and is to be constructed of red smooth-cut brick, in appearance nearly equal to pressed brick, but of a much less price, with granite trimmings, steps and foundations, slated roofs, copper gutters, conductors, hips, ridges, valleys and flashings, brick and copper cornices.

The building will have 12 class rooms, with principal's and teachers' rooms, toilet and lavatories on both floors, also stock rooms; the school toilets will be in basement; the basement floor will be of concrete and Portland cement; the corridors' walls will be of smooth brick, painted in dark and light colors; the walls and ceilings will be done in hard plastering, tinted as desired; the interior wood finish and doors will be of the best quality soft grained cypress, finished in the natural wood; door

and window casings are eliminated, steel angle beads being used instead, after the style of our recently erected schools, the effect being much better, cleanliness easier assured, and quite a saving made in expense; the finished floors, stair treads and risers will be of the best rift Georgia hard pine; rails and cappings to be of clear, plain oak; all class rooms have double windows permanently fixed in the frames; the plumbing will be of the open style, the best plain, durable, well ventilated closets and ranges being used.

The heating will be of steam, supplied by two horizontal tubular boilers of ample capacity; the ventilation will be by gravity, through well heated all vertical flues; this system has been found to work quite satisfactory in some of our recently erected schools.

While this building cannot be said to possess many ornate or fanciful exterior features, it does possess a neat, common sense, durable exterior, and what is most essential in the class rooms, ample light and heat and good ventilation is provided.

The contracts were let on Sept. 21, 1904.

| Contract price for building, Contract for heating and ventilating, | \$51,900.00 5,133.00 |
|--|-------------------------|
| Gross total, A rebate of \$150.00 is to be made on the building | \$57,033.00 |
| contract for a change made in corridor brick, | 150.00 |
| Architects' fees, as paid, | \$56,883.00 1,425.83 |
| Net total, | \$58,308.83 |

The building contract includes the curbing and grading of lot, but does not include the walks; the building is to be completed on or before Sept. 1st, 1905.

COUNTY STREET SCHOOL.

This building, designed by S. C. Hunt, architect, is located on the pumping station lot, corner of County and Coggeshall streets; the contracts were let on Sept. 21, 1904; the building is to be completed on or before Sept. 1, 1905.

The original design called for a 16 room school, and contracts were made on that basis; after the work had progressed as far as the first floor, it was decided to add a third story in the central section for an assembly hall, and supplementary contracts were entered into, the contractors in both cases being Herbert A. Miller for the building, and the New Bedford Boiler & Machine Co., for heating and ventilating.

The building is two stories and basement, hall section three stories, built of a good grade of common red sand struck brick, laid in white mortar. The foundation walls, entrance steps and underpinning course at grade will be of granite; all other stone trimmings above steps and grade course will be of Bedford Indiana limestone: the roof on hall section will be supported by four steel trusses of clear span; the main cornices are to be of the best white pine lumber; main gutters lined with copper, and copper used throughout as described in the new South street school: the pitched roofs are to be covered with the best Maine slate, full | inch thick; flat roofs covered with best M. F. roofing tin; the arrangement and finish of the interior, also the heating and ventilating, will be the same as described in the South street school. The assembly hall in the third story is designed for 810 sittings, outside of the stage and two dressing rooms; stand pipes and fire hose are to be provided in the corridors of every story, to be ready for instant use in case of fire; this provision is made in all the schools built in recent years.

This is the largest school building yet erected by this city for grammar school purposes; the elevations show a pleasing design, the introduction of gray limestone trimmings with plain red brick and black slate roof, making a combination that is pleasing to a degree; the grading and curbing of the grounds are not provided for in the contracts.

The contract price and appropriations are as follows:

| * | |
|--|-------------|
| Original contract for building, | \$68,439 00 |
| Extra cost of foundations, agreed upon, | 210.44 |
| Supplementary contract for assembly hall, | 8,500.00 |
| Original contract for heating and ventilating, | 7,700.00 |
| Appropriations for heating assembly hall, | 1,262.00 |
| Gross total, | \$86,111.44 |
| A rebate of \$300,00 is to be made in the building | |
| contract for a change made in corridor brick, | 300.00 |
| | \$85,811.44 |
| Architects' fees, as paid, | 2,664.87 |
| Net total, | \$88,476.31 |
| | |

The \$1,262.00 appropriated for heating the assembly hall, is the amount estimated by the Supt. of Buildings. The contractor wanted \$1,850.00 for this work; no price having been agreed upon, the work is to be done by the contractor as extra work, the cost to be determined as provided for in the original contract.

SCHOOL COMMITTEE OFFICE.

An addition one story high has been built south of the stock room, which gives much needed room for the storage of school supplies.

SCHOOLHOUSE WORK.

At the Harrington school, I desire to repeat what I recemmended in my last report, that is, that the further use of the exhaust fan in the tower be dispensed with, because of the danger from fire. I am satisfied that good ventilation can be provided by gravity, by having the vent flues properly heated at the base of the flue with steam coils, instead of using the exhaust fan.

The supply fan in the basement is run by electric power; this power is rather expensive. Now that our increased water supply gives sufficient pressure to use water power, I would recommend that the water power be substituted; the cost of making the change would be no more than what the city pays for electric power in one year, besides, an element of danger from fire would be eliminated.

The Clark street school yard is still ungraded and is in very bad shape; this school was completed and opened eight years ago. I have in former reports called attention to the necessity of grading, curbing and building the necessary retaining walls and fence; plans for this work were prepared by Mr. Samuel C. Hunt, architect, six years ago, and proposals for the work were received by the committee on city property; these plans are still available on file in this office.

The school yard of the William H. Taylor school on Brock avenue has never been graded; the school was completed and occupied six years ago. There is no earth filling required, but the lot, curbing and walks and grading is much needed; there is much complaint on the part of parents and others interested in the school at the unfinished and muddy condition of the premises. I have called attention to this in former reports.

GENERAL REPAIRS.

The committee on city property and the school committee have had the usual ordinary repairs made on different buildings in their charge, leaving the city buildings in unusually good repair.

CARE AND MANAGEMENT OF STEAM BOILERS.

Steam heat being used in nearly all our city buildings, it is important that the management and care of boilers and of the heating and ventilating plants in school buildings should be in intelligent hands. In some cases the business is new to the janitors in charge, and they labor under many disadvantages while becoming familiar with their work, the result being that the plant is liable to be mismanaged and improperly handled.

I believe that it would be economy for the city to employ a capable man to have full charge of the heating and ventilating plants, and of all of the boilers used for heating purposes, one whose duty it would be to instruct the janitors in their work and who would do the ordinary repairs required. Such a man, James W. Welch, is now in the city's employ; his services might well be availed of.

CUSTODY OF PLANS OF CITY BUILDINGS.

Since the office of superintendent of public buildings was established by city ordinance some eleven years ago, a full set of plans and a copy of the specifications, for all city buildings whether erected or not, have been kept on file in this office; there are many good reasons why this should be done; the plans, etc., have frequently been found quite useful for reference purposes.

All architects employed by the city during the last eleven years, have, without question, furnished such plans and specifications; this year, however, the architect who made the plans for the proposed new high school building, has so far refused my request for the first set of plans and specifications, that were accepted and paid for early in the year, to be kept on file in this office.

These plans, and the second set referred to, although promised, have not yet been furnished.

SCHEDULE OF CITY BUILDINGS.

The following tables give a schedule of buildings owned by the city, their location, when built or acquired, valuation of land and valuation of buildings.

I desire to express my thanks to His Honor the Mayor, and to the different Committees of the City Council, and to the School Committee for their kind co-operation and support in carrying out the work in my charge.

Respectfully submitted,

EDMUND O'KEEFE, Supt. Public Buildings.

REPORT

OF

Inspector of Buildings.

Office of Inspector of Buildings, New Bedford, Mass., Dec. 31, 1904.

BUILDING STATISTICS FOR 1904.

Total number of building permits granted during the year for new buildings, alterations, additions and repairs, was 541, at an estimated cost of \$1,575,552.04, classified as follows:

| | No. permits | Estimated cost |
|---|-------------|----------------|
| New dwellings (including stores and | Permits | 2000 |
| dwellings combined), | 210 | \$648,400 |
| New buildings for manufacturing business | | |
| and storage purposes, | 12 | 437,500 |
| Buildings for religious purposes, | 1 1 | 100,000 |
| Buildings for purposes of halls, . | 1 1 | 8,000 |
| Buildings for purposes of workshops, | | |
| offices, and one story stores, | 24 | 18,000 |
| Alterations and repairs, | 183 | 87,950 |
| Miscellaneous buildings, including barns, | | |
| sheds, buildings moved, etc., | 110 | 36,550 |
| | 541 | \$1,336,900 |

CITY BUILDINGS.

| County street schoolhouse, | \$88,476.31 | |
|--|-------------|----------------|
| South street schoolhouse, | 58,308.83 | |
| Fire station, Kempton and Reed sts., | 21,348.50 | |
| Immigration shed, city wharf, | 10,564.00 | |
| Isolation hospital, city farm, | 41,197.29 | |
| Alterations and repairs to schoolhouses and other city buildings, | 18,757.11 | 238,652.04 |
| Total, | | \$1,575,552.04 |
| Number of tenements added, including tenements in buildings altered, | 447 | |

CLASSIFICATION OF DWELLINGS ERECTED.

| One tenement each, | | 82 | |
|--------------------|--------|---------|------|
| Two ter | iement | s each, | . 51 |
| Three | 6.6 | 66 | 67 |
| Four | 6.6 | | 5 |
| Five | . 66 | 66 | 1 |
| Six | 6.6 | 6.6 | 4 |
| | | | |
| | | | 210 |

Of the 447 new tenements added during the year, 308 contained bath rooms or nearly 70 per cent. of the total, showing an increase each year of a better class of tenements erected.

Prominent among the buildings for which permits were granted the past year, were the following:

Kilburn mill, St. James Catholic church, County street school, South street school, West end fire station, New England Cotton Yarn Co., storage shed; New Bedford Extractor Co., garbage plant; Manomet mill, storage shed; Beacon Mfg. Co., addition to factory; Immigration shed, city wharf.

COMPARISON OF 1903 AND 1904.

| | 1903 | 1904 |

| 1902 | 470 | 1,968,840 | 164 | 354 |
| 1903 | 608 | 1,984,871 | 252 | 578 |
| 1904 | 541 | 1,575,552 | 210 | 447 |
| | 6,160 | \$15,525,180 | 2,199 | 4,791 |

Twenty-six notices were sent out by the inspector during the year for various violations of the building laws, such as unsafe chimneys, unsafe and neglected buildings, etc. Eighteen of said cases were adjusted at the office of the inspector, and eight were brought before the committee on buildings for their action.

Section 45, Chapter 481, of the Public Statutes, Acts of 1904, provides that the inspector of buildings shall, in the month of May of each year, inspect every room of every hotel and lodging house of ten or more rooms above

the second story in this city, to ascertain if the provisions of the law regarding means of escape from such rooms in case of fire, and that means of extinguishing fires are provided and complied with.

I have to report that such inspection was made in the month of May, and that I found in nearly all cases that the law was complied with, and have so reported to the chief of state police in Boston.

I desire again, as in previous years, to call your attention to the necessity of revising to some extent the building ordinances of the city. The necessity for doing so becomes more apparent as the city continues to grow.

I shall merely outline a few of the more important changes that I would like to see introduced in the construction of our buildings.

Good, strong foundations and underpinnings; also strong brick piers or iron columns for the support of buildings should be insisted upon.

All brick chimney flues should have an eight-inch shell, or if built with a four-inch shell, should have a terra cotta or other lining. In this connection, I can say from data in my possession, that there are more fires in dwellings caused by defective chimney flues than from all other causes combined.

Where one or more families are to occupy tenements above the first story, that two flights of stairs, placed as far apart as possible, shall be provided to reach every story containing living or sleeping rooms, in order to make safe exits in case of fire. The necessity for this requirement has been forcibly brought out in the case of a recent fire in this city, where four persons lost their lives.

The matter has received the attention of the committee on buildings in the fire districts, to the extent that

the following vote was passed at a meeting of the committee held December 28, 1898.

VOTED — That all dwellings containing two or more tenements shall have not less than two inside stairways to reach every floor containing living or sleeping rooms, the stairways to be placed as far apart as practicable, or as may be directed by the inspector of buildings.

There are certain tenement houses that are considered fire-traps in this respect. Would it not be well to stop increasing the number of such?

Wooden buildings should be placed a sufficient distance apart on adjoining lots to allow facilities for putting out fires. Where wooden buildings are allowed nearer the line than the prescribed distance, the wall next the line should be built of brick or stone, with openings if any, in said wall to be provided with fire-proof shutters.

The erection of stables of any kind, nearer than a certain limited distance to dwellings, should be prohibited.

The question as to whether the limits of the first fire district in the center of the city might not be contracted at certain points, should, I think, engage the attention of the committee on buildings and of the city council the coming year.

There are points included in this district, that are now residential sections, and are likely to continue so for some years to come; I would suggest that all territory on the following named streets, beginning at a point 100 feet south from Union street, be excluded on Acushnet avenue, Fourth street, Fifth and Sixth streets; on Union street, west of Sixth street; on Pleasant street, north of Kempton street, and on Elm street, west of Pleasant street; the 100 feet limit holding good as provided for in the ordinances.

There are other questions and ideas relating to the work of the committee on buildings in the fire districts which are not here mentioned, but which will be brought before your honorable body in due time by the committee.

A large amount of work, such as answering inquiries or giving advice or counsel regarding building enterprises, cannot be tabulated, and is a constantly growing factor in the proceedings of this office.

I must gratefully thank the committee on buildings in the fire districts for the able and painstaking manner in which they have advised in all matters pertaining to the work of the office.

Respectfully submitted,

EDMUND O'KEEFE,

Inspector of Buildings.

In Board of Aldermen, April 27, 1905.

Received, ordered printed in the City Documents, and sent down for concurrence.

D. B. LEONARD, City Clerk.

CITY OF NEW BEDFORD,

IN COMMON COUNCIL,

OFFICERS.

CHAIRMAN,
JAMES E. MOORE.

SECRETARY, ERNEST A. WHEATON.

GENERAL SUPERINTENDENT, THOMAS W. COOK.

CONSULTING ENGINEER, W. F. WILLIAMS, CITY ENGINEER.

REPORT.

CITY OF NEW BEDFORD,
OFFICE OF PARK COMMISSIONERS,
MASONIC BUILDING.

December 31st, 1904.

To His Honor the Mayor and the City Council of the City of New Bedford, Mass.

Gentlemen: — As required by Chapter 154, Section 12, of the Acts of the Legislature of the Commonwealth of Massachusetts of the year 1882, entitled "An Act to Authorize Cities and Towns to Lay Out Public Parks Within Their Limits," approved April 18, 1882, the Board of Park Commissioners of the City of New Bedford has the honor to submit herewith a report of its doings, including detailed statements of all receipts, expenditures and liabilities for the year ending Nov. 30th, 1904.

The officers of the Board have remained unchanged during the past year, Mr. James E. Moore filling the position of chairman, and Mr. Ernest A. Wheaton secretary of the Board.

The past year has been one of some importance to the park system in many respects. Improvements of a substantial and beneficial nature have been undertaken some completed and some in course of construction which will require more time than one season affords or one annual appropriation provides for. The work in this department is steadily increasing, due in measure to the fact that our city is experiencing a substantial growth of population, making the demand for places of recreation, pleasure and out-door enjoyment in suitable and well conditioned resorts more of a necessity than ever before. Our parks are visited by thousands of our people whose circumstances in life preclude the possibility of a summer recreation by journey to the seashore or other summer resorts, where those can go who do not have to count the cost and can afford the time. The parks throughout the department have been kept up to and maintained in their usual good condition, and various improvements made upon them to the extent that appropriations would allow.

The most extensive changes and improvements have been made on Buttonwood Park. Owing to the undeveloped condition of the property when purchased by the City for Park purposes, it has required more outlay, and will continue to require more expenditure to make it as complete as the other parks, and the problem of developing it without neglecting the other parks has at times been a perplexing question. The park is popular and destined to be as desirable by the public as any park we have. That portion of the park now occupied by the base ball diamond should be made into a complete playground. There is ample room for more diamonds and other games. The demand from that large portion of our community who play the games, and the still larger portion who enjoy witnessing the same, are urgent in their appeals for more accommodation, and the Board would gladly accede to their wishes and provide all the necessary appliances and conditions for the permanent installment of a complete playfield if their resources would permit. The operation of creating and developing parks requires large means and outlays, and should be conducted upon plans carefully thought out, and intelli-

gently, continuously and perseveringly followed until they are perfected, after which the expense of their care only would be the demand made upon the taxpayers for their support. The consideration of the Board for new sites for playgrounds has engaged their attention during the year, and as in former reports they most emphatically urge the obtaining of either by lease or purchase suitable places in different parts of the City where for a small cost playgrounds could be established, and in this connection we quote from the annual message of President Roosevelt: "The people of this country should clearly understand that no amount of industrial prosperity can in any way atone for the sapping of the vitality of those who are usually spoken of as the working classes. Upon their well being, generation after generation, the well being of the country and race depends. The overcrowding of cities and the draining of country districts are unhealthy and even dangerous symptoms in our modern life. The slums exact a heavy total of death from those who dwell therein; and this is the case, not merely among the high buildings in New York and Chicago, but in the alley slums of Washington. For a happy-go-lucky lack of concern for the youth today, the community will have to pay a terrible penalty of financial burden and social degradation tomorrow. . . . If when the children grow up they are unhealthy in body and stunted or vicious in mind, then that race is decadent; and no heaping up of wealth, no splendor of momentary material prosperity, can avail in any degree as offsets. Public playgrounds are necessary means for the development of wholesome citizenship in modern cities. It is desirable that vacant places be reserved in sections of the city, which are destined to be built up solidly. All these needs should be met immediately."

That our parks are growing in favor, popularity and importance can not be doubted, as the crowds visiting

them are annually increasing in numbers, and the enthusiasm of the public who do visit them is always apparent in the pleasure and satisfaction which they manifest. Of course, improvements which are always made with a view to render more attractive, desirable and enjoyable the parks or portions of the parks when they are made, all of which requires attention and means maintenance, which calls for expense, therefore the honorable City Council is respectfully urged to attentively consider the subject in allowing the annual appropriations, and if in your wisdom the Commissioners' estimates of the necessary amount needed for park purposes must be lessened, why, reduce them in amounts asked for improvements, if any amount is asked for that purpose; but in any event, give the department money enough for its proper maintenance, for what use are the parks to the people without they can be maintained properly?

Mr. Warren H. Manning, landscape designer, of Boston, was consulted in regard to continuing the improvements on Buttonwood Park, and furnished a comprehensive design and working plan, which is hoped may some time in the near future be adopted and carried out.

WARREN H. MANNING.
LANDSCAPE DESIGNER,
1101-1104 TREMONT BUILDING,
BOSTON, MASS.

June 20, 1905.

Mr. Thomas W. Cook, Supt. Board of Park Commissioners, New Bedford, Mass.

DEAR SIR: — In accordance with your request, I have prepared a planting plan, which is submitted herewith, together with a general study.

Before undertaking the preparation of a planting plan for a portion of Buttonwood Park, I made a careful examination to determine upon a general plan for the future development of the section, for any planting plan must almost necessarily form a detail of a general plan. My conclusions are embodied in the accompanying sketch, concerning which I have the following suggestions to make in the order of their importance.

First, that the present canal be made a lagoon, dotted with islands, this being the least expensive method of correcting the present rather unsatisfactory appearance of the canal, which is neither distinctly formal or distinctly informal.

In the planting plan, plantations along shore were made with a view to their ultimately standing upon such islands as I have suggested.

At present the zoological collection of the park is quartered in and about this locality. As this section of the park seems to be better adapted to such a purpose than any other section, I have suggested in the sketch additional enclosures to provide for water fowl and such animals as are benefited by proximity to water, in order that they may have the advantage of the lagoon.

I have also suggested that a deer enclosure be made in a portion of the wild woods, with a path next to the fence, from which the animals may be seen.

Another suggestion was a basin next to the present street retaining wall separated into compartments, so that fish of various kinds could be kept and grown in the water running through from the large pond to the lagoon, the walks to be so arranged that the fish could be readily seen therefrom.

The accompanying planting plan provides, first, for a border plantation along Brownell avenue, to be made up of native Rhododendron, Dogwood and Redbud, with groups of Bee Balm, Yellow Day Lilies and low varieties of perennial Asters at irregular intervals along the edge of the planting, these last being hardy perennial herbs that will grow well with the shrubs and extend their season of flower.

A similar plantation along Court street is composed of Nine Bark, Panicled Hydrangea, White Weigela, Ibota Privet, Redbud and Dogwood, with groups of herbs similar to those referred to above.

At intervals along the paths on either side of the canal, and along the road to the east, I would have irregular masses of such shrubs as Arrow-wood, New Jersey Tea, Common Barberry, Wild Rose, Japanese Rose, Japanese Barberry, Panicled Hydrangea and Wooly-leaved Hydrangea, combined in such a way as to secure the best possible effects from foliage, general habit of growth and flower, and faced down on the outside with herbaceous plants, as in the case of the other plantations. These herbaceous plants will give you a succession of flowers from hardy plants that will require but little attention when once established, and they will grow in beauty from year to year.

A continuous plantation of Panicled Dogwood faced down on both sides with Wild Rose, and containing individual specimens of Shad Bush to give added variety to the sky line, would separate the road to the east from the path running parallel to it.

Directly on the edge of the stream to the south of the canal I would have groups of Silky Dogwood, Elderberry and Chokeberry, with an individual specimen or two of Golden Barked Willow to add a touch of color in winter.

The plan also provides for either the Wistaria or the Climbing Japanese Bitter Sweet on all buildings, one giving you flowers in the spring, and the other brilliant fruit in the autumn and winter. As it is nesessary that people should come close to nearly all parts of these houses, it is not practicable to provide much in the way of shrub planting about their base. It is for this reason that vines are suggested that will, if grown in rich soil and if properly trained, give much the effect that shrubs would give in screening blank walls.

I will submit to you an estimate of the cost of this planting. In addition to this plantation, which will be put in place at once, I would recommend at least a few plants made up of the following varieties, to be used on the islands and about the yards and enclosures, when you carry out the lagoon idea, if this meets with your approval: Red Osier Dogwood, Button Ball, Silky Dogwood, Virginia Creeper, Witch Hazel and Red Berried Elder, nearly all of which will grow rapidly, make a canopy of foliage that could be used on islands and in yards for the protection of such birds and smaller animals as you may wish here. They would grow and be of sufficient size to serve the above purpose when you have prepared the lagoon and the islands.

Of equal importance with this proposed new planting is the development of the existing growth. First, I would advise you to leave all the wilder parts of the woods in their present natural condition until you have determined upon the details of such planting as I have

suggested, or some other planting. From that part of the woods lying west of the present canal I would have at least one-half of the existing growth removed root and branch, using great care to select for removal the weaker specimens from the oldest stumps, and to saveseedling trees or vigorous sprouts from young stumps. Where there is a choice in the selection of varieties, I should prefer first the Beech, next the White Oak, then the Scarlet Oak, and then the Scarlet Maple. The Gray Birch should nearly everywhere be left for the present, as it serves as a nurse tree. Ultimately it will be removed, except where it stands on the edge of the open spaces where there are no other trees of importance. Your purpose here should be to develop between the canal and the road along the property line a fine growth of broad-spreading individual trees; but to do this it is best to make your thinning rather gradual than to cut out all that you think should be ultimately cut, because if the thinning is made too radical at first, it is likely to check the growth of the remaining trees. The Norway Spruce planted in the open ground of this area should be removed and used at some point in the border. perhaps at the upper end of the proposed extension of the lake, because they will ultimately spread and cover so much ground as to seriously restrict the available space for recreation purposes. It is altogether likely that this section of the grounds, together with the playground, will be very greatly crowded at times with visitors, and that provision should be made to have the intended open space unrestricted by plantations that will prevent its free use.

In all this study I have had regard for the plan that you have recently published that was prepared in 1895, but which included land which you have not, and do not seem likely to be able to acquire. The inability to acquire this land, the construction of Court street in a very

substantial manner directly across the center of the park, the establishment of a collection of animals, and the setting apart of a large rectangular plot as a playground, makes it impracticable to carry out this plan, although by making the lagoon you will have established its central feature, and you will still be able to have the circuit road of the plan much modified in detail; in fact, you have already established a portion of this circuit road. Under the circumstances, it would seem advisable that you arrange to have another general plan prepared, in which the existing outlines of the park, and the uses to which it is now being put, should be accepted as the basis for such a study.

Yours very truly,

WARREN H. MANNING.

PLANTING LIST

FOR

BUTTONWOOD PARK, NEW BEDFORD, MASS.

June 20, 1905.

- A. Rhododendron Maximum.
- B. Dogwood.
- C. Redbud.
- E. Wistaria or Japanese Bitter Sweet.
- F. Bee Balm, Yellow Day Lily and Perennial Asters.
- G. Panicled Dogwood in centre, faced down on both sides with Wild Rose, in the following proportions:—

One-third Panicled Dogwood.

Two-thirds Wild Rose.

- H. Shad Bush individual specimens to give more variety to sky line.
- Golden Barked Willow, to give a bit of color with its yellow foliage.
- J. Silky Dogwood at water's edge.
- K. Elderberry at water's edge.
- L. Chokeberry, to face planting to lawn.
- M. Arrow-wood in center, with New Jersey Tea facing planting to lawn, in the following proportions:—

One-third Arrow-wood.

Two-thirds New Jersey Tea.

- N. Common Barberry in center, with Wild Rose around the edge.
- Japanese Rose in center, with Japanese Barberry around the edge of bed.
- P. Panicled Hydrangea in the center, the edge faced to the lawn with the Wooly-leaved Hydrangea.
- Q. To be made up of the following proportions:-

One-fourth Nine Bark.

One-fourth Panicled Hydrangea.

One-fourth White Weigela.

One-fourth Ibota Privet.

BROOKLAWN PARK.

The popularity of this park remains undiminished, and has maintained its attractiveness, which is due to its natural beauty and the care and effort to keep it in a clean and well developed condition. This park has been from the time it was acquired by the City the most popular resort for picnics, and schools, societies and parties, not only from our own City, but from the neighboring towns, have resorted there for their summer gatherings and pleasure outings, and certainly it is a most desirable place for such purposes. The band concerts Sunday afternoons were attended by many thousand people, who by their orderly deportment and apparent satisfaction seemed to affirm the wisdom of the City's affording them the opportunity of enjoying such salutary advantages. The street railway passing the park makes it easy of access.

The regular spring work of cleaning up the grounds was commenced April 2, and the preparatory work of placing the flower beds and borders in condition for the plants was satisfactorily done. The drives and walks received the necessary repairs occasioned by the damage of a severe winter, and the park was put in condition to receive the summer visitors.

COMMON.

The Common or public garden has been carefully and successfully maintained, and is the pride of our citizens. Its well-kept lawns and beautiful flower-beds have proved a great attraction, and a great many people have greatly enjoyed its lovely appearance. A new tool-house has been built in architectural harmony with its

surroundings, and is a great convenience and saving of time and labor by the men having all the necessary equipment close at hand, instead of having them stored at the greenhouse lot, some distance away. The walks around the monument have been laid anew in granolithic, and adds much to the appearance as well as the comfort of those who like to stroll around the monument and enjoy the monument and its surroundings. connection with the Common, the lot on County street purchased for the purpose of raising the stock required for the flower beds has proved a wise and economical measure. A propagating house and a large number of cold frames were built, and all the flowers needed for the Common and all the other parks and squares of the City raised, which had heretofore been bought each season in the open market. There are some much needed repairs and improvements which the Board would like to make when it is possible to do so, but they are aware that the finances will not allow of too great expenditures in any single year, and so try to do a portion annually and in time accomplish what they consider essential. At the request of some of the school authorities, flowers have been furnished the schoolhouse grounds, and the children exercised in planting and caring for them, much to their enjoyment and education in what is a beautiful work, impressing upon their young mirds the love of nature and its wonderful possibilities.

HAZELWOOD PARK.

This beautiful park was the resort during the summer season of a great many picnic parties, and hardly a pleasant afternoon was passed without some society or a number of parties could be seen under the trees, taking their lunch and enjoying the beautiful views of the river and water front. An effort was made to provide a skating place for the children in the neighborhood, and in the early winter six hundred thousand gallons of water was provided by the Water Department from the hydrants on the middle road, but the ground would not hold it and the attempt was given up, much to the disappointment of the little ones. The north roadway leading onto West French avenue was widened so as to allow carriages to pass one another, and about half an acre of land in the southwest corner of the park was cleared of the underbrush, graded and made available for use. The wharf on West French avenue received the repairs it has so long needed. The walls were taken down and rebuilt, the top taken off to the depth of three feet, then a thick layer of seaweed, on top of which a filling of dressing and soil, then it was sowed down, and a very nice grass plot supplants what was before very unsightly. Nothing else of importance was done, aside from keeping the grass cut, roads in good condition and the flowers and shrubs in order.

GROVE PARK.

The judgment of the Commissioners in making this park a playground for the children was easily confirmed by the attendance of the large numbers who daily resorted there for amusement. Being situated in a part of the City where open spaces for out-door resort are not numerous, it at once became popular with the little children, whose only place for play had been the streets. The installing upon the park of athletic apparatus, consisting of large and small frames, with high and low swings, teeter ladders, jump stands and merry-go-round, also sand boxes for the small children, was received with the greatest satisfaction, and proved that it was a wise

expenditure and that a further adoption of playgrounds throughout the City in similar locations would prove beneficial and an advantageous improvement and addition to the park system. The apparatus is similar to that used in indoor gymnasia, and so far as it goes is firstclass. The constant use during the summer demonstrated that it was both popular and practical, as it was used to its fullest capacity, and must have been a great relief to hundreds of parents whose little ones were during the summer vacations cared for and amused in a safe. pleasant and healthful way by the wise provisions of the city authorities. It is to be hoped that the policy of establishing playgrounds in various sections of the City, thus so satisfactorily commenced at this park. Children's playgrounds are an absolute need in all sections of the City. The public streets should not be the children's playground. It would in no way conflict with the larger parks, as the purposes are altogether different and their value.

TRIANGLE PARK.

This little piece of ground has received the care of the florist, and the display of flowers and shrubs has been appreciated by the people residing in that location. All that it requires is to keep the grass properly cut and the flower-beds full of seasonable flowering plants, which has been done. More such places located in different parts of our City would add greatly to its civic beauty and attractiveness.

Respectfully submitted,

JAMES E. MOORE, SAMUEL P. RICHMOND, OBED C. NYE, ERNEST A. WHEATON, CHARLES T. SMITH.

P. A. MACOMBER,

Clerk of the Board.

It has been but comparatively few years since the sentiment toward our burial places has changed. The old burial ground of the past has, through the influence of a better educational system, been renovated, the weeds are kept under control, and the head stones once more stand erect. The park-like effect of the newer sections of the cemeteries is very restful, the Board having persistently followed the lawn plan system in all its extended territory. The single grave sections and the Public Grounds have been embellished with ornamental vases and shrubs and are as well cared for as the most expensive lot. Every dollar received is used for maintenance and care, and cemeteries of this city compare favorably with any in this section of the country, as to their neat and attractive appearance.

In Rural Cemetery, the expense has been confined mainly to the maintenance and care of these grounds, the avenues have been much improved by a top covering of cinders and gravel. The park sections and borders have been neatly trimmed, and embellished with many additional shrubs and floral designs. The old grove of scrub oak, adjacent to the Manoah, has been cut down, and that section will be prepared for sale during the coming season. No new sections have been added during the year, a sufficient number of lots remaining unsold to supply the present demand. The additional drain and catch basins, recommended by the Superintendent in his report, have been completed, and the importance of this improvement has been apparent during the season of heavy rains.

The Cemetery Board is desirous of completing the more extraordinary improvements to this cemetery during the season of 1905. The new entrance to these grounds through the land recently purchased for this purpose, should be constructed in accordance with the plans already prepared by the City Engineer, the sexton's cottage should be removed to the site purchased for the same, and the

new street fence of modern design substituted for the present picket enclosure. This will require increased expenditure and we trust the City Council will carefully consider these required improvements in providing for this department.

Strenuous appeal has continuously been made, and reference to the previous reports will show that this Board has strongly urged the City Government to make necessary provision for the purchase of a lot of land at the corner of Dartmouth and Oak streets, adjoining Rural Cemetery, for the purpose of constructing a new, safe and modern entrance to these grounds. At a regular meeting of the City Council, Sept. 24, 1903, a special appropriation was asked for this purpose, but was defeated. Cemetery Board, however, realizing the necessity of procuring this property for the above purpose, and feeling that further intelligence respecting the cemetery's need for the same might be conveyed to the City Council, made another appeal to them on May 12, 1904, asking for a committee of conference that the premises might be viewed and the actual need of its purchase observed. This committee was not appointed, however, until May 16, 1904, at which meeting the Council appointed Messrs. Lee, Watson and Milliken, and the Mayor appointed Aldermen Jenney and Lawton. This committee met in conference with the Cemetery Board, on the ground at Rural Cemetery; the advisability of the immediate purchase of the land above mentioned was at once apparent to the committee, as was also sufficient adjoining property upon which the sexton's cottage should be moved. At the next regular meeting of the City Council, May 26, 1904, this committee recommended that the several lots of land be purchased for the purpose as designated by the Cemetery Board, and an order was thereby introduced asking that a special appropriation of \$4,250.00 be made for the same. The order was again defeated.

The Cemetery Board, knowing this to be the only opportunity to purchase land for a proper entrance to this large cemetery, determined to make one more effort to purchase the lots. Sufficient money had accumulated from "Sales of Lots" in the cemeteries to meet this purchase, but the Board had wished that the funds might be raised by the Council from other sources, and the accumulation from "Sales of Lots" be used for the immediate development of the land. It was plainly evident that if the land was purchased, the money from this fund must be used, in consequence of which the following order was introduced at the meeting of the City Council, June 23, 1904:

CITY OF NEW BEDFORD, IN COMMON COUNCIL, June 23, 1904.

ORDERED — That the sum of four thousand two hundred and fifty dollars (\$4,250.00), be and the same is hereby appropriated from Unappropriated Funds for the purpose of purchasing three certain parcels of land for the improvement of Rural Cemetery, as follows:

- 1. One lot, containing 70.7 rods, more or less, situated at the northwest corner of Oak and Dartmouth streets, belonging to H. T. Borden & Co.
- 2. One lot, containing 18.25 rods, more or less, situated on the north side of Oak Street Court, belonging to Lizzie T. Borden.
- 3. One lot, containing 11.16 rods, more or less, situated on the south side of Oak Street court, belonging to Emma F. Black.

And it is further ordered, That the City Auditor be and hereby is directed to transfer the sum of four thousand, two hundred and fifty (\$4,250.00) dollars

from the account "Cemeteries, Sale of Lots" to the account of "Unappropriated Funds," said transfer being for the following purpose: To reimburse the City for the cost of land purchased under this order.

Adopted in concurrence.

Common Council—Yeas, 19; nays, 2.

Board of Aldermen—Yeas, 5; nays, 1.

Presented to and approved by the Mayor June 24,1904.

This reduced the "Sale of Lots" account to the extent that the land will have to remain as it is until sufficient accumulation by further sale of lots will admit of its improvement or special provision is made for the same by action of the Council.

At Oak Grove Cemetery.—General activity has been shown in these grounds throughout the season. Not only has the usual care and maintenance been preserved, but special work has been pushed in developing the remaining portion of the extreme north and west sections of this cemetery. This will complete the preparation for sale of all the available land suitable for burial purposes, thus emphasizing the importance of providing for the future need of the north and west sections of the City by the purchase of the tract of land adjacent to Pine Grove Cemetery, reference to which is more particularly made in the following detail of this report. Under the direction of the sexton, Mr. Hurlbert E. Thomas, many attractive features in the artistic arrangement of the palms and floral designs on the borders and lawns have been made, the artificial pond with its aquatic growth enlivened with myriads of gold fish, surrounded by many varieties of foliage plants, has been a striking exhibition in the tasteful and harmonious embellishment of the park entrance to these grounds.

In the older portion of this cemetery, special attention was given this year to the straightening and in some cases re-setting many of the old head stones. The work has received much public approval. A large portion of concrete walk, which had been broken by the frost and washed by heavy rains, has been re-laid, and many lots which have previously shown the appearance of neglect are now being cared for by renewed interest of their proprietors.

A great deal of thought has been given of late years to the extension and improvement of Pine Grove Cemetery. Its general condition has often been commented upon in the annual reports of this Board. The possibility of access direct to the main avenues leading from the City, by the construction of a new entrance, has frequently been discussed. The steady growth of the City and the increasing demand for lots in these grounds have prompted the Board to make extensive improvements. During the summer twenty employes were assigned to this cemetery; land for two new sections was broken and cleared of all obstructions, graded and seeded, and divided into lots of desirable dimensions, some of which have already been purchased. New avenues have been constructed, giving access to all lots in these sections. Many of the lot owners have placed their lots in perpetual care, and a large number avail themselves of the opportunity to place their lots under the annual care of the City.

Pine Grove Cemetery being situated in a location quite remote from the City's water supply, it was therefore necessary, in order to provide for the proper care of lots under the charge of this department, the protection of the numerous flower beds and shrubs, the borders and lawns, to provide a local supply of water of sufficient capacity for the present need, and also future

requirement, as it becomes necessary to further extend these grounds. The problem was met without hesitation on the part of the Board. Contracts were soon placed for the construction of a water plant located at the north of the present cleared section, and before the close of the season a complete water system was installed, consisting of a thirty-foot well, yielding an inexhaustible supply of water. Above this was erected a twenty-seven foot tower, supporting a tank with a capacity of five thousand five hundred gallons. From this, distributing pipes will be laid to hydrants in different locations in the cemetery, to which hose can be attached. The water is raised from the well to the tank by an Ericson engine, placed in connection with the plant. The tower and tank have been neatly painted, and are not objectionable features in the cemetery. The cost of this plant will not exceed \$1,500.00, and has been paid for from the receipts of this department.

One of the attractive features of this cemetery is the new shelter house which has been built this year. It is of rustic construction and unique in design. The protection the little building has furnished in inclement weather and sudden storms, and from the hot rays of the summer's sun, has been frequently commented upon by the many visitors to this cemetery. Pine Grove Cemetery, however, has but a limited area, consisting of 10 acres and 89.61 square rods, the larger portion of which has already been developed and improved. Provision should at once be made by the City to purchase the tract of land on the north and west of this ground. now owned by Rhoda B. and Allen Russell, Jr., containing 71 acres and 10.86 square rods. This land is nearly all cleared, and is of such character as to make a valuable acquisition for burial purposes, as well as providing extended area for cemetery use in this section of the City.

Griffin Street Cemetery.—Early in the spring of 1904 the Water Department extended a service and hydrant into these grounds, from which the flower beds and shrubs have been supplied with water during the summer. The water has been supplied in previous years from the faucets of the neighboring residences. No further special work on the old burying ground has been required during the year. The ordinary and regular work necessary to the proper care of this old burial ground has been faithfully performed by the custodian, Mr. Nelson L. Pike, Sexton of Rural Cemetery.

Greenhouses. — The products of these houses contribute almost entirely to the ornamenting and embellishment of the several cemeteries, under the care and supervision of Mr. Edmund Johnson. Over sixty thousand bedding plants have been raised and transplanted to the several beds, borders, vases and trust lots in the cemeteries. No investment is required for stock, as cuttings are taken from our own plants in the fall, and but little is spent for new seed each year. "What would our cemeteries be without flowers?" If there is one place more than another where it is appropriate for flowers to be cultivated, it is our cemeteries. Many potted plants, such as Dracænas, Palms, Century Plants, Oleanders, etc., are used to ornament the lawns and park sections of the grounds, being arranged to give a pleasing effect. There are also many other places, at the tombs and around the ponds, where plants may be advantageously placed. It has always been found to be a very satisfactory feature at funerals and burials to use plants and flowers to take away the harshness of the grave.

It has been necessary to extend the fern house for the accommodation of our potted and standard plants during the winter, and the greenhouse and plant department are now important features in our cemetery work. There is a vast amount of work to be done by the gardener which is not strictly confined to the greenhouse. The trees and shrubs are under his care, and he is to direct all changes necessary in that special department.

This department desires to acknowledge the gift to the cemeteries from Mr. Charles W. Gellette, 299 Chancery street, of two large Century Plants of a special variety, which have supplied an attractive ornamentation on the lawn at the entrance to Oak Grove Cemetery.

The Cemetery Board beg to acknowledge the cordial co-operation of the City Engineer, Mr. Wm. F. Williams, and his assistants for material supplied incumbent to his office, on surveys and grades, plans for new sections and avenues, including a special provision of duplicate plans of those sections showing unsold lots, neatly arranged in folio, to be used at the cemeteries by those desiring to purchase lots. The Board also appreciate the prompt and faithful attention given to the record of interments by his assistants.

PLEA FOR PERPETUAL CARE.

It is to be noted in all recently published catalogs of cemeteries, a large space is devoted to the explanation of this system now so acceptable, and also appreciated in a marvelous increase in the number of lots placed within its lists. These lists, together with the numerous "Perpetual Care" signs to be seen upon lots in the cemeteries, indicate its rapid growth and favorable consideration.

The perpetual care of a lot may be said to comprise the care of the sod, plants, more or less elaborately arranged, and the washing and pointing, and possibly the renewal of the memorial stones. In the older portions of the cemeteries, which are not laid out on the lawn plan system, the fence and curb will require some care untilsuch time as their owner will consent to remove them. The really important items which should be provided for whenever possible are the care of the sod and the washing and pointing of the memorial stones.

When lots are sold with perpetual care, nothing more than the care and repair of the sod is usually provided for, as no equitable sum can be fixed for the care of memorial stones until their design, material and number are decided on. An additional deposit can be made later for their care or for plants.

A burial ground unprotected and neglected presents a cheerless and sad spectacle. It would seem that the dead who lie in such a place had been strangely forgotten by the living. Hence no cemetery or burial ground is complete or satisfactory which does not show, not only evidences of care and respect paid by individuals and families to the memory of their own dead, but evidences also of that respect which the community of the living should ever bear toward the community of the dead. The endowment required for the perpetual care of a lot is that sum, the interest of which at the assumed rate is sufficient to meet the average annual expenditure necessary to keep the sod in order, wash and point the memorial stones, when necessary, and to provide such plants as may have been agreed upon. The Board advocates not less than one hundred and fifty dollars be deposited; the ordinance, however, provides that any sum can be deposited to perpetual care, but it is the province of the Board to determine what amount, the interest of which will be sufficient to annually care for the lot. The ordinances provide also that all moneys for perpetual care shall be deposited in the Savings Banks or Institutions for Savings in this Commonwealth, and the interest only is available for the care of lots.

The amount of money deposited to the perpetual care of lots, Dec. 7, 1903, was \$81,790.84; to this has been added during the year \$6,458.00, making a total now deposited \$88,248.84, representing 877 lots, 56 having been added this year.

If lot owners desire that their purposes respecting their lots shall be absolutely fulfilled, it can best be done by each one being his own executor, and placing with the City Treasurer the amount of his intended bequest, before his decease. Lots and their improvements will be examined and an estimate of the sum required to provide for special perpetual care will be furnished upon request.

The attention of lot owners is also invited to another important subject — that of assuring the undisturbed interment of themselves and families in the lots they have selected with so much care and thoughtful regard for the future. That these lots should ever be sold. and their bodies removed and those of their families, through the poverty or cupidity of those who might inherit them, could have never been contemplated by the owners at the time of purchase. Even though parents may feel that their graves will not be sold, and their remains disturbed by their own children, they cannot feel as secure as to remoter heirs. Lot owners may, with but little trouble, avert the possibility of such consequences, by authorizing the City, through this department, to take and hold (but not with the power to convey) any plot which may be conveyed by "Assignment in Trust," and to restrict interments therein to such persons as may be designated in the assignment. This provision is designed to meet the views of many lot owners who desire no interments made in their lots, except such as they name, and that the improvements which they have placed on their lots and the interments made in them shall remain undisturbed.

In closing, it is our pleasant duty to give expression to the appreciation of the efficient management and development of the cemeteries by the Superintendent, Mr. Charles F. Cornell, and to the Sexton and employes, who have satisfactorily and acceptably performed their duties, under his direction.

We are grateful to the many kind expressions of commendation from His Honor, Mayor Ashley, the City Council and the citizens generally.

Respectfully submitted,

JOHN G. NICHOLSON, Chairman. W. M. HIGHAM. CHARLES H. VINAL, Secretary.

Superintendent's Report.

To the Cemetery Board, City of New Bedford:

GENTLEMEN:—I herewith submit my annual report, with a summary of the work performed, together with a few suggestions pertinent to this department.

The past season has been a very busy one, requiring the employment of a slightly increased force of men, and for a longer time. In common with the past three or four seasons, the growth of grass has been phenomenal. The rainy weather prevailing during so much of the summer induced such a crop of grass that continual cutting was necessary to keep it within proper bounds.

Several of the old avenues have practically been re-constructed and are now in condition for several years' service. There are some, however, which should be re-graded and filled with proper material for a road-bed.

A question of much importance that will soon confront the Board is that of supplying suitable burial places in the public lot, to meet the steadily increasing demand. The laying out of such a range in any of the territory remaining at disposal is something of a problem that it may not diminish the value of contiguous lands.

The new iron fence along the Dartmouth street frontage of Rural Cemetery should be constructed during the coming season, as the present wooden pickets are in need of repair. Preparation, as far as possible, should be made for the opening of the new entrance to this cemetery, as the old one is quite inadequate for the present needs of these grounds.

No extension of the water supply has been made in the principal cemetery of the City for several years. I particularly wish to emphasize the need of sufficient extension to satisfy the public demand. Many visitors are now required to carry water long distances to supply their lots. Long lengths of hose are often supplied to accommodate visitors, at their request. Provision for an extension of not less than 1,500 feet in both Rural and Oak Grove Cemeteries should be considered at once.

The increasing interest of the citizens of New Bedford in the development of Pine Grove Cemetery, the demand for lots, the rapid spread of the population in the northern section of the City, have raised the important inquiry of "What are the possibilities of extending these grounds by purchase of the surrounding territory and thus providing for future demands?" While the Board has already given this matter much consideration, I venture to recommend that the matter be early presented to the City Council, that the adjacent land, now accessible, be purchased for the extension of this cemetery, before it is acquired by others for building sites.

Respectfully submitted,

CHARLES F. CORNELL,
Superintendent.

Received, ordered printed in the City Documents, and sent down for concurrence.

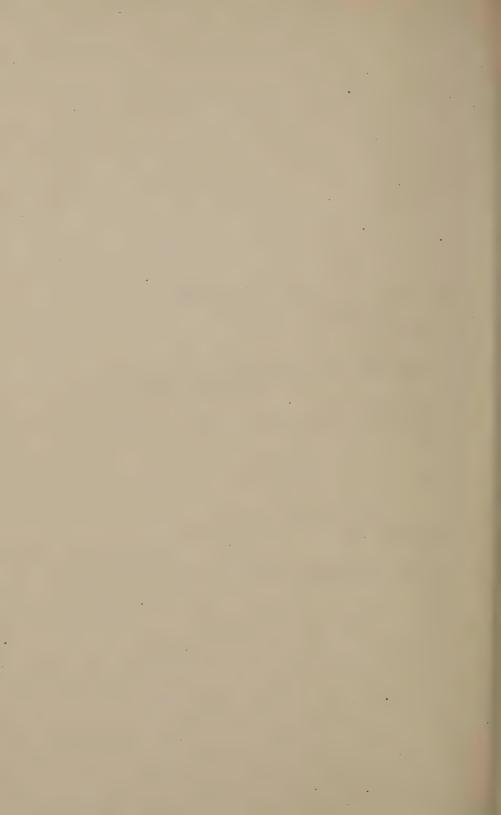

WM. A. COOK, Assistant City Clerk.

In Common Council, Jan. 26, 1905.

Concurred.

W. H. B. REMINGTON, Clerk.

ANNUAL REPORT

OF THE

INSPECTOR OF MILK, PROVISIONS AND ANIMALS

OF THE

CITY OF NEW BEDFORD

For the Year Ending December 31, 1904.

New Bedford, Mass.
The A.E.Coffin Press, City Printers.
1905.

CITY OF NEW BEDFORD, IN BOARD OF ALDERMEN, March 9, 1905.

Received, ordered printed in the City Documents, and sent down for concurrence.

WM. S. COOK, Ass't City Clerk.

In Common Council,
March 23, 1905.

Concurred.

W. H. B. REMINGTON, Clerk.

REPORT.

New Bedford, Mass., Dec. 31, 1904.

To His Honor the Mayor, the Board of Aldermen, and the City Council of the City of New Bedford:

Gentlemen — The report of this office is herewith respectfully submitted.

The main question occupying this office is the procuring for the citizens of New Bedford pure, unadulterated, wholesome, standard quality milk, meats and provisions.

"There is no person who realizes the value of pure milk, both as regards its food value and as a protection against disease, more than the inspector, and I have made it a duty to procure this end by whatever methods, provided they be honest and legitimate, that, in my own experience and that of others who know the value of what they suggest, seem, under the circumstances, the most promising, and the result is that New Bedford's milk supply is second to none in this state.

"The inspector's office, at No. 137 Pleasant street, is open during business hours every day, and is visited by the public in all matters relating to the questions of milk, provisions and animals, such as bringing samples of milk and provisions for inspection and investigation, and

making inquiries and complaints on various matters; all such complaints have been cheerfully and thoroughly investigated to the perfect satisfaction of all parties interested.

"No person need be in doubt about the purity and quality of their milk supply, when a visit to this office will give all needed information and assistance. I make an annual inspection of all the cattle, sheep and swine owned within the city limits, and ascertain their condition as to the existence of contagious disease, and the general condition and cleanliness of the cattle.

"Also, I minutely examine the barns or other enclosures in which cattle are kept, with reference to their situation, cleanliness, light, ventilation and water supply, all of which I make out in a detailed report with names, etc., etc., to the Cattle Bureau of the State Board of Agriculture, which is embodied in their report to the legislature. This year I have condemned two places where cattle were being kept, and now the cattle and their abodes are in far better condition than ever before.

"I have caused to be killed during the year two glandered horses and six tuberculous cows, and proved my diagnosis by post mortem examinations. My duty is also to seize, quarantine and kill all animals suffering with contagious and infectious diseases, after a thorough and careful examination, and it has been my pleasure to strictly and impartially perform this duty to the best of my ability and the full extent of my authority, thus giving to the inhabitants of New Bedford as little danger as is possible of contracting these fatal diseases, which are carried to the human family by contagion and infection.

The number of diseased animals destroyed during the year is the smallest of any year during the past 17 years of my administration of the duties of this office, and there is no doubt that there are fewer cases of these diseases existing in this section today than ever before, owing to

the better care and improved surroundings of our animals, which has been insisted upon by the inspectors of animals.

"I have issued 277 licenses for the sale of milk at 50 cents each, which has been paid into the city treasury.

"During the year I have found but one outbreak of hog cholera. This was in a herd of 20 swine, old and young, and they all died, and were buried deep in quick-lime, their houses burned, with all litter, and everything connected with them, and every precaution as to disinfection, etc., was taken; and in this connection I want to return my sincere thanks to Dr. H. B. Hamilton, who furnished me the information regarding this outbreak. He has also given me material aid, in locating cases of glanders in horses, many times before, all of which is doubly appreciated by me, as he is the only veterinary surgeon who, in 17 years, has ever given me the first iota of information or help of any kind, which in many cases without help, is very difficult to obtain.

"The slaughter of cattle for food purposes, in my mind, is a subject of the most vital importance, and I shall now state the whole modus operandi, without fear or favor. In the first place, the law in regard to the inspection of cattle at the time of slaughter, is left to the governments of cities and towns to decide by vote whether said inspection shall be made or not.

"The town of Dartmouth has voted not to have such inspection. There are two reasons for this; viz: it saves the town the expense of the inspector, and allows the farmers to sell their worn out cows to butchers, who have swarmed to the town of Dartmouth to carry on their business of slaughtering. These butchers scour the country from Cape Cod to Westport Point and from Barneys Joy to Middleboro, buying up cows that have passed their usefulness as dairy cows. Many of them are tuberculous. Now this is the result: All of these tuberculous carcasses are dressed and brought into the city of New Bedford

and sold for food purposes and eaten as food by our inhabitants. I have notified his honor the mayor of the existing conditions, who will, no doubt, at once relieve said conditions.

"The question of adulterating milk is well known to be too easy to detect, and that part of an inspector's work has got to be very limited, but the main, and by far the most important question is clean milk, and how to deliver it in a clean and wholesome, pure condition. I have inserted my paper upon the practical handling of milk, and by the direction of His Honor Mayor Ashley I shall make it a guide and standard, by which New Bedford's milk supply shall be furnished.

"There is nothing arbitrary about it, nothing but what everyone can understand, and, if followed out, there will be very little to complain of and much to commend.

"I shall visit all premises of those who help to furnish New Bedford's milk supply, inspect all cattle, their barns, milk utensils, etc., and cheerfully give all needed advice and directions. This I have a perfect right to do as agent of the cattle bureau of the state board of agriculture, and because it is my duty to protect the community I represent as inspector.

"In the preservation of milk, which should be the chief aim of the milkman and the housewife, it should be remembered that, with the exception of creaming, which is due to the action of gravity, all changes in milk are brought about by the action of bacteria. Milk containing no bacteria undergoes little or no change, and remains indefinitely sweet. When secreted in the udder of a healthy cow, it is doubtless in this condition, but to transfer it to a bacteria-proof vessel is no easy matter, and despite all precautions possible in every day practice, many bacteria will gain access to the milk while being drawn and in the subsequent handling of it. The best that can be done is to keep out as many as possible. Now,

in order that the milk may be as free from germs as possible, certain conditions should be observed, viz:

"The cattle should be free from disease. Hence, every herd of cows producing milk for human consumption should be inspected by a veterinarian, employing the tuberculin test to such herds as require it, and ordering the removal of all cows that react to the test, and all that have diseased udders.

"The cows should be kept as free from dust and dirt as possible, and if the hair on the flank and udder were moistened before the milking began, it would prevent particles from falling off into the milker's pail.

"The air of the stables should be kept pure and free from dust. The milkers' hands and clothes should be kept perfectly clean. The first few spoonfuls of milk from each teat should be rejected. All utensils and cans should be cleansed in the following manner: First, wash out with hot water; then with hot water and sal soda, using a brush, so as to clean thoroughly all seams and other parts of the cans; then rinse in boiling water and hang up to drain in a clean, pure atmosphere. The cooling and aerating of the milk and transfering of it to the cans should be done in an atmosphere which is as pure as possible. Having taken every precaution to keep the bacteria out of the milk, the next precautions are to prevent the multiplication of such as have invariably entered. To accomplish this, low temperature seems the most practical for the dealer. Frozen milk keeps indefinitely, as no bacteria can grow in it; but at a temperature of from 35 to 45 degrees, it keeps long enough for most purposes; this temperature can be readily obtained by the use of ice; it is important that the milk be cooled after being drawn as soon as it is possible. After cooling the cans should be kept at as low temperature as is practical until delivered to the consumer.

"Consumers cannot be too careful about their milk supply, especially if it is intended for infants and invalids; insist upon having a good quality, remembering that two things should be taken into consideration: First, the manner in which the cows and milk are treated; and second, the solid matter the latter contains. milkmen whose wagons, teams and drivers have not a neat and tidy appearance, for no milkman who handles his milk in a cleanly manner will send out a dirty wagon or driver. If possible, visit the dairy furnishing you milk. Nothing would do more to stimulate neatness among dairymen than the frequent visits of its patrons. Ascertain what the composition of the milk furnished is, remembering that its richness cannot always be judged by the thickness of the cream which forms upon its surface. containing too high a percentage of fat is not as suitable food for children as an average milk, since the excess of fats interfere with the proper digestion of the rest of the ingredients. Furnish a thoroughly cleansed and sterilized dish for receiving the milk, and then if it sours within 15 or 18 hours, when kept free from dust and at a moderate temperature (60 to 70 degrees Fahr.), or if it becomes ropy or bitter, or sours with an offensive odor, or the formation of many gas bubbles, call the milkman's attention to the matter. All such changes are due to too many bacteria being permitted to enter the milk, owing to the careless or unclean handling of it."

Respectfully submitted,

DR. D. C. ASHLEY,

Inspector.

LIST OF JURORS.

CITY OF NEW BEDFORD.

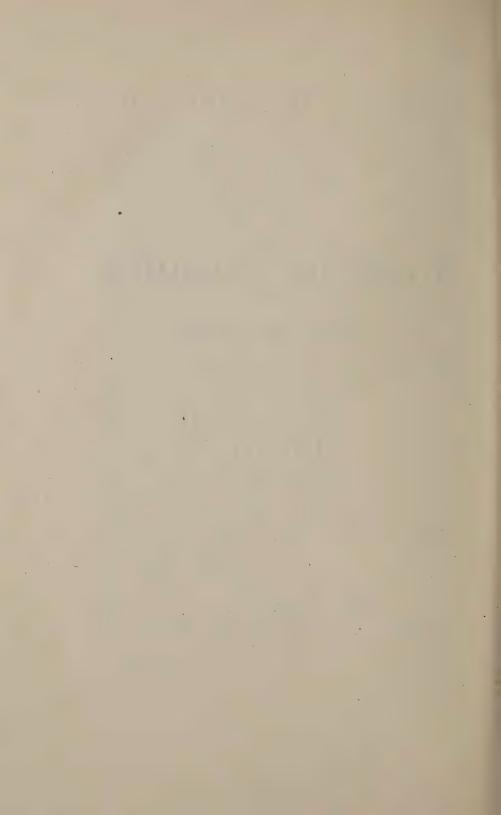

1905.

CLERK'S OFFICE, Feb. 23, 1905.

This certifies the following to be a correct list of persons prepared as provided by law to serve as jurors for the year 1905.

Attest:

DANIEL B. LEONARD, City Clerk.

CITY OF NEW BEDFORD, MASSACHUSETTS.

REPORT ON EXAMINATION OF THE ACCOUNTS OF THE CITY

FOR THE SEVEN FISCAL YEARS ENDING DECEMBER 7, 1903.

EASTERN AUDIT COMPANY, BOSTON, MASS.

NEW BEDFORD: THE A. E. COFFIN PRESS, CITY PRINTERS 1905,

Report of Examination.

To the Honorable Charles S. Ashley, Mayor of the City of New Bedford, Massachusetts:

SIR:— In accordance with instructions received from a Joint Special Committee of the City Council, we have made an examination of the books, accounts and vouchers of the City of New Bedford for the seven fiscal years ending Dec. 7, 1903, for the purpose of "determining the accuracy of the accounts, and whether any money has been unlawfully expended."

We submit, herewith, a memorandum setting forth the scope of our examination, explanations of the statements, and our comments on the condition and arrangement of the accounts as they have been kept by the City.

We also submit balance sheets and statements of receipts and disbursements for the seven fiscal years ending Dec. 7, 1903, together with statements of various other matters covered by our examination, all of which are listed on pages 17 and 18 of this report.

A change was made in the fiscal year of the City in 1897, and the accounts of the year ending Dec. 6, 1897, include the transactions of only between ten and eleven months.

In order to verify the cash in the hands of the Treasurer as at Dec. 7, 1903, we made an examination of the receipts and disbursements from that date to Dec. 20,

1904. The funds in the hands of the Treasurer at that date were found to be the amount that should have been in his possession in accordance with the Auditor's books. Various errors were, however, developed by our examination, which resulted in increasing by \$744.94 the amount which was shown by the books.

These discrepancies appear to result entirely from unintentional clerical errors, and the details are set forth on Schedule F-I. The Treasurer has taken up on his books, as of January, 1905, entries making the proper corrections.

As such matters are not only outside of the province of accounts, but also beyond the scope of our instructions, we have not attempted to pass in any way on the wisdom or desirability of any of the disbursements, but have confined ourselves to seeing that they were all properly authorized by the City Council.

We hereby certify:-

- 1. That subject to the above qualifications, all funds shown to have been received by the Treasurer have been accounted for; and that we have found all his disbursements supported by proper vouchers, authorized by the proper city officials—except an amount of \$531.06 in the year 1897, for which vouchers were not on file. We have, however, satisfied ourselves that these disbursements were properly made.
- 2. That the balance of cash on Dec. 7, 1903, as shown by the books of the Auditor, amounting to \$126,880.66, was in the possession of the Treasurer as of that date; but, as stated in the foregoing, an additional sum of \$744.94 should have been shown by the books, and consequently should have been on hand at that date. The Treasurer also had on hand additional funds sufficient to

meet the amount of all approved vouchers credited to him on the books of the Auditor, but not actually paid at that date.

3. That all funds shown to have been received by the Commissioners of the Sinking Funds have been accounted for; and that the securities and cash on Dec. 7, 1903, as shown by their books, amounting to \$1,066,137.37, were on hand as of that date.

Very respectfully,

EASTERN AUDIT COMPANY. By C. R. Rockwell, Manager.

SCOPE OF EXAMINATION.

Our examination of the accounts has covered not only the finding of proper vouchers for the disbursements, but also the verification—as far as possible—of the entry on the books of the Treasurer of all funds which should have been received by him.

During the seven years covered by our examination the Treasurer has disbursed about twenty millions of dollars. With the exception of a few small amounts in the year 1897, we have found youchers for the whole of this sum.

Each voucher has been examined not only for the receipt of the payee, but also to see that it had been approved for payment by the proper authority.

With the exception of vouchers covering payment of wages to day laborers (from whom no receipts were taken), substantially all vouchers were properly receipted.

Certified copies of all orders passed by the City Council, making general or special appropriations, have been examined for the purpose of ascertaining the amount of expense authorized; and other records were examined to determine who were the proper officials to approve the vouchers for the various disbursements. With a few exceptions, we have found all vouchers approved by the proper parties, and we have seen that the approvals were based on the authority of the City Council. In cases in which the approvals were either irregular or missing, the disbursements appear to be proper and ordinary expenses.

The vouchers for the disbursements of the Water Board are kept by that department, and the payments appear in the books of the Auditor in totals only. We have found vouchers properly receipted and approved, covering all disbursements of the Water Department shown on the Auditor's books.

We have examined the vouchers, covering disbursements from the income of trust funds, made by the School Committee and by the Trustees of the Free Public Library. The vouchers and schedules submitted by the School Committee are in order, but the form of schedule prescribed by the ordinances has not been used by the Library Trustees.

We have verified the amounts shown by the Treasurer as having been received from taxes, by the examination of the tax ledgers; and have shown on the balance sheet of each year the amount of taxes remaining uncollected.

The Treasurer's receipts from licenses, and from other collections of various kinds, have been verified by comparison with the records of the License Commission, Street Department, Cemetery Department, Department of Wharves, Poor Department, School Department, City Clerk, District Court, and other sources of information.

The receipts of the Treasurer from the Water Department have been checked with the records of that department, and we have seen that the Treasurer has charged himself with all collections shown by the Water Department books.

We have seen that the proper amount of income from trust funds has been carried to the credit of the various accounts, in accordance with the terms of the several bequests. In the case of the cemetery funds the income from each lot-holder's deposit is carried to the credit of his individual account in the cemetery ledgers, and not on the Auditor's books, where the liability of the City for interest accrued on cemetery funds held as cash in treasury is not shown.

EXPLANATION AND COMMENTS.

The accounts of the City are kept on the same system that has been in use for many years, and while it may have been sufficient for the needs of the City at the time it was introduced, it is entirely inadequate to record properly the transactions of a city of the present size of New Bedford.

Considering the character of some of the methods, and the almost total absence of internal checks, the accounts are remarkably free from clerical errors.

We call attention to certain defects of the accounting system, not for the purpose of criticising the work of the city officers, but to point out the fundamental objection to the system, viz., that the books do not furnish the information necessary for a statement of the actual assets and liabilities of the City at any time, or of its true income and expenses.

Up to a few years ago the accounts of all cities in this country were kept on practically the system in use in New Bedford, and even now there are comparatively few municipalities which have adopted modern methods. In 1894 the National Municipal League was organized, having for its object, among other things, "to promote the thorough investigation and discussion of the conditions and details of civic administration." Under the auspices of this organization, a great deal of attention has been given to the subject of municipal accounts by city officials and by public accountants, and a system of "Uniform Accounting" has been devised, which has been adopted by law in all cities in the State of Ohio, and by a number of large cities in other parts of the country.

As far as the circumstances would permit, we have stated the results of our examination in accordance with the forms of the Municipal League.

ASSETS AND LIABILITIES.

In common with most cities, the appropriations made by the Council for the various municipal purposes form the basis of the whole system of the accounts of the City of New Bedford. It is, of course, necessary to have a record of what has been appropriated, and of the amounts expended out of these appropriations, but it is impossible to record in a proper way the transactions affecting the actual assets and liabilities of the City under a system which makes the fictitious liability of "appropriations" the basis of the accounts.

The total tax levy for any given year, as made up by the Assessors, is never taken up on the books, but only the amount of the taxes which has been appropriated by the City Council.

The Council appropriates the part of the tax levy which it is estimated will certainly be collected, and this amount is charged to "General Appropriation Account" and credited to the various departments for which the appropriations have been made.

As the taxes are collected they are credited to general appropriation account, and the disbursements of the various departments are charged to the appropriation of these departments as the money is spent.

This method of treating the accounts has the undesirable result that when the Treasurer has collected the amount of the tax levy for any year which has been charged to general appropriation account, the books show no taxes remaining unpaid, although there is always a large sum which has neither been collected nor abated by order of the Assessors.

The trial balance of the City Auditor — which is the only statement of the assets and liabilities of the City — shows on the credit side, among the liabilities, various items representing the balances of appropriations which had not been disbursed at the date of the closing of the books.

Although these balances are shown among the liabilities, they do not represent debts, or mean that the particular amount which they represent has been set aside as available for the purposes for which the appropriations were made. There is a radical difference between a trust fund, or other similar obligation of the City, and an unexpended balance of an appropriation, which represents merely an intention on the part of the Council to spend a certain amount for a particular purpose, and which can be reversed at its pleasure.

The Auditor's trial balance shows an item of "Public Property," but this balance does not include the amounts expended on buildings, schoolhouses, etc., in process of construction, nor any value for the cost of sewers, street paving, sidewalks, and other similar improvements, whether in process or completed. When buildings or other visible assets of the City are completed, they are included in the list of "Public Property," and their value—as appraised by a committee of the City Council—is taken up on the books, but the value of sewers, street

paving, etc., is never shown on the books among the assets of the City.

In the balance sheet submitted herewith we have omitted from the liabilities of the City all unexpended appropriations, and have shown as assets the uncollected taxes and the cost of buildings, etc., in course of construction.

We believe that it is the best practice to show among the assets at least a part of the cost of sewers, paving, and other similar improvements, but there was no data available from which to make up such a statement, and we have accordingly been unable to show a value for permanent improvements of that nature.

RECEIPTS AND DISBURSEMENTS.

Again following the ordinary municipal practice, the accounts of the City record simply the amount of money which actually came into the possession of the Treasurer, and the amount of the disbursements approved for payment by the Council during any given period.

Outside of municipal accounting, it is universally conceded that the income and expenses properly belonging to each period should be shown — whether the money has actually been received and disbursed or not. Within the last few years some of the more advanced municipalities have applied this principle to their accounts, and we believe that the desirability of this treatment will eventually be universally recognized.

The receipts of any given year, which are shown in the accounts of the City, include a large amount of taxes and various other items of income properly belonging to preceding years, as well as funds received from the sale of bonds and from temporary loans. The disbursements include expenses belonging to prior periods, and omit all expenses of the year in question which have not actually been approved for payment at the date of the closing of the books for that year. They also include payments made for the cost of public improvements and buildings — the funds for which are provided from the sale of bonds, and not from the ordinary revenues of the City.

There are no records giving the amount of the expenses for any given year which had not been approved for payment at the date of the closing of the books, and we have therefore been unable to show this liability on the balance sheet submitted.

In attempting to state the receipts and disbursements in accordance with the forms of the Municipal League, we have found that in many cases the classifications shown on the books do not permit of a division of the various disbursements in the detail set forth on these forms. We have, however, shown those headings which seem to be desirable for use in the accounts of the City, even though no amounts are shown against them.

OTHER ACCOUNTING METHODS.

In addition to what we believe to be the undesirable features of the general system on which the accounts are kept, there are other features which might be improved without any change in the theory of the accounts.

One of the chief functions of the Auditor's Department should be to act as a check on the transactions of the Treasurer's office; but this feature is almost entirely lacking in New Bedford. The Auditor charges to the Treasurer the amounts actually received by him, as shown by his statements, but he credits the Treasurer

with all payments which have been authorized by the City Council — without any reference to whether the money has or has not been actually disbursed. The result is that the Treasurer always has on hand considerably more money than the Auditor's books show should be in his possession.

The Assessors make a sworn statement each year, in the Tax Ledger, that "the foregoing, amounting to \$0,000,000 00, is a true list of all taxes receivable by the City." In each year examined by us the footings of the accounts themselves show an amount different from the sum so stated. This is probably due to errors of the Assessors' Department in recording the list of taxes on the Tax Ledger.

No record is made on the city books of the collection of State and County taxes, or of the payment of these amounts to the proper authorities — the record of these transactions being carried on loose memorandum sheets.

SINKING FUNDS.

The securities in the sinking fund are stated in the books of the Commissioners at their par value. Premiums and discounts on bonds purchased are charged and credited respectively to a premium account, and at the close of the year the balance in this account is transferred to interest account.

The amount of the appropriation for sinking fund requirements, made yearly from the tax levy, is entered on the books of the Sinking Fund Commissioners as a cash receipt, and the various fund accounts are credited with their respective proportions. The total of the appropriation has, however, not always been actually paid to the Commissioners. In certain years disburse-

ments have been made from the general treasury for account of the Sinking Fund Commissioners, and these payments have been deducted from the amount due the Commissioners in the final adjustments of the accounts for the year.

The accounts of the Sinking Fund Commissioners are closed as of Jan. 1st in each year, but the accounts of the City are closed at the end of its fiscal year, which is the first Monday in December. It has been the practice to state, in the city accounts, the sinking funds at the figures actually in these funds — not at the date of the city report, but at the date of the closing of the accounts of the Commissioners, nearly a month later. In the balance sheet of Dec. 7, 1903, we have shown the amount of the sinking funds which were actually on hand at that date, but in the balance sheets of the other years we have not changed the figures shown on the city reports.

WATER WORKS.

The accounts of this department are well and carefully kept, but as they record only the cash receipts and disbursements, they do not show the true income and expenses of the department from year to year.

Whatever might be thought as to the necessity of recording the true income and expenses of the City as a whole, it would seem that the accounts of the Water Works — which is in effect a business undertaking — should be stated so as to show accurately its net income each year.

At the date of the close of each financial year the department has received a proportion of the water rates for at least six months in advance, and water must be furnished to these consumers for this time without further revenue. There are also expenses due, but not paid.

As an offset to this, there may be amounts due for water used, but not paid, and there are certain materials and supplies on hand — the amount of which does not appear on the books. The present method of treating the accounts makes it impossible to determine these amounts without a great amount of labor.

All supplies purchased are charged to maintenance or construction when the money is disbursed, although the supplies may not be used until the succeeding year or later.

Shortly after the completion of the "Further Water Supply," various expenditures were made for betterments on the new pumping station and other parts of the new system, and a dwelling house was erected for the Engineer. The cost of all these improvements was charged to maintenance, and the years in which these disbursements were made show an abnormally high maintenance cost.

Section 12 of Chapter XVI of the Ordinances of the City provides that it shall be the duty of the City Treasurer, in the absence of special directions from the City Council, to apply the receipts from the Water Department to the following purposes, in the order in which they are stated:—

- 1. To the payment of its operating and maintenance expenses.
- 2. "To the payment of the interest on the water loan."
- 3. To the payment of the principal of the water bonds.

When the receipts from the Water Department have not been sufficient to meet all of these charges, it has been the practice to apply the excess over the amount necessary to pay running expenses, to the payment of the principal of the water loans, before providing for the interest on them.

TEMPORARY LOANS.

In each of the years covered by our examination, funds have been received by the Treasurer from "Temporary Loans." In each case the resolution of the Council authorizing the loan has stated that it was made in anticipation of the collection of the taxes of the year in question.

In no year since 1897 have the temporary loans been liquidated in full, and the amount of these loans outstanding had reached the sum of \$603,000.00 at the end of 1903.

As the part of the taxes necessary to liquidate these loans was not used for that purpose, but was appropriated by the Council to other uses, it might be thought to have been, in a technical sense, "unlawfully expended."

However undesirable this state of affairs may be, it is by no means peculiar to the City of New Bedford. His Excellency the Governor, in his inaugural address, stated that the majority of the cities in the Commonwealth are "unable to live inside of this limit (\$12.00 per \$1,000.00 for local purposes) and conduct their affairs as the people want them conducted," and that many of them "are obliged to make permanent loans to pay current expenses."

NEW BEDFORD AND FAIRHAVEN BRIDGE

Under the provisions of Chapter 439 of the Acts of the Legislature of 1900, it was provided that the expense of the completion of the bridge between the City of New Bedford and the Town of Fairhaven should be borne in the first instance by the City of New Bedford; and the City was authorized and directed to borrow from time to time, outside of its debt limit, such sums as might be necessary to meet the expenses of the work.

Under this authority the City has borrowed from time to time various sums on its notes, which amounted on Jan. 1, 1904, to \$425,000.00. The Act provides that the greater part of this amount shall be repaid to the City by the County of Bristol, the Commonwealth of Massachusetts, the Old Colony Railroad Co., the Union Street Railway Co., and the Town of Fairhaven.

*Since 1898 the Auditor's Report has shown \$5,000.00 of this series of Bonds as "overdue bonds unpresented." These Bonds were issued in 1875, and the record of their maturities is not clear, but it seems probable that the \$5,000.00 of Bonds, listed by the Auditor as "overdue," mature in 1909 and 1910, and we have so shown them. Coupons from these Bonds have been presented and paid each six months, and it is therefore evident that the Bonds mature at some date later than 1904.

CITY OF NEW BEDFORD.

REPORT

ON

FREE PUBLIC BATHS

FOR THE YEAR ENDING
ONE THOUSAND NINE HUNDRED AND FOUR.

NEW BEDFORD:
THE A. E. COFFIN PRESS, CITY PRINTERS.
1905.

Report on Public Baths.

CITY OF NEW BEDFORD,

December 22, 1904.

To the City Council:

GENTLEMEN: — At a meeting of the City Council Committee on Public Baths, Oct. 13, 1904, on motion of Councilman Loftus, seconded by Alderman Thompson, it was

"Voted, That the chairman be authorized to prepare a report to the City Council, and to make such necessary suggestions in the same as he may deem proper."

In accordance with this vote, the Committee herewith presents its annual report.

In preparing its report for the season of 1904, the Committee considers it wise to briefly recite the history of bath houses under municipal control in New Bedford, inasmuch as the reports of previous years are incomplete, and have not been incorporated in the City Documents.

Free public bathing in New Bedford resulted from an order introduced into the Common Council, April 1, 1899, by Councilman John Hannigan of Ward Six (the present chairman of the Committee), providing for the appointment of a joint special committee "to ivestigate and ascertain the feasibility of establishing free public baths in this city, and report as soon as possible." The order was adopted in concurrence, and a committee, consisting

of Aldermen Lawton and Ellis, and Councilmen Hannigan, Findeisen and Richards, was appointed. After an investigation the Committee reported, June 22, 1899, recommending that free public baths be established on East French avenue, and that a special appropriation of \$5,000 be made for the purpose. An order for the special appropriation of \$5,000 was adopted by the City Council in concurrence, June 22, "for the purpose of building and maintaining bath houses on Ashley's wharf on East French avenue." The spending of the appropriation was left in the hands of the Joint Special Committee which had made the investigation.

The contract for the construction of the first group of houses was awarded to J. B. Demoranville, and the houses were built at a cost of \$1530 on beach land leased from the heirs of Rodolphus Ashley, from plans and specifications prepared by Samuel C. Hunt, architect.

The houses were opened to the public in July, 1899, and immediately sprang into public favor, being resorted to particularly by the workers in the cotton mills located at the south end of the City. Of the appropriation of \$5,000 for installation and maintenance, an unexpended balance of \$2,664.27 was returned to the city treasury.

During the first season no attempt was made to supply the patrons of the houses with bathing suits, each bather providing his or her own. During the second season, 1900, a few suits were purchased and rented to bathers. This year, (1900) the sum of \$1,000 was transferred from unappropriated funds for the maintenance of the bathing houses, and of this amount \$225.52 was returned to the city treasury, unexpended. The receipts for the rental of suits was \$54.48.

On Oct. 1, 1900, Ashley's wharf and beach, on which the houses were located, were leased by the City for a term of five years, with a privilege of extension, at the rate of \$200 per annum, the lessors reserving the right to gather sea-weed from the beach.

In 1901 a transfer of \$1,000 from unappropriated funds was made for maintenance, and at the end of the season \$186.68 was returned to the city treasury. The receipts turned over to unappropriated funds, in accordance with ordinance, was \$272.76.

In 1902 a group of bath houses belonging to Siddall & Barlow, which were located on the west side of Clarks Point, on the site now occupied by the Kilburn Mill, were purchased, and, with their equipment, added to the plant, which was otherwise increased to the present capacity of 76 houses, 46 for men and 30 for women, with common rooms in each section for children. These improvements cost \$1,110.61. Of the appropriation for maintenance (\$1,000), \$11.84 was returned to the city treasury. The receipts turned over to unappropriated funds were \$308.91. The record of attendance during previous years has not been preserved. During 1902 the total number of bathers, as returned by the superintendent, was 63,589. This number included men, women and children.

In 1903 an attempt was made to carefully estimate the number of bathers, basing the count on the number of keys issued, and allowing three bathers to a house at every issue of a key, which experience showed to be a fair average. No count was made of the children who used the common houses provided for boys and girls. The return of the superintendent was 20,961 bathers. At the beginning of the year a special appropriation of \$1,000 was made for maintenance. The receipts turned over to unappropriated funds during the year were \$232.55, and that amount was transferred, by order of the City Council, to the bath house account. A transfer of \$5.53 was subsequently made by the City Auditor, to balance the account of the year, the total expenditure for the year having been \$1,238.08.

At the beginning of the present season, 1904, the Committee requested an appropriation of \$1,000, which

was granted. The need of additional houses and suits was apparent to a majority of the members of the Committee, and an effort was made to enlarge the plant. By vote of the Committee, after considerable discussion, plans for twenty additional houses were secured, and bids for the construction of the same were presented. It was voted to request the City Council for a transfer of \$1,000 from unappropriated funds to the bath house account, for the purpose of adding 20 new houses and purchasing 200 men's suits, 100 women's suits and . 300 towels. An order for the transfer of this amount failed of adoption by the Board of Aldermen, and was consequently defeated. The Committee decided that circumstances required the purchase of 300 new suits and 300 towels, and procured them. Subsequently a transfer of \$500 was made from unappropriated funds to the Committee's account, making a total appropriation of \$1,500 for the year.

The total expenditures for the year were \$1,393.78, leaving a balance of \$106.22 to be returned to unappropriated funds. The receipts for the year, from the letting of suits, etc., turned over to the City Treasurer, to be applied to unappropriated funds, were \$330.60. In addition to this amount, the sum of \$2.50 was taken from the receipts, on the authority of the chairman, by the Superintendent, for the following purposes: \$2.00 to pay for the removal of sea-weed from the beach after an unusual storm, and 50 cents to pay for lunch for the attendants on a Sunday when there was an unusual rush of bathers, and the attendants had no opportunity to go home for something to eat. The net expense of maintenance for the season was therefore \$1,063.18.

The Superintendent and Assistant Superintendent reported for duty June 6, and the houses were opened for bathers June 9th. The houses were kept open daily from 7 a.m. to 9 p.m. on week days, and from 9 a.m. to 5

p. m. on Sundays, to and including Sunday, Sept. 11, a period of 14 weeks. The woman assistant was notified to report for duty June 27, and was continued, serving from 12 m. to 9 p. m., until Aug. 28th. The presence of the regular woman attendant was greatly appreciated by the women bathers, and it removed criticism which had previously been heard relating to the presence of the men attendants in the alleys separating the houses used by women. There are times when it is necessary for an attendant at the bath houses to go to the rooms occupied by women during bathing hours, and the woman attendant, during the past season, has attended to these duties, in addition to office work and taking care of the repair of suits.

A more complete record of the transactions at the houses was attempted, the Committee feeling that the data would be valuable for the use of future committees. The data secured will be found in an appended table.

One new feature in the gathering of statistics has been introduced, the keeping of a record of the temperature of the air and water, and the condition of the weather. These figures are not only interesting, but they explain, beyond dispute, the reason for the varying attendance from day to day.

Owing to a difference of opinion among the members of the Committee as to the need for more houses and additional suits and towels, a majority of the Committee believed that the record of the year would bear out their contention that more suits and houses were needed. With the record before them, the majority of the Committee believes that more houses are needed for another season, and urges the City Council to provide them.

The purchase of 300 suits and 300 towels, at the beginning of the season, obviated the complaints which had been very frequent, especially during 1903, that

there were not suits enough on hand to supply those desiring to hire them. There are at present 575 suits (341 men's and 234 Women's) and 410 towels on hand.

As to the necessity for more houses, an understanding of the conditions is necessary for clear comprehension. As with all beach bathing, the condition of the tide is a large factor in the demand for houses. Many of the patrons of the houses are employed in the cotton mills, and work from 6.30 a.m. to 6 p.m., during the week, with the exception of Saturday afternoons. Their leisure time for using the bathing houses, therefore, is evenings, Saturday afternoons and Sundays. When it happens that there is a high tide in the early evenings of excessively hot days, or when the high tides occur on Saturday afternoons or Sundays, at any time, in short, when the combination of hot weather, tide and opportunity to bath occurs among the bulk of the patrons, the number of demands for houses exceeds the number of houses. At such times many of the patrons, rather than lose an opportunity to enjoy the exhibitanion of a plunge in the cool, refreshing salt water, "double up," as the saying is, several people using the same house. At times during the past season the attendants have reported that eight, or even ten persons, have used the same house at one time. The houses are small, and under the most favorable conditions are not large enough for more than two people at the same time, so that it can readily be seen that during the "rush" hours, which period is the true test for the capacity of the plant, the houses are far too few in number to afford reasonable accommodation for those who are entitled to use them.

It will be noted from the statistics below that there were 3,984 times during the season when houses were refused because all the keys were in use. In many cases, the Superintendent reports, those who desired houses, and had seen others refused, have not made application, knowing that there was no use in doing so, so that the

number of refusals returned by the Superintendent is but approximate, and really less than the actual demand. During the season there were 436 people who refused to hire suits because there were no houses for them to use. This represents an income of \$43.60, in dollars and cents, which might have been received had there been houses enough to go around, and it also represents a large degree of dissatisfaction which might have been avoided, had the houses been supplied.

In view of these facts, the Committee desires to urge again the need of more houses during the coming year.

So much for the past season and those which have preceded it. Looking to the future welfare of the community and the enjoyment and health of the citizens, the Committee desires to call attention to some important facts, and to offer suggestions for the consideration of the City Council.

The United States Bureau of Labor, in its Bulletin for September, 1904, contains an interesting section devoted to public baths in the United States, in which the history of the movement is comprehensively treated. The first paragraph of the introductory article, written by G. W. W. Hanger, is worth qoting here.

"For many years," writes Mr. Hanger, "the maintenance of public baths at public expense has been a feature of municipal government in the leading countries of Europe. In the United States, however, the movement for public baths has assumed importance only during recent years. The value of these institutions—from both a social and economic point of view—cannot be denied. They not only offer means to-personal cleanliness to those who can afford but meagre facilities in their homes or tenements, and thereby stimulate in a powerful way a feeling of self-respect and a desire for self-improvement among this class, but they also promote health and afford recreation. It has been urged that they

serve to ward off disease, and it is quite certain that in thus conserving the health and earning capacity of working people, their economic value must be recognized."

Volumes of words might be used to elaborate the value of public baths, but the quotation made is sufficient to direct attention to the points in favor of the establishment of all-the-year-round "cleanliness" baths in New Bedford, especially in the centres of the mill-districts, at the north and south ends of the city.

So far as the Committee is aware, there are no statistics showing the facilities for bathing in the homes of people living in the congested mill districts of this City. It seems to the Committee that a careful investigation along this line, with a report of the conditions found, would open the eyes of the people of New Bedford to the necessity of public baths from the health point alone. It is recommended that the City Council make some provision for such an investigation, which might be accomplished by the Police Department, the Board of Health, the Inspector of Buildings, or the Board of Assessors, at a small cost to the City.

If the conditions bear out the belief of those who have had some opportunity to observe, the next step is the establishment of public bath houses which shall be operated the year round, and the Committee suggests to the City Council a careful consideration of the best type of houses and equipment to be adopted. It would seem, from the knowledge at present possessed by the Committee, that a combination of shower baths with a plunge pool of sufficient size to permit swimming, would afford the most satisfaction to the people; but this, of course, is a matter for decision after a thorough investigation. The matter of location and the cost and architectural character of the construction is also a matter for consideration. An economical, but not stingy

construction and equipment, with locations selected with an idea to benefit the greatest number of people, would seem to be wise.

It is also suggested that a small fee may be charged for the use of the baths, as is done in many other cities, and that the sum realized from this source may be used to lessen the expense of maintenance, if this course is found best after investigation.

With the experience of other cities as a guide, there is little chance to make a mistake in the matter of public baths if the City Council will give the subject careful and intelligent consideration.

For the Committee,

JOHN HANNIGAN,
Chairman.

The daily record of attendance, for the season of 1904, together with a list of the City Council Committees on Public Baths, Superintendents and Assistants, by years, since the establishment of the plant to the present time, follows:

NEW BEDFORD:
THE A. E. COFFIN PRESS, CITY PRINTERS.
1905.

CITY OF NEW BEDFORD.

IN THE YEAR ONE THOUSAND NINE HUNDRED AND FOUR

AN ORDINANCE

AMENDING SECTION 35 OF CHAPTER XXII OF THE ORDINANCES, ENTITLED "STREETS AND PUBLIC PLACES."

Be it Ordained by the City Council of the City of New Bedford, as follows:

SECTION 1. Section 35 of Chapter XXII of the City Ordinances, entitled "Streets and Public Places," is hereby amended by inserting after the word "part" in the fourth line thereof, the words "or any preparation or substance designed to be exploded by the weight of a passing car or vehicle within the City of New Bedford," and by adding a new paragraph, as follows:—

No person shall place or cause to be placed upon, between, or in proximity to the rails of any street railway company, any fireworks, cartridges, torpedoes or other explosives or preparations which may be exploded by the weight of any car passing over the same, and no person shall direct, throw or explode any fireworks, cartridges, torpedoes or other preparations of an explosive or inflammatory nature at, in, over, under or in proximity to any street railway car while said car is upon any street.

Section 2. This ordinance shall take effect upon its passage.

IN BOARD OF ALDERMEN, June 9, 1904. Passed to be ordained.

LOUIS Z. NORMANDIN, Acting Mayor.

In Common Council, June 9, 1904. Passed to be ordained.

SAMUEL HIGHAM, President.

Presented to and approved by the Mayor, June 10, 1904.

A true copy, attest:

DANIEL B. LEONARD, City Clerk.

PARK ORDINANCE.

OFFICE OF PARK COMMISSION, NEW BEDFORD, MASS., JUNE 6, 1904.

The Board of Park Commissioners of the City of New Bedford, by virtue of its authority to make rules for the use and government of the public parks of said city and for breaches of such rules to affix penalties, hereby ordain that within the public parks of the city, except with prior consent of the Commissioners:

"No dogs shall be permitted on the parks." Any violation of this regulation will be subject to a penalty of \$20.

JAMES E. MOORE, CHAIRMAN, SAMUEL P. RICHMOND, OBED C. NYE, CHARLES T. SMITH, ERNEST A. WHEATON, SECRETARY,

Board of Park Commissioners.
